A	GRAMMAR	$\mathbf{0F}$	THE	JAPANESE	SPOKEN	LAN-
	GUAGE.					

THE NIHONGI; or, Chronicles of Japan from the Earliest Times to A.D. 697. Translated from the Original Chinese and Japanese.

A HISTORY OF JAPANESE LITERATURE.

SHINTO. In preparation.

INTRODUCTORY REMARKS.

In its structure, the Japanese language possesses all the characteristics of the Turanian family. It is in the main an agglutinative language, that is to say, the roots of words suffer no change,* and the results which are obtained in European languages by inflection are arrived at in Japanese by the use of separate particles suffixed to the root. the other languages of this family, Japanese has no formative prefixes such as the German GE, or the reduplication of the perfect in Latin and Greek verbs. Its poverty in conjunctions and copious use of participles instead is another point of resemblance. The Japanese language is further an example of the rule common to all languages of this family, that every word which serves to define another word invariably precedes it. Thus the adjective precedes the noun, the adverb the verb, the genitive the word which governs it, the objective case the verb, and the word governed by a preposition the preposition.

The number of vocables common to Japanese with its kindred tongues is much smaller than might have been expected. The only language which contains any con-

^{*} It may be a question whether the addition of the vowels a, i, u and e to the roots of verbs (see Chap. IV.) is agglutination or inflection. To the Japanese mind they are not distinct from the root, and a Japanese knows nothing of such forms as mat (wait), tab (eat). These vowels have no meaning in themselves. They only serve to modify the meaning of the root, and therefore the term inflection appears more appropriate. It has accordingly been used in this treatise to distinguish these changes from agglutination proper, or the addition of particles which have a distinct meaning of their own, and are recognized by those who use the language as separate from the root.

siderable proportion of words which are also found in Japanese is that spoken in the Loo-choo Islands. Loochooan is very closely related to Japanese, but Mr. B. H. Chamberlain's researches show clearly that its grammar differs so much that it cannot be regarded as a mere dialect.

The Korean language has also an affinity with Japanese. The number of common roots is apparently not considerable, but the resemblance in grammatical structure is very close.

The vocabulary of the Japanese language, as it appears in its oldest monuments, is, in so far as it is possible to judge, homogeneous. It contains only a very few of the Chinese vocables which are so plentiful in its later forms.

According to Japanese accounts, the study of Chinese was first introduced into Japan in the third century of the Christian era, when Chinese books and teachers were brought over from Korea;* but even if these accounts can be depended upon, the influence of these teachers was probably confined to the Court, and had little permanent effect. A succession of other teachers afterwards arrived from Korea, but it was not till the sixth century, when Buddhism was first introduced into Japan, that the study of Chinese became general. From this time it spread rapidly. The profane literature of China was also studied, and Chinese words began to find their way into the Japanese language. This process has gone on uninterruptedly up to the present day, and now

^{*} The old Japanese histories inform us that a teacher of Chinese called Ajiki came over to Japan from Korea A.D. 284, for which the correct date is 404. In the following year a second, named Wani, was sent for. Wani is said to have brought with him the Ron-go, or Confucian Analects, and Sen-ji-mon, or thousand character classic, but there must be a mistake about the last-named work, as it was not written till more than two hundred years later. These two scholars were subsequently made instructors to the Imperial Prince. There is, however, evidence that Chinese books were brought to Japan in the preceding reign.

the Chinese words in the language far outnumber those of native origin.

The Chinese pronunciation first adopted by the Japanese was that of the province of Go (Woo or U in Chinese). This province contained Nankin, the capital of Chine under the eastern Tsin dynasty, which began A.D. 317, and it also contained the capital of the southern of the two empires into which China was divided during the dynasties which succeeded from A.D. 420 to A.D. 589. It was the Go pronunciation that the Buddhist priests used (and continue to use) in their litanies, and the greater number of the Chinese words which found their way into Japanese in the early period of Chinese learning have come down to us with the Go pronunciation. Most of the kana are Chinese with the Go pronunciation. Most of the kana are Chinese characters pronounced according to the Go-on, or with slight modifications of it. The reason for choosing this dialect was no doubt simply because the province where it was spoken lies nearest to Japan, and was at that time the most flourishing part of the Chinese Empire. The intercourse between Japan and this part of China was considerable, and was not confined to matters of religion and learning only. Many Chinese customs and much of their civilization were adopted at the same time. To this day a draper's shop is called in Japan a *Go-fuku-ya*, or "Go-clothing-house," showing that what we are accustomed to consider the Japanese national costume was at first an imitation of the dress of Go. Japanese grammarians give as an additional reason for preferring the Go pronunciation, or Go-on as it is called, that it approached more closely to the sound of the Japanese language, and was therefore more easy of pronunciation. It is not to be supposed, however, that any Japanese, except perhaps a few scholars who visited China, ever acquired the true Chinese pronunciation. It is impossible to represent any Chinese dialect accurately by the

Japanese syllabary. English written in this way becomes almost unrecognizable, and the metamorphosis undergone by Chinese when subjected to the same process is much greater.

A second mode of pronouncing Chinese was introduced

A second mode of pronouncing Chinese was introduced into Japan not long after the *Go-on*. This is what is known as the *Kan-on*. *Kan* (in Chinese *Han*) is the name of the celebrated dynasty which ruled in China during the period from B.C. 206 till A.D. 265. Under it flourished the greatest literary men that China has produced, and even at the present day the Chinese are proud to call themselves "sons of *Han*."

In a number of expressions Kan is used by the Japanese as equivalent to "Chinese." Thus, Kan-seki are Chinese books; Kam-bun, Chinese composition; Kan-go, a Chinese word; Kan-gaku, Chinese learning, &c. In the term Kan-on however, the word Kan has a narrower signification. The Kan-on was the dialect which continued to be spoken in the province of Honan which had contained the seat of the government of the Han dynasty. It was the most refined and cultivated language of China at this period, and occupied a position similar to that now held by the so-called Mandarin dialect. It was recognized as the standard pronunciation by the Chinese teachers from G_0 , although they spoke and taught their own dialect; and even the Buddhist divines, who did more than any other class of scholars to establish the Go-on, did not altogether neglect the study of the Kan-on. The Go-on had become widely adopted before much attention was paid to the Kan-on. The latter was, however, recognized as the standard, and succeeded gradually in establishing itself as the more usual pronunciation of Chinese words. is now, except in rare cases, the only one given in Japanese dictionaries of the Chinese character, but a multitude of words is still pronounced according to the Go-on. The Kan-on often coincides with the Go-on, but it is as frequently widely

different, and the use of these two systems of pronunciation has therefore given rise to considerable confusion. In the case of the more ancient $neng\hat{v}$, or names of periods, and of the names of the Mikados, it is often doubtful which is the correct pronunciation, and in many cases either may be followed at pleasure.

The modern official Chinese language is called by Japanese the $T\hat{o}$ -in. $T\hat{o}$, in Chinese Tang, is the name of the dynasty which flourished in China from A.D. 618 to A.D. 906, but this word is used by the Japanese for China and the Chinese nation generally. A Chinaman is popularly called $T\hat{o}$ -jin, and $T\hat{o}$ -in means simply the modern Chinese as opposed to the Japanese traditional pronunciation. The $T\hat{o}$ -in has been generally adopted in the case of a very few words only, as tor instance H, which is pronounced Min (Chinese Ming) when the dynasty of that name is meant. It is also the pronunciation used in their litanies by the branch of the Zenshiu sect of Buddhists known as the $\hat{O}baku$ ha. The $\hat{O}baku$ ha was founded by missionaries from the monastery of $\hat{O}baku$, in China, who came over to Japan A.D. 1692, and established themselves at Uji, not far from Kiôto. Like the Go-on and Kan-on, the $T\hat{o}$ -in differs considerably in the mouths of Japanese from the true Chinese pronunciation.

The accents are neglected in the present Japanese pronunciation of Chinese words. There are, however, some traces of them to be found in the spelling. Where the same character has two different accents, the spelling usually varies, and the characters which have the entering accent in Chinese may be recognized from the Japanese spelling ending in tsu, chi, ku, ki, or fu.

Chinese words can generally be easily distinguished from those of Japanese origin. They end much oftener in diphthongs and in the letter n, and are usually associated in twos or threes, so that when one is known to be Chinese the

others may be presumed to be so also. Another aid to their recognition is the fact that in Japanese syntax they are always treated as nouns. There are, however, a few cases in which genuine Japanese words have assumed an appearance which makes them hard to be distinguished from Chinese. For instance sata, though really a Japanese word, identical with the root of sadaka, sadameru, &c., is usually written with the Chinese characters 沙 汰, and in this shape it has all the appearance of a Chinese word. On the other hand, a good number of Chinese words which were introduced in the early days of Chinese learning have become so thoroughly assimilated that they might easily be mistaken for Japanese words. Such are zeni (cash), which is only another form of sen ப semi (cicada) for sen 蟬, enishi (connexion) for en-shi 線, fumi (letter) for fun 文.

During the fourteen centuries over which our knowledge of the Japanese written language extends, its grammar has suffered but little change,* and such modifications as it has undergone have been slow and gradual. There is no gap between ancient and modern Japanese like that which divides Latin from Italian, or even that which separates the English of the period before the Norman conquest from that now spoken. Such changes as have occurred consist chiefly in the disuse of certain particles and terminations, in modifications of the meaning and use of others, and in the

^{*} The grammatical structure of the Japanese language is looked upon by native writers as an institution of Divine origin, and they attribute to this cause the substantial unity which it has maintained throughout its entire history. Heretical views of grammar, or bad grammar, are therefore a very serious matter in Japan. Amatsu oho mi kami no mi tsutahe ifu ni shi habereba, sono okite ni tagahi ayamaru koto ha mi kum wo kegashi-tatematsuru no tsumi fukak' arubeshi. "Grammar having been handed down to us from the great and august gods of heaven, errors contrary to their ordinances must be a heinous crime, casting disgrace upon our august country."

disregard, to some extent, in the later forms of the language

of the rules of syntax of classical Japanese.

The progress of these changes marks three stages in the history of the Japanese language. Ist, that of development, extending to about A.D. 900; 2nd, that of maturity, including the four following centuries; and lastly, that of

decay, extending from A.D. 1300 up to to the present time.

The latter half of the eighteenth century and the first half of the present witnessed a brilliant revival of the study of the old language, and it may be doubted whether Japanese has not attained a higher degree of perfection in the archæological and philological works of Mabuchi, Hirata, and more especially Motowori, than even in the golden age of its literature. But it is to be feared that this is no more than an eddy in the main current. The old language is at present falling more and more into neglect, and the faculty of writing or even understanding it is becoming rarer every day. Its use is confined to learned treatises far removed from the daily concerns of life.

The style most in vogue at present (and used in official documents, newspapers, &c.) is modelled on literal translations of Chinese books. It is charged with Chinese words, idioms, and constructions to such a degree that, whether read or written, it is often entirely unintelligible to an unlettered Japanese, and its grammar is only a skeleton of the luxuriant system of the older language. [See specimens VII., VIII., and IX. at the end of this volume.]

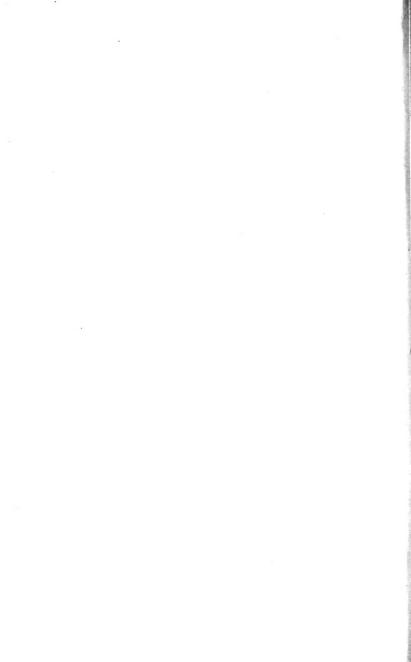

The modern popular written language occupies an intermediate position between the old language, of which it is the true offspring, and the mongrel Chinese type just described. It is looser in its syntax and poorer in grammatical appliances than the former, but it has enriched its vocabulary by a liberal adoption of Chinese words. The Chinese element is, however, confined to the vocabulary, and there are few traces

in this style of Chinese idioms and constructions. Books addressed to the unlearned class—such as novels, tales, the romances which take the place of history and biography to all but scholars, a certain proportion of the popular poetry, &c.—are composed in this style.

The spoken dialect of Japan differs so considerably in its grammar from the written idiom that it almost deserves to be regarded as a new language. Its position is not unlike that of Italian in the middle ages, when it was only a spoken dialect, the language used for literary purposes being exclusively Latin. The difference, however, is much less in degree than in the case of Italian and Latin. The principal characteristic of the spoken language is a tendency to pass from the agglutinative into the inflectional stage of development, many suffixes which are in the written language distinct from the root being in the spoken dialect blended with it in such a way that the separate elements can no longer be distinguished except by the scholar. For instance, where the written language has shimahi-tari, the spoken has shimatta; for the written form ari-tari-keri, the spoken dialect has attake; for ara-mu. arô; for kata-ku, it has sometimes katô, and so on.

Among these various forms of Japanese, the classical literary language of the tenth, eleventh, twelfth, and thirteenth centuries has been selected as the most suitable standard for grammatical purposes, and such differences as the other forms of the language present have been noted as variations from it. The spoken dialect, however, differs so considerably from any of the written forms that it has been found more convenient to exclude it from the scope of the present work, and to make it the subject of a separate treatise.

A considerable portion of the literature of Japan is written in the ancient classical Chinese language which is still employed to a small extent. There seems, however, every reason to believe that it will soon share the fate of Latin in Europe, and fall entirely out of use except for a few purposes of a special character.

CHAPTER I.

WRITING, PRONUNCIATION, ACCENT, LETTER-CHANGES.

The origin and history of an alphabet, which in several forms has been found inscribed on certain ancient scrolls deposited in the treasuries of Japanese Temples, have been a fruitful subject of controversy amongst native scholars. Some have maintained that these letters, which they call the *Shindaiji*, or "letters of the age of the gods," are of vast antiquity, but it is now admitted that they are nothing more than the Korean script known as *Onmun*, invented by a king of that country towards the middle of the fifteenth century, and actually in use there at the present day.

Japanese is written by means of Chinese characters both in the square (see I., II., VII., and VIII. of the specimens at the end of this volume) and cursive (see specimens IV., V., and IX.), and also in several intermediate forms. The order is the same as that of Chinese, viz., from top to bottom in columns proceeding from right to left.

In writing Japanese, a Chinese character may have one of four different values

- I. It may be the equivalent of a Chinese word (on or koe).
- 2. It may be the equivalent of the synonymous Japanese word (kun or vomi).
- 3. It may represent the mere sound of the Chinese word (*ji-on no kana*).
- 4. It may represent the mere sound of the Japanese word (kun no kana).

In the two former cases a Chinese character has an ideographic value; in the two latter it has a phonetic value. When used in the former capacity, Chinese characters are

termed by Japanese writers mana; when used in the latter capacity, they are called kana. Mana means "true name," implying that this is the true use of a character, while kana (contracted for kari-na) means "borrowed name," as in this case the mere sound of a character is "borrowed" in order to express the whole, or more frequently only a part of a word unconnected with it in meaning.

Every Chinese character may be used as the equivalent of a Chinese or of the synonymous Japanese word, and a considerable number of them are also occasionally employed phonetically. For example, \mathcal{K} (heaven), may be equivalent to (1) the Chinese word ten, (2) the Japanese word ame, or (3) the mere sound te or ten. \mathcal{K} is not used for the mere sound te or ten and te (heaven). An instance of a Chinese character used to represent the mere sound of a Japanese word is ten, which is used for the sound te ten (4), as well as for the Japanese word te ten ten

In the oldest Japanese writing, the Chinese characters are generally *mana*, and have their ideographic value. The *Kojiki*, for instance, is written principally in *mana*, as are also the *norito*, or ancient Shintô prayers. Specimen I. (from the *Kojiki*) at the end of this volume is an example of this stage of Japanese writing. It will be observed that the Chinese order of the characters is followed, and it might perhaps be

^{*} This may be illustrated by the following example of the results which would have taken place had the Roman numeral signs been made use of in a similar way in writing English:—"On the IIICenary (1) a C (2) times I C (3) him to you, although it tC (4); i.e., "on the tercentenary a hundred times I sent him to you, although it thundered." Here C has first its proper meaning, and represents the Latin word cent. (a hundred); second, it has its proper meaning, and represents the English word "hundred"; third, it represents the Latin sound cent only, the meaning being different; fourth, it represents the English sound hundred, the meaning being different.

suspected that the *Kojiki* was intended as Chinese, and not as Japanese at all. The authority of Motowori, however, is against such a supposition, and he has even given us a restoration in *Kana* of the entire text, as he conceives it to have been originally read. In the *norito*, the characters are written in their Japanese order.

But even in this early stage it was occasionally found necessary to give the Chinese characters a phonetic value, in order to write Japanese proper names of unknown or doubtful derivation, and other words or particles for which there were no convenient Chinese equivalents. Besides, in the case of poetry, mana could only give the meaning, whereas with kana, not only the meaning, but the precise words and particles used could be expressed, and consequently the metre rendered discernible. These causes gradually gave rise to a more extended use of the Chinese characters as mere phonetic signs. The poetry in the Kojiki is written in kana, and in the Manyôshiu, a collection of poems extending over the period from the fifth to the ninth century, a gradual increase in the proportion of phonetic signs is plainly observable.

At this period the analysis of the sounds of the language into forty-seven syllables had not been made, and inasmuch as many different characters were used not only for each of these forty-seven sounds, but also for many of a composite nature, great confusion resulted, much of which is now avoided by the use of the alphabets, or rather syllabaries, known as the *Katakana* and *Hiragana*. There is some doubt respecting the exact date of their first introduction, but it is known that both had come into general use by the end of the ninth century of our era.

The *Hiragana* syllabary can hardly be called an invention. It consists simply of abbreviated cursive forms of a limited number of the more common Chinese characters. This syllabary consists of forty-seven syllables, but each syllable

is represented by several characters, and as some of these are written in several different ways, the entire number of signs amounts to about three hundred.

The Katakana syllabary is of a more artificial character. It consists, like the Hiragana, of forty-seven syllables, but there is only one sign for each. Most of the Katakana characters are abbreviated forms of Chinese square characters, one side (kata) or a part being taken to represent the entire character. Thus λ (i) is an abbreviated form of Ξ , Π (ro) of Ξ , and so on.*

Modern Japanese writing is an intermixture of Chinese characters used as ideographic signs (mana) with Katakana or Hiragana. The proportion in which these elements are combined varies greatly, and is different even in different editions of the same book, words which are at one time represented by mana, being at another expressed by means of Katakana or Hiragana. In other respects, too, there is great irregularity. The following rules are therefore subject to numerous exceptions:—

- I. Mana are used for all words of Chinese origin, and for the roots of the more important Japanese words (na and kotoba).
- 2. Katagana and Hiragana are used for grammatical terminations, and for the less important words of Japanese origin (teniwoha).
- 3. Katagana or Hiragana are often found, as in Specimen VI. at the end of this book, written to the right of a Chinese character, to represent phonetically the Chinese or Japanese word to which it is equivalent. They may also be written to the left, as in Specimen III., but this is less common.

^{*} It is a curious fact, that notwithstanding its greater simplicity and convenience, the lower classes of Japanese are unacquainted with the *Katakana*, and even scholars prefer the *Hiragana* for most purposes.

- 4. *Katakana* are found with the square form of the Chinese character (see Specimens I., II., VII., and VIII.); *Hiragana* with the cursive form (see Specimens IV., V., and IX.).
- 5. Katakana are occasionally employed amongst Hiragana in writing interjections, foreign words, and also where italics would be used in English.

The pronunciation of the *Katakana* and *Hiragana* is not always identical with that of the characters from which they are derived. $\bar{\tau}$ and τ , for instance, are pronounced te, although derived from τ , which has the sound ten.

The Katakana and Hiragana are arranged by native grammarians in two different orders. That in popular use is styled iroha, from its first three letters. In this arrangement the forty-seven sounds constituting the syllabary have been made into a line of doggrel verse as an aid to the memory. The following table (Table I.) exhibits the Katakana and Hiragana arranged in this manner. The first column contains the English pronunciation, the second the Katakana with the Chinese characters of which they are abbreviated forms, and the remaining columns the Hiragana letters. together with the Chinese square characters from which they are derived. In this table the Hiragana letters are arranged in order of their most frequent occurrence, those in the first space being far more frequently met with than the others. It is this variety which is given in native educational works and taught in schools, and at first the student had perhaps better confine his attention to it.

The arrangement given in the following table (Table II.) is usually preferred by native scholars to the iroha. Here the syllabary (in the Katakana form) is arranged after a more scientific method, those syllables which contain the same vowels being arranged in upright columns, and those containing the same consonants in horizontal columns. It will be observed that this table contains fifty letters.

TABLE II.

	Vowel.	К	s	Т	N	Н	M	Y	. R	W
A	P	カ	. #	夕:	ナ	7.	マ	ヤ	ラ	ウ
Λ	a	·ka	sa	ta	na	ha	ma	ya	ra	wa
I	1	*	シ	4	=	۲	17.	(b	ני	共
1	i	ki	shi	chi	ni ·	hi	mi	yi	ri	1
U	37	7	ス	'n	ヌ	フ	1	2	ル	1
	u	ku	su	tsu	nu	fu	mu	yu	ru	wu
·E	工	ヶ	セ	テ	子	^	メ	K	V	工
	е	ke	se	te	ne	he	me	ye	re	e
0	Å	2	ッ	ŀ	1	此	€	3	P.	7
	o	ko	so	to	no	ho	mo	yo	ro	wo

Amongst these, however, the three letters which have circles drawn round them are not in use, and have only been introduced in order to fill up the breaks in the series.

The reason why no letters are required for yi and wu is no doubt the close affinity of y and i and w and u, which renders y and w almost inaudible in this combination. Yv is equal to yi+a, and the same remark is therefore applicable to it as to yi.

N final is omitted from the second Table. It is properly not a Japanese letter, the termination of the future, which is nearly the only place where it is found in Japanese words, having been anciently not n, but mu. It sometimes represents an r which has been assimilated to an n or m following.

The Japanese language does not possess the sounds si, ti, tu, or hu. For si it has shi; for ti, chi; for tu, tsu; and for hu, fu.

 \neq and π , though belonging to the w column, are not pronounced wi and we, but i and e. No doubt the original pronunciation was wi and we. IVo(7) was formerly considered one of the a(7)i(1)u(2)e(2) series, and o(1)e(2)e(2) was placed along with wa(7)i(4)wu(1)e(2). Motowori corrected this error, but it is still found in many Japanese books. The $Wakun\ Shivori$, for instance, follows the old practice.

It will have been observed that the preceding Tables do not contain the letters g, z, j, d, b, and p. Neither the *Hiragana* nor the *Katakana* originally provided any means of distinguishing the syllables commencing with these letters from those beginning with k, s, sh, t, and h, and there are many old printed books in which the distinction is not marked. The passage at the end of this volume, taken from the *Takctori Monogatari*, is in example of this practice. The diacritic mark (N) known as the *nigori, placed to the right of the letter, is now made use of for this purpose. It is the same for both *Hiragana* and *Katakana*. The letter p had no existence in the older form of the language. It is now marked by a small circle (°), called the han-nigori, written to the right of those kana which commence with h or f. The

^{*} Nigori means "impurity." It is opposed to sunti (purity), the term used in speaking of the unchanged sounds. An old form of the nigori, now little used, is \mathfrak{D}^{00} , as \mathfrak{H}^{00} (ga). The nigori is often omitted, even at the present day.

use of these marks will be best understood from the subjoined table:—

{ カ ガ	ka ga		ki gi		ku gu		ke ge		k o go
{ サ (ザ	sa za		shi ji		su zu		se ze		so zo
タダ	ta da		chi dji		tsu dzu	-	te de		to do
\ \ \ \ \ \ \ \ \ \ \ \ \ \ \ \ \ \ \	ha ba pa	۲,	hi bi pi	ブ	fu bu pu	~"	he be pe	ボ	ho bo po

OTHER MARKS USED IN WRITING.

1 (Katakana) or 3 (Hiragana) for koto, a "thing or action." This sign is also used, more especially in the forms or 1, to mark the beginning of a speech or quotation—thus 1. In this position it stands for koto, in the sense of kotoba, "words." In dramas it marks the beginning of the prose speeches of the actors,

E is also used for koto. It is a combination of the

Hiragana Z and E.

友 or 皮, said to be a form of 上, is used for a Chinese character when repeated a second time, as 元 ichi-ichi, "one by one."

(with Katakana) and (with Hiragana), said to be a'so abbreviated forms of **L**, are put for the repetition of a word

of more than one syllable, as h hito-bito, "men;" t mate (mate, "wait! wait!"

o and are marks of punctuation, but they correspond not so much to our periods and commas as to the rhythmical pauses made by the Japanese in reading. They will be found very unsafe guides to the structure of a sentence.

O marks the beginning of a chapter or section. —, which is merely the character *ichi*, "one," marks the beginning of shorter divisions than O. It is often put where "item" might be used in English. A document, the sections of which are marked in this way, is called a *hitotsu-gaki* or "one-writing."

is the equivalent of the English [] or ().

marks the end of a paragraph.

It is for h + toki, "time."

नं is also used for toki, "time."

压 is for 下 モ tomo, "although."

Z is put for gozaru, "to be."

 \pm is written for tama, the first two syllables of tamafu, the honorific auxiliary verb.

≯ is put in Katakana for shite, "having done."

One or two lines drawn to the right of a word or character have the same effect as italics or capitals in English printing, as $\frac{\pi}{2} \begin{bmatrix} 3 \\ 1 \end{bmatrix}$.

The same effect is produced by a line drawn round a word or letter, as $rac{5}{\nu}$.

A is put for goza, the first two syllables of gozaru, "to be." It is for masu, the polite termination of verbs in the spoken language.

In writing or printing Japanese, the divisions between the words of a sentence are not marked by corresponding spaces between the letters, as in English. The *Katakana* are written distinct from each other, but there is nothing to show where one word ends and another begins, while in *Hiragana* the letters are joined to each other or spaces left between them, entirely according to the caprice of the writer, and with no reference to the natural divisions of the words.

Japanese printing is in most cases an exact imitation of the written manuscript, the paper being pasted on the blocks which are then cut out, thus making a facsimile of the writing. This is, of course, impossible with moveable types, the use of which has lately spread extensively, but even in their case no spaces are left to show the divisions between the words, as in European printing.

PRONUNCIATION.

a has the sound of a in father.

i " " " " i " machine.

u " " " " oo " book.

e ,, ,, ,, ey ,, they.

o ,, ,, ,, ,, so.

U frequently becomes i after sh, j, or ch in the Yedo pronunciation of Chinese words, as shuku, which is pronounced shiku.

The consonants have the same sounds as in English, except in the following cases:—

S, Sh.—Se and shi are the Yedo pronunciation. In some provinces these syllables are pronounced she and si.

Ji, the nigori of shi, is pronounced exactly like dji, the nigori of chi. A different spelling has been adopted in order

to preserve a mark of the different origin of these two letters. Zu and dzu are also often confounded, especially by natives of Yedo.

T, D.—The pronunciation of these letters differs slightly from the English sounds. In English the tip of the tongue touches the palate; in forming the Japanese sounds it is pressed more forward against the teeth.

H, F.—In the Yedo language the pronunciation of these letters resembles the English, except that in producing the Japanese sound represented by f, the under lip does not touch the upper teeth, but only approaches them, the result being a kind of strongly aspirated wh. In the west of Japan all this series of aspirates is pronounced f, not h. Hizen is called Fizen; Hirado, Firando, and so on. In the vulgar Yedo dialect hi is almost undistinguishable from shi.

R.—Especially before i, r differs considerably from the English sound. The true pronunciation can only be learnt

from a native of Japan.*

The pronunciation of combinations of Japanese letters in some cases differs considerably from that of the letters taken separately, and in order to be able to read Japanese books as they are read by the Japanese themselves, it is necessary to know not only the sound of each letter when taken separately, but also the changes which its pronunciation undergoes in these cases.

Au, afu, ou, ofu oo, oho, and ovo are pronounced \hat{o} ; and eu, efu, eo, and eho are pronounced $i\hat{o}$ or $y\hat{o}$. Thus sofu, (to associate) is pronounced $s\hat{o}$; Ohosaka is read $\hat{O}saka$; sen-sou (a battle) is pronounced $sen-s\hat{o}$; efu (to get drunk), $y\hat{o}$, and so on.

^{*} The Japanese r is a medial, and not an aspirate. It is formed in the same way as d, except that the tip of the tongue touches the roof of the mouth further back than in pronouncing that letter. Some Japanese make it almost j.

The latter part of this rule is in reality only a particular case of the former. In Japanese etymology, e is equal to i+a. Eu is therefore $i \, a \, u : i.e.$, by the first part of the rule $i\hat{o}$ or $y\hat{o}$. This explains some apparent difficulties in Japanese pronunciation. Teu, for instance, is pronounced $ch\hat{o}$, te u being equal to $ti \, a \, u$, i.e., $chi \, \hat{o}$ or $ch\hat{o}$, t changing to ch before i, and au being contracted into \hat{o} . A similar analysis will show how it is that defu is pronounced $dj\hat{o}$; sefu, $sh\hat{o}$; and heu, $hiy\hat{o}$ or $hy\hat{o}$.

Exception I: In the terminations of verbs *afu ofu* are by most Japanese read *aii oii*.

Exception 2: In some words of native origin, *afu* and *ofu* are pronounced as written, for example—*afureru*, to overflow; *hofuru*, to slaughter.

U.—In pronouncing Chinese compounds, the first part of which ends with the letter ku, and the second begins with k, the u is lost, as in moku-kon, which is read mokkon. The vowels of the syllables tsu and chi are lost before a t following. Chi is in such cases written tsu, as in motsute (pronounced motte) for mochite.

G.—At the beginning of a word, g is the English g hard, but when it comes after other letters it has, in the Yedo dialect, the sound of ng in ring, as in Nagasaki, which is pronounced Na-nga-saki. In the genitive particle ga, g has also this sound. In the western dialect, g is in all cases the English g hard.

Tsu.—In modern Japanese and in Chinese words, tsu, except when it begins a word, is usually assimilated in pronunciation to a k, s, or p following. Thus shitsu-so is read shisso; satsu-shari, sasshari; shutsu-kin, shukkin; Nitsu-pon, Nippon, &c. This has caused tsu to become regarded as a mere phonetic sign of the doubling of a letter, and it is not unfrequently used by modern writers when the doubling has resulted from the assimilation of other letters

than tsu. Thus, tattobu is written tatsu-tobu, instead of tafu-tobu; hossuru is written hotsu-suru, instead of hori-suru. In Hiragana texts a Katakana tsu is occasionally used for the same purpose. Something of the kind is needed, for it is often difficult to determine whether the tsu has its proper sound or is assimilated to the following letters. The only rule which can be given is that tsu is usually assimilated in Chinese words and in the most modern form of Japanese, but not in the older language.

H, F.—Except at the beginning of a word, the aspirates h and f are lost in pronunciation. Ha becomes wa; hi, i; fu, u; he, e; and ho, o. It is this loss of the aspirate which enables fu and ho to form a crasis with the preceding vowel, as shown above.

The particle *ha* is pronounced *wa*, and *he*, *e*, as they are considered to form part of the word to which they are joined.

The aspirates are sometimes omitted even in writing. Thus we find *iu* for *ifu*, "to say"; *shimau* for *shimafu*, "to finish." This practice should not be imitated. The old language never has a syllable beginning with a vowel, except at the beginning of a word.

N.—Before m, b, and p, n is pronounced m.

TRANSLITERATION.

In the first edition of this work, the rule adopted in spelling both Chinese and Japanese words in Roman letters was to give as nearly as possible the actual Yedo pronunciation of the entire word, irrespective of its spelling in Japanese kana. This method has been retained in so far as Chinese words are concerned, for in their case nothing is gained in a work like the present by an adherence to the Japanese spelling. In the case of Japanese words, however, the native spelling represents a more ancient pronunciation, and a

knowledge of it is indispensable for etymological purposes. It has therefore been thought advisable, in the present edition, to represent the spelling rather than the pronunciation, and each letter of the Japanese syllabary is consequently in all cases written with the same Roman letters, viz., those placed opposite to it in the foregoing tables. The preceding remarks on the modifications undergone by some letters when combined with others will enable the student to infer the actual pronunciation, and, for example, to read sofu, $s\delta$; Nagasaki, Na-nga-saki; matsutaku, mattaku, &c.

LETTER CHANGES.

The letter changes which Japanese words have suffered in the course of time have, in the majority of cases, not affected their spelling, which continues, as is so often the case in our own language, to represent the ancient pronunciation. These changes have been pointed out under the head of "Pronunciation," but those of this class which have found their way into the spelling, together with the changes due to the action of euphonic laws in derivation and composition, are still to be noticed.

Changes of Vowels.

Elision.—The *u* final of adjectives, and of the negative particle *zu*, is elided before the initial vowel of the verb *aru*, "to be." Thus, *nakare* is written for *naku are*, *nagakari* for *nagaku ari*, *arazaru* for *arazu aru*.

Other examples of the elision of a vowel are:-

Tari for te ari.
Tarahi, "a wash-hand basin," for te arahi.
Zaru for zo aru.

Kakari for kaku ari.

Sasageru, "to offer," for sashi-ageru.

Nari for ni ari.

Tari for to ari.

Mare for mo are.

Ariso, "a reef," for ara iso.

The vowels of the syllables mi, mu, mo, and ni are often elided, the remaining consonant being then represented by the letter ν , which, as above observed, is pronounced n or m, according to the letter which follows it.

Examples:-

Ason, "a noble of the Court," for asomi.

Inbe, a man's name (pronounced Imbe), for Imibe.

On, the honorific particle, for omi.

Kindachi, "nobles," for kimi-tachi.

Kanzashi, a hair ornament, for kamisashi.

Nanji, "you," for namuchi.

Nengoro, "kindly," for nemokoro.

Hingashi, "east," for himukashi.

Nanzo, "what," for nani zo.

Ikan, "how," for ikani.

Aphaeresis.—In the older language, a hiatus was inadmissible in the middle of a word. It was therefore necessary, whenever the second part of a compound began with a vowel, either to elide the final vowel of the first part of the compound, as in some of the examples quoted above, or else to remove the initial vowel of the second part. The following are examples of the latter course having been taken:—

Kamutsumari for kamu-atsumari, "an assembly of gods." Towomari (pronounced tômari) hitotsu for towo amari hitotsu, "eleven."

Akashi (name of place) for Aka ishi. Ogata (name of place) for Oagata.

Crasis.—I followed by a becomes e in the termination eri of the perfect, the e being here the result of a crasis of the i final of the root of the verb, and the initial a of the verb aru,

"to be." An instance of a somewhat similar crasis is *nageki* "lament," for *naga iki* (lit. long breath).

An irregular crasis is that of the words to ifu, which are sometimes written teu (pronounced $ch\hat{o}$).

Other Changes of Vowels.

U.—In a few words u has been introduced in order to give the syllable a fuller sound, as—

Maukeru (pron. môkeru) for makeru, "to provide."

Tauberu (pron. tôberu) for taberu, "to eat."

Yauka (pron. yôka) for yaka, "eight days."

Shikau shite (pron. shikô shite) for shika shite, "thus," "therefore."

An *u* of this kind is occasionally introduced into Chinese words. For instance, one pronunciation of 住官, usually read sakwan (a clerk in a government office), is sô-kwan, i.e., sau-kwan.

An u in the old language has not unfrequently become o in the later times, as sodachi, "bringing up," for sudachi; no, "a moor," for nu.

Where the first part of a compound ends in e, this vowel in a considerable number of cases becomes changed into a.

Examples:-

Kana-mono, "a metal fastening"; from kane, "metal." and mono, "a thing."

Saka-mori, "a drinking bout"; from sake, "rice beer," and mori, root of moru, "to fill."

Da-bi, "a torch"; from te, "the hand," and hi, "fire."

Muna-gi, "a roof tree"; from mune, "the breast," and ki, "a tree."

Manako, "the pupil of the eye"; from me, "the eye," no, the possessive particle, and ko, "a child," "something small."

In a few cases i, in the same position, is changed into o, as konoha, "leaves of trees," for ki no ha; honoho (pron. $hon\hat{o}$),

"a flame," for hi no ho (lit., "an ear of fire"); hotaru, "a fire-fly," for hi-taru, "that which drops from it fire."

Attraction.—The tendency to assimilate the vowels of successive syllables, which is common to the Japanese language with the other branches of the same family, has been termed attraction. In Japanese its action is comparatively limited. The following changes of vowels are probably due to this tendency.

Shira-ga "white hair," for shira-ke.

Otodoshi, "the year before last," for atotoshi.

Ago ohokimi, "my great lord," for aga ohokimi.

The pronunciation of ou as δ (see page 20) is also no doubt due to attraction.

The letters i and u are closely allied to each other in Japanese. It has been already observed at page 19, that in Yedo the u of Chinese words is in many words pronounced i. A few Japanese words are spelt indifferently with either letter, as iwo or uwo, "a fish"; iroko or uroko, "a fish scale"; itsukushimu or utsukushimu, "to love." The spoken language has iku for yuku, "to go"; and in some places ibi is heard for vubi, "a finger,' and iki for vuki, "snow."

Changes of Consonants.

Nigori.—The most familiar change of consonants is the substitution for a pure (i.e., hard) consonant (viz., k, s, sh, t, ts, ch, or h, f), of the corresponding impure (or soft) consonant (g, z, or j, d, or dz, and b or p). [See above, page 21.] This occurs when the word beginning with a pure consonant is made the second part of a compound. The introduction of the nigori (i.e., impurity) is not universal in such circumstances, and there is much irregularity with regard to it, the same compound being pronounced by some people with the nigori and by others without it, as for instance the name of the city Ohosaka, which some pronounce Ôsaka, others Ôzaka.

The following rules will serve as a partial guide to its use.

- I. In forming compound verbs, the first element of which is also a verb, the *nigori* is not introduced. Ex.: Sashi-hasamu, shime-korosu, hiki-toru.
- 2. The initial consonant of the second element of most compound nouns takes the *nigori*. Ex.: *Jô-bukuro*, "an envelope," for *jô-fukuro*; warahi-gusa, "a subject of laughter," for warahi-kusa; kana-bumi, "a writing in kana," for kana-fumi.

The same change takes place in many Chinese compounds. Ex.: $K\hat{o}$ -zui for $k\hat{o}$ -sui, "an inundation"; ku-doku for ku-toku, "merit"; han- $j\hat{o}$ for han-sh \hat{o} , "prosperity."

The initial consonant of the second part of the reduplicated plural of nouns (see below, Chap. III.) almost invariably takes the *nigori*. Ex.: Sama-zama for sama-sama, "all sorts of"; shina-jina for shina-shina, "articles of various kinds"; hito-bito for hito-hito, "men."

4. Teniwoha suffixed to the perfect and to the negative base take the nigori; those suffixed to other forms do not. Ex.: Yuke-ba, yuka-ba, yuki-te, yuki-shi, yuku-tomo. In the case of compound nouns, whether a consonant takes the nigori or not is greatly determined by euphony. Thus in abura-tsubo, "an oil-bottle," the nigori is no doubt omitted in order to avoid the ill-sounding combination abura-dzubo. It is also for the sake of euphony that in Japanese words an ν (n or m) almost always causes the following consonants to take the nigori. Ex.: Kindachi for kimitachi, "nobles"; tsumindo for tsumi-hito, "a criminal"; karonzuru for karomisuru, "to make light of," "to despise"; fude for fumi-te, "a pen"; himukashi, "east," which has become first hingashi and then higashi. Chinese words are subject, though to a less extent, to the same tendency. For examples see the list of auxiliary numerals.

The letter p, which is incorrectly described by Japanese

grammarians as the han-nigori (half nigori) of h and f is entirely foreign to the older Japanese language. It is only found in Chinese words and in the present spoken dialect of Japanese, in the latter of which cases it is usually the result of the assimilation of a preceding consonant to the inital h or f of the second part of a compound. Ex.: Hap-pô for hachi-hô, "on all sides"; seppuku for setsu-fuku, "disembowelment"; hitsu-paru (pron. hipparu) for hiki-haru, "to pluck"; tsutsu-pari (pron. tsuppari) for tsuki-hari, "a prop."

In some Japanese words a double p seems simply to have taken the place of an older h or f. Thus, yahari, "still," has been strengthened into yatsu-pari (pron. yappari); ma-hira,

"humbly," into matsu-pira (pron. mappira).

In Chinese words an m or n at the end of the first part of a compound has often the effect of changing the initial h or f of the second part into p. Ex.: $Nam-p\hat{u}$, "an adverse wind," for $nan-f\hat{u}$; mam-puku, "full stomach," for man-fuku; dampan, "a negotiation," for dan-han.

There are a few Japanese words beginning with p, but they

are all onomatopoetic words of recent origin.

Japanese grammarians maintain that the *nigori* is in all cases the result of some such changes as have been described above, and that it had no existence in the original form of Japanese words; but this opinion can hardly be sustained, in view of the numerous words which begin with b, d, g, j, &c., a fact for which they offer no explanation.

Assimilation of Consonants to succeeding Consonants.

The most ancient language had no double consonants, and consequently no assimilation. In the stage of the language represented by the *Genji Monogatari* and similar works, there are frequent instances of the assimilation of r to an m or n following, as arazan nari for arazaru nari, bekam mereba for bekaru mereba, sakan-naru for sakarinaru, kudan no gotoku

for *kudari no gotoku*, &c. This m or n is usually written to the right and in Katakana, and it is often dropped altogether, the tendency of the older language being to avoid double consonants. Thus, karina, "a letter," which becomes kanna by the assimilation of the r to the n following, is always written kana.

All other cases of assimilation belong to the latest form of the language. Except in the case of m or n, the Japanese syllabaries provide no means of writing double consonants, and recourse has therefore been taken to the rude expedient of writing, instead of the consonant assimilated, the letter in which this change most frequently takes place, viz., tsu. Thus, to show that tafutoki, "august," is to be pronounced tattoki, it is spelt tatsutoki; hori suru, "to wish," is written hotsusuru, in order to show that it is to be read hossuru; kitsusaki (pron. kissaki), "the point of a sword," is written for kirisaki, and so on.

The Japanese language dislikes to have successive syllables beginning with the same consonant. To this principle are due such forms as

wo ba for wo wa.
arashi for aru rashi.
kerashi for keru rashi.
boshikugi, "a broad-headed nail," for boshi-gugi.
wasuruna, "don't forget," for wasururu na.
minagara, "all," for mina nagara.

The difference between the second and first conjugation of adjectives is no doubt due to the same tendency. In the first conjugation *shi* is added to the root in order to produce the conclusive form, but as in the second conjugation the root already ends in *shi*, the same rule, if applied to it, would give a termination *shishi*. One of these syllables is therefore dropped.

In the more ancient language this tendency extended to double consonants, one of which was usually dropped, as kanna (for kari na), which is always written kana, arazan nari, often written arazanari, &c.; but in the later and spoken forms of the language an opposite tendency may be observed, and many consonants have been doubled apparently for no other purpose than to strengthen the sound of the word to which they belong. Thus, tada has been strengthened into tatsuta (pron. tatta); mataku into matsutaku (pron. mattaku); vahari is sometimes pronounced yappari; mina, minna; minnami, minnami, and so on.

K.—There is a tendency in Japanese to drop this letter when it occurs in the middle of a word. The most familiar instance of this is in the spoken language, where k is lost in the terminations of the adverbial and attributive forms of the adjective, hayaku, for example, becoming hayau (pronounced $hay\delta$), hayaki, hayai, &c.

The written language also affords examples of the loss of k. Saitsukoro, "previously," for saki tsu koro.

Tsuitachi, "1st day of the month," for tsukitachi.

Waraudzu (pron. warôdzu), "straw shoes," for wara-kutsu.

H, F.—The aspirates of the syllables ha, hi, fu, he, ho, are often vocalized into u, the vowels of these syllables being at the same time dropped, as in the following examples:—

Fuigau (pron. fuigô), "bellows," for fuki-gaha.

Otouto (pron. otôto), "vounger brother," for ato-hito.

Kariudo. " a huntsman," for kari-hito.

Mauchigimi (pron. môchigimi), "former lord," for mahe tsu kimi.

Hauki (pron. hôki), "a broom," for ha-haki.

The western spoken form of the past tense of verbs ending in afu is also an instance of this change. In this dialect the termination ahita always becomes δta (in writing, auta) instead of atta, as in the Yedo language. Thus, the past tense of

shimafu, "to finish," which at Yedo is shimatta, is, in the language of the western provinces, shimôta.*

M and $N.-\nu$ (m or n) is frequently vocalized into u, as in the following examples:—

Kouji (pron. kôji), 'a small road,' for ko-michi.

Teudzu (pron. chô-dzu), "water for washing hands," for te-midzu.

Kautsuke (pron. Kôtsuke), name of province, for Kamitsuke.

Kaube (pron. Kôbe), name of town, for Kami-be.

A familiar example of this change is the n final of the future, which in the spoken language is changed into u, and then forms a crasis with the preceding a, becoming along with it δ .

An ν is frequently introduced for the sake of giving a fuller sound.

Ex: Yokumba, "if good," for yoku ba.

Akambo, "a baby," for akabito.

Tennô, "Emperor," for ten-ô.

Zennaku, "good and bad," for zen-aku.

The Hakodate spoken dialect introduces this ν very freely. M and b are closely related in Japanese. Some words are spelt with either indifferently.

Ex.: Samurafu or saburafu, "to attend on."

Semaki or sebaki, "narrow,"

Kemuri or keburi, "smoke."

Samishiki or sabishiki, "lonely."

Himo or hibo, "a cord."

* Motowori lays down the rule, that vowels which are left when the initial consonant of the syllable to which they belong has been removed, or which are the result of the vocalization of a consonant, should be written with the vowel series of letters $(\mathcal{P} \land \mathcal{P} \Rightarrow \mathcal{F})$ and not with the aspirated series $(\mathcal{P} \land \mathcal{P} \Rightarrow \mathcal{F})$ as is done by some writers.

It should be remembered that the sounds, tu, ti, du, di, si, zi, and hu do not exist in Japanese, and are represented by tsu, chi, dzu, dji, shi, ji, and fu. Hence the variations which take place in inflecting such a verb as matsu (machi, matsu, mata, mate), and in other cases where these letters are involved, are only apparent, and no change of consonant really takes place.

Some of the preceding remarks on letter-changes are further illustrated in the following list of less obvious derivations.

A FEW DERIVATIONS.

Abumi, "a stirrup"; from ashi, "foot," and fumi, "tread." Cf. agaki for ashi-kaki.

Akatsuki, "dawn"; from aka, a root meaning "clear,"

"bright," and toki, "time."

Asatsute (pron. asatte), "the day after to-morrow"; from asu, "to-morrow," and satsute (for sarite), "having passed."

Fuda, "a ticket"; from fumi, "letter" or "writing," and ita, "a board."

Hakama, "trowsers"; from haki, "to draw on," and mo, "clothing."

Harubi, "a girth"; from hara, "belly," and obi, "girdle."

Hotoke, "a deceased person," "a saint," "a god"; from hito, "man," and ke, "spirit."

Idzumi, "a spring"; from *idzuru*, "to issue," and *midzu*, "water." Cf. *mito*, "water-gate."

The, "a house"; from i, root of iru, "to dwell," and he, an old word meaning "place."

Ikada, "a raft"; from uki, "float," and ita, "board."

Inishihe, "ancient time"; from ini, root of inuru, "to go away," shi, a particle indicating past time, and he, "place."

Kamoi, "the upper of the two beams into which the slides are inserted in a Japanese house"; from kami, "above," and i, root of iru, "to dwell."

Koromo, "clothing"; from kiru, "to wear," and mo, "clothing."

Kutsuwa, "a bit"; from kuchi, "mouth," and wa, "ring."

Mahe, "before"; from me, "eye,' and he, "place," or "side." Cf. shirihe, "behind."

Mochi-dzuki, "full moon"; from michi, root of mitsuru, "to be full," and tsuki, "moon."

Mogusa, "tinder"; probably from mohe, root of moyuru, "to burn," and kusa, "herb."

Mukade, "a centipede"; from mukahi, "opposite," and te, "hand."

Nishi, "west," for inishi, i.e., the part where the sun "has gone away."

Nodo or nondo, "throat"; from nomi, "to swallow," and to, "door."

Otodoshi, "the year before last"; from ato, "previous," and toshi, "year."

Ototohi, "the day before yesterday"; from ato, "previous," tsu, genitive particle, and hi, "day."

Susuri, "an inkstone"; from sumi, "ink," and suru, "to rub."

Tadzuna, "reins"; from te, "hand," and tsuna, "rope."

Taimatsu, "a torch"; from taki, root of taku, "to burn," and matsu, "pine."

Tôtômi, name of a province; from towo, "far," tsu, genitive particle, and umi, "sea."

Tsugomori, "the last day of the month"; from tsuki, "the moon," and komoru, "to retire."

Tsuitachi, "the first day of the month"; from tsuki, "the moon," and tachi, root of tatsu, "to arise."

Tsumabirakani, "minutely," "fully"; from tsumu, "to cut

short," and *hiraku*, "to extend." Cf. the phrase, "the short and the long of it."

Yaiba, "sword-edge"; from yaki, root of yaku, "to burn," and ha, "edge."

Yume, "a dream"; from i, a root which appears in inemuru, "to fall asleep," and me, the root of miru, "to see."

The Japanese grammarians have supplied us with etymological appliances far more powerful than any of those described above. They inform us that not only are syllables interchangeable which begin with the same consonant, i.e., those in the same vertical columns of the Table at page 15, but that one syllable may be changed for another if they only contain the same vowel, i.e., the syllables in the horizontal columns of the Table are interchangeable. This is the old maxim that in etymology the consonants count for very little and the vowels for nothing at all, with the difference that with the Japanese etymologists the consonants count for nothing as well as the vowels. With a comprehensive system like this, the gravest difficulties are easily surmounted. Thus, if we want to show that furuki, "old," is derived from wakaki, "young," we have only to run the eye along the columns which contain wa and ka till we come to ha and ra, and then follow the vertical columns in which the latter syllables occur till we find fu and ru, and the demonstration is complete.

This rule is sufficient when the words contain the same number of syllables, but in the case of a redundancy or deficiency in their number, the native grammarians are amply provided for the emergency. By means of jô-riaku (aphaeresis), chiuriaku (elision or contraction), geriaku (apocope), and joji (affixes), the superfluous syllables are promptly removed and additional syllables provided wherever necessary. The following derivations, which are taken from Japanese works on etymology, illustrate the application of these principles:—

Mume, "a plum," is derived from utsukushiku medzurashiku, "beautiful—rare," by taking the first syllable of each word and omitting the others by geriaku. This gives ume, but as u and mu belong to the same column, one may be substituted for the other.

Keshi, "a poppy," is derived from hirake, "to open out," and shiroshi, "white," the syllables hira being removed by jôriaku, and roshi being taken away by geriaku.

Shitagafu, "to follow," is derived from shita ni tsukite

Shitagafu, "to follow," is derived from shita ni tsukite kokoro ni kanafu, the superfluous syllables being removed by chiuriaku.

Neko, "a cat," is from nedzumi konomu, "fond of rats," the first syllable of each word being taken, and the others rejected

Inu, "a dog," is from *inuru*, "to go away," because if taken to another place, he "goes away," and comes back to his master.

Akane sasu, a makura-katoba of doubtful meaning, is derived by the Kanjikô from akaki ke, "red vapour," which is first contracted into ake and afterwards lengthened by joji into akane, and sasu, "to strike," "to shoot."

There is yet another system of derivation, by which words which we should be content to consider as roots are traced to fifty original elements corresponding to the fifty sounds of the Japanese syllabary. The following passage, taken from the preface of a Dictionary of Derivations compiled upon this system, will give an idea of its mode of operation.

"All Japanese words have their origin in the nature of the heart. For the heart has fifty modes of action, and consequently man naturally gives utterance to fifty sounds. If in his heart he thinks ah! the sound ah! comes spontaneously to his lips; if in his heart he grunts assent, he naturally utters the sound u; the thought oh! of alarm causes him spontaneously to exclaim oh! and so on with the rest. The combination of these results naturally in words. Thus the

colour aka (red) is so called because it is so radiant (kagayaku) as to make one feel ah; axvo (green) has been so termed from its being so plentiful (ohoki) as to make us feel ah!; kane (metal) is so called because it adheres (nebari) firmly (kataku) together."

This system, which is not without a grain of truth in it, is aided by a free use of *jôriaku*, *chiuriaku*, &c.

The influence of these theories is observable in the writings of even the most eminent Japanese grammarians, and it has therefore been thought desirable to warn the student against them.

ACCENTS.

Accents in Japanese have but little importance for the student either of the spoken or the written language. A competent authority has stated to me that the distinctions of accent described in the passages quoted below are really observed in speaking by the educated classes of Kiôto, but the language of Yedo certainly neglects them, and educated natives of the east of Japan declare that they are unable to discover any difference in the pronunciation of such words as hi, "the sun," hi, "fire," and hi, "a water-pipe"; kaki, "an oyster," and kaki, "a persimmon."

The views of the native grammarians upon this subject will be learnt from the following extract from the $San-on-k\hat{o}$, by Motowori Norinaga:—

"In the language of this Empire there are but three accents, viz., *the Ξ (or even accent), the \underline{L} (or rising accent), and the \underline{L} (or departing accent). The entering accent (χ) is not in use. Hi, 'the sun,' takes the Ξ accent; hi, 'a water-pipe,' the \underline{L} accent; and hi, 'fire,' the \underline{L} accent. On the other hand the hi of hinata, 'sunshine,' takes the \underline{L}

^{*} 筝 is something like the English monotone; 上 resembles the rising inflection, and 去 the falling inflection.

accent; the hi of hakehi, 'a kind of water-pipe,' takes the 去 accent; and the hi of hibashi, 'tongs,' the 上 accent. Yama, 'a mountain,' has the 平 accent, but in such compounds as yamakaze, 'mountain-wind,' and yamamatsu, 'mountain-fir,' yama takes the 去 accent. Yet in the compounds higashiyama, 'east-mountain,' and nishiyama, 'west-mountain,' yama has the 上 accent. Uji (the name of a district) again is pronounced with the 去 accent, but in the word Ujikaha, 'the river Uji,' it takes the 上 accent, while in the compound Ujibashi, 'the Uji bridge,' it has the 平 accent.

"In this way all words suffer changes of accent, and if in such cases the original accent were retained, a change of meaning would be the result. Take, for instance, yamakaze and yamamatsu, the examples just quoted. If yama is here pronounced, as in the original word, with the 4 accent, the meaning will be 'mountain and wind,' 'mountain and fir,' and we shall have in each case two objects, and not one. It is owing to the change of accent that the meaning becomes 'the wind of the mountain,' 'the fir of the mountain.'

"But yama is composed of the two syllables ya and ma, kaha of the two syllables ka and ha. If we examine the accent of each syllable separately, we shall see that ya has the 上 accent, ma the 本, ka the 上, and ha the 本 accent. The entire words yama and kaha have nevertheless their own accents, both taking the 本 accent. The same principle applies to polysyllabic words such as himukashi (higashi), 'east,' minami, 'south,' etc. But the attempt to distinguish the accent of each of a number of successive syllables leads to confusion, and no clear results can be obtained. This is due to the intimate connection which exists between the sounds of which a word is composed. There is, however, no uncertainty in deciding the accent of any entire word."

Motowori further says that although in speaking, Chinese words are accented by Japanese, the accents follow the

Japanese system, and have nothing to do with the original Chinese tones.

Kitanobe, author of the *Ayuhishô*, says that there are three accents in Japanese, viz., the *yuki* (going), corresponding to the Chinese \maltese ; the *kaheri* (returning), corresponding to the Chinese \pounds ; and the *tachi* (cutting off), corresponding to the Chinese \pounds .

The comparison with Chinese shows that in the above remarks, by accent is meant musical intonation, and not a mere emphasis or stress on the word or syllable. In this latter sense the accent of Japanese words is much less marked than in English. It usually falls on the penultimate syllable, but to this rule there are numerous exceptions.

CHAPTER II

CLASSIFICATION OF WORDS.

Japanese grammarians divide words into three classes, viz.—Na, Kotoba, and Teniwoha.

This classification accords well with the structure of the Japanese language. It rests on a division of words into principal and subordinate parts of speech, principal words being subdivided into uninflected (na) and inflected (kotoba). There is, however, no good reason why this subdivision should not be extended to the subordinate parts of speech, viz.—Particles and Terminations or Tenizvoha. If this be done, we shall have four classes of words, as follows:-

- I. Uninflected Principal words (na).
- II. Inflected Principal words (kotoba).
- II. Inflected Timerpa. ...

 III. Uninflected Subordinate words

 (teniwoha).

With this modification the classification of the Japanese grammarians has been adopted in the present treatise.

Na* means "name," and the class of words so denominated includes the noun, pronoun, numeral adjective, and interjection, together with a number of words, which, although corresponding in meaning to the verbs, adjectives, or adverbs of other languages, are uninflected, and must therefore be reckoned as na. Kotoba means "word." Under this term are comprised

^{*} In the Kotoba no Chikamichi, na are called i-kotoba, or "words which remain at rest," as opposed to hataraki-kotoba, or "words of action," the term which in that treatise has been applied to the kotoba of older writers. By "rest" and "action" are here meant "want of inflection" and "inflection," and hataraki, "working," or "action," has no reference to the usual meaning of verbs as expressing action.

verbs and adjectives. The word *teniwoha** is nothing more than four of the commonest particles, viz.—*te*, *ni*, *wo*, and *ha*, united so as to form one word. Under this designation are included particles and prepositions, together with the suffixes attached to verbs and adjectives.

^{*} Teniwoha.—The aspirate of ha is sounded in pronouncing this word.

CHAPTER III.

UNINFLECTED PRINCIPAL WORDS.

In this class of words are included the noun, pronoun, and numeral adjective of European grammars, together with some classes of words which it is convenient to render in English by other parts of speech, such as verbs, adjectives, or adverbs. Cases of this last kind are especially numerous among words of Chinese origin, all of which are uninflected, and must therefore be taken to belong to this class, by whatever parts of speech it may be convenient to translate them in English. Thus ima, "now," is really a noun, as its derivation shows. It is compounded of i, the root of iru, "to be present," and ma, "a space," the literal meaning being "the present space." Koko, "here," is also a noun, as is shown by its allowing the case-signs no, ni, &c., to be appended to it. Such Chinese words as shinjô, "to offer respectfully," goran, "look," although often used alone, require some such verb as nasaru or suru, "to do," to be understood in order to make the sentence grammatically complete, and are therefore really nouns. The most common case of this kind is where a Chinese or Japanese uninflected word is combined with the verb naru, "to be," or with the particle ni, "in," to form a phrase equivalent to our adjective or adverb, the word being seldom or never used, except in one of these combinations. Thus, kirci naru is used as equivalent to our adjective "pretty"; kirei ni, to the adverb "prettily"; shidzuka naru, to our adjective "quiet"; shidzuka ni, to the adverb "quietly." These phrases are only substitutes for adjectives and adverbs, and must not be confounded with them. The true adjective is an inflected word (the adverb being one of its inflected forms), as may be seen by referring to the Table at the beginning of Chapter IV.

Words of this class have, properly speaking, no declension. The distinctions of gender, number, and case are indicated by means of certain particles placed before or after the words which themselves suffer no change.

THE NOUN.

Nouns may be divided into Simple, Derived, and Compound nouns. Simple or Underived nouns require no remark.

DERIVED NOUNS.

Roots of Verbs.—The roots of verbs often become nouns without any change of form. Thus chiri, root of chiru, "to become scattered," is also used as a noun meaning "litter," "rubbish"; uchi, "a stroke," is the root of the verb utsu, "to strike"; kakitsuke, "a writing," is the root of the verb kakitsukeru, "to note down"; hiraki, "a door with hinges," is the root of the verb hiraku, "to throw open."

Those abstract nouns which seem as if they were formed by adding the syllable mi to adjectival roots really belong to this class. Thus takami, "height," which contains taka, the root of the adjective takaki, "high," is the root of a verb takamu, "to be high"; hayami, "speed," is the root of a verb hayamu, "to be quick." In the old literature these nouns still retain enough of their original force as verbal roots to take before them the particle wo, the sign of the objective case, as in the following examples:—

Akagoma ga agaki wo hayami.

Miyako wo tohomi.

Yama wo ohomi.

The speed of foot of my bay
horse.

Its distance from the capital.
A plenty of mountains.

Some of these nouns in mi, like the English abstract words "height," "depth," are also susceptible of a concrete signifi-

cation. Thus, *fukami* may mean "a deep place" as well as "depth" in the abstract; *takami* may mean not only "height," but "an elevation," "a hill."

Roots of Adjectives.—The roots of adjectives are occasionally used as nouns, as in the phrase shiro no jôfu, "white cloth of first quality."

A few abstract nouns are formed from the roots of adjectives by changing the final vowel of the root into e, as ake, "redness," from akaki, "red"; kure, "darkness," from kuraki. "dark"; take, "length," "a height," from takaki, "high."

Sa.—The abstract nouns formed by adding sa to the roots of adjectives constitute a large class. It is to be observed that these nouns express not so much the quality denoted by the adjective as the degree of the quality. Takasa, for instance, is rather "highness" than "height"; ohokisa is "the degree of bigness," i.e., "the size," rather than the mere quality of largeness in itself.

Examples:-

Akasa, "redness," from akaki, "red."

Nigasa, "bitterness," from nigaki, "bitter."

Atsusa, "thickness" or "hotness," from atsuki, "thick" or "hot."

Shirosa, "whiteness," from shiroki, "white."

In the old language nouns are formed in one or two cases by adding this termination to the roots of verbs, as *kahesa*, "return," from *kaheru*, "to return."

Ra.—A few abstract nouns are formed by adding ra to adjectival roots, as wabishira, "misery," from wabishiki, "miserable."

Ge, Ke.—Abstract nouns are also formed from na (uninflected words) and from verbal or adjectival roots by the addition of the syllable ge or ke, which is identical with ki, "spirit." Derivative words of this class are of very frequent occurrence in the ancient monogatari.

Examples:-

Nanige (in the phrase nanige naku, "as if nothing were the matter"), from nani, "what."

Midzuke, "moisture," from midzu, "water."

Aburake, "oiliness" or "greasiness," from abura, "oil."

Nige (in the phrase nige naki, "incomparable"), from niru, "to be like."

Hitoge (in the phrase hitoge naki, "lonely"), from hito, "a man."

Tsuyoge, "an appearance of strength," from tsuyoki, "strong." Abunage, "an appearance of danger," from abunaki, "dangerous."

Wadzurahashige, "an appearance of troublesomeness," from wadzurahashiki, "troublesome."

These nouns are often used in combination with *naru* as the equivalents of adjectives, or with *ni* added, instead of adverbs.

Examples:-

Mukutsuge naru, "hideous." Rikôge ni, "plausibly." Iyashige ni, "meanly."

Ka.—The uninflected words derived from other uninflected words, or from the roots of verbs or adjectives by adding one of the terminations ka, yaka, yoka, raka, haka, saka, soka, or bika are of the class described at page 41 as always found combined with the verb naru, "to be," to form phrases equivalent to adjectives, or with ni added as equivalents of adverbs. The ka which appears in all these terminations is no doubt identical with the ke or ge of the preceding paragraph, but the remaining syllables cannot be so readily explained. Ra is perhaps the ra used to form abstract nouns from adjectives, and bi another form of the termination mi, which has a similar force. These words are mostly descrip-

tive of outward appearance, and they often correspond to English derivatives in *ful*, *y*, or *ly*.

Examples:-

Shidzu-ka naru, "quiet."

Shidzu-ka ni, "quietly."

Nodo-ka naru, "gentle."

Waka-yaka naru, "youthful."

Taka-yaka ni, "loudly"; "with a loud voice."

Nihohi-yaka naru, "having a blooming appearance."

Hana-yaka naru, "gay-looking."

Koma-yaka naru, "minute."

Tama-saka ni, "by a rare chance."

Yabu-saka naru, "stingy."

Nayo-bika naru, "graceful."

Nada-raka naru, "gentle" (of an acclivity).

Niku-raka naru, "hateful."

Oro-soka ni, "coarsely"; "without taking pains."

Ate-haka naru, "noble-looking."

Makotoshi-yaka ni, "with an air of truth."

Aza-yaka ni, "clearly"; "distinctly."

Compound nouns may consist—

Ist. Of two nouns, as *kazaguruma*, "a toy windmill"; from *kaze*, "wind," and *kuruma*, a "wheel or mill"; *kahabata*, a "river-side," from *kaha*, a "river," and *hata*, "a side."

2nd. Of the root of an adjective followed by a noun, as kurombo, a "negro," from kuro, root of kuroki, "black," and hito, "a man"; akagane, "copper," from aka, root of akaki, "red," and kane, "metal."

3rd. Of a noun followed by the root of an adjective, as tomobuto, "big stern" (a kind of boat), from tomo, "the stern," and futo, root of futoki, "thick."

4th. Of the root of a verb and a noun, as *norimono*, "a travelling chair," from *nori*, root of *noru*, "to ride," and *mono*, "a thing."

5th. Of a noun and the root of a verb, as *monoshiri*, "a scholar," from *mono*, "a thing," and *shiri*, root of *shiru*, "to know"; *midzuire*, "a water-holder," from *midzu*, "water," and *ire*, root of *iruru*, "to put in."

In compounds the first element may qualify the second, as *ita-do*, "a plank door"; *shô-shô*, "a general of the third rank"; or in Chinese words may govern it, as *kai-san*, "founding a temple"; *ke-shin*, "transformation"; or may be governed by it, as *hi-kaki*, "a poker"; *sake-nomi*, "a drunkard"; or they may be joined by "and" understood, as *him-puku*, "poverty and riches"; *jô-ge*, "going up and coming down"; *de-iri*, "going out and coming in." In Chinese compounds two elements of the same or similar meaning are often combined for the sake of emphasis or comprehensiveness, as *kai-sei*, "reforming"; *kon-zatsu*, "confusion."

Hybrid Compounds (compounds of which one element is of Chinese and the other of Japanese origin) are much

commoner in Japanese than in European languages.

Examples:—Jiu-bako, "a nest of boxes made to pile up one on the top of another," from jiu, a Chinese word meaning "to pile up," and hako, the Japanese word for "box"; obohe-chô, "a note-book"; haretsu-dama, "a bomb-shell"; jô-bukuro, "an envelope."

HONORIFIC PREFIXES.

Mi, ohomi, omi, ohon, on, o.—Nouns with one of these honorific words prefixed are of the nature of compounds.

Mi means "august," "imperial," and is usually rendered by the Chinese character 御. It is generally, although not exclusively, found before words relating to the Mikado or to the kami (gods of the Shintô mythology), as mi-ko, "a prince"; mi-ya, "a shrine of a kami"; mi-su, "the transparent screen formerly hung before the Mikado on public occasions"; mi-ne, "the top of a mountain."

Ohomi is composed of oho, the root of ohoki, "great," and the mi just noticed. Omi, ohon, on, and o are abbreviated forms of it. Ohomi and omi are only found in the old language, the modern language preferring the form on. Omi, however, is still used in the spoken language prefixed to one or two words, as omi ashi, "the honorable legs." O is almost entirely confined to the spoken language, where it is exceedingly common.

All these words are prefixed to Japanese words only, except o, which is found joined to a few Chinese words, as o rusu, "your absence"; o yaku-sho, "the honorable office"; o taku, "the honorable house," i.e., "your house." Mi is also found prefixed to Chinese words, as mi biôbu, "the honorable screen," but this is extremely rare.

Examples of ohomi, &c.:-

Ohomi-yuki, "an imperial progress."
Ohomi-obi, "the honorable girdle."
Ohon-gami, "the great and august god."

Idzure no ohon toki ni ka I know not in what (Emari ken. peror's) honorable time it was.

Nani bakari no mi sakana Although I have no fish to mo safurahanedo (pron. offer you. sôrawanedo).

Ikade on na wo kikase-

Hime-miya no on tomo shite. Mikado on namida koboshite. Mikado no on yamahi. I beseech you to tell me your name.

Accompanying the Princess. The Mikado shedding tears. The Mikado's ailment.

Before words of Chinese origin are prefixed the honorific words go or gio, as in go-sho, "the honorable place," i.e., "the palace"; ki, as in ki-koku, "the honorable country," i.e., "your country"; son (before the relations of the person

addressed), as in son-pu (pron. som), "the honorable father," i.e., "your father."

Go occasionally appears before Japanese words, as go motsutomo, "you are right."

HUMBLE PREFIXES.

Humble prefixes are found with Chinese words only. They are—

Gu, as in gu-sai, "the stupid wife," i.e., "my wife."

Setsu, as in setsu-bo, "the awkward mother," i.e., "my mother."

Sen, as in sen-zoku, "the mean family," i.e., "my family." Shô, as in shô-jo, "the little woman," i.e., "my daughter." Hi, as in hi-ka, "the rough, rustic house," i.e., "my house."

GENDER.

In the class of compound nouns should also be included nouns with one of the words wo, "male," or me, "female," prefixed. An n is sometimes inserted for the sake of euphony

Examples:—

MASCULINE.

Wo-uma, "a horse." Wo-jika, "a stag." Won-dori, "a cock." FEMININE.

Me-uma, "a mare." Me-jika, "a hind." Men-dori, "a hen."

W is not pronounced in these words.

Wo and me are combined with Japanese words only.

NUMBER.

Under the head of compounds there remains to be noticed a kind of plural formed in the case of a few nouns by a repetition of the word. Except in the ancient literature, these forms have never exactly the same force as the plurals of European languages, nor is their meaning precisely the same in every case. "Every," "all kinds of," before the noun, are the most usual renderings.

Examples:-

Kuni, "a country": kuniguni, "every country." hitobito, "all sorts of men." Hito, "a man"; tokorodokoro, "various places." Tokoro, "a place"; Toki, "a time"; tokidoki. "sometimes."

tabitabi, "time after time"—" often." Tabi, "a time"; shinajina, "all kinds of articles"—"an Shina, "an article"; assortment"

In almost every case the first letter of the second part of these compounds takes the nigori, if it be a letter which admits of it.

PRONOUNS.

The distinction of person which holds so prominent a place in the Aryan languages has little place in Japanese. The verb has no grammatical inflections to indicate person. and although there are words which correspond in meaning to the personal pronouns of other languages, their grammar is the same as that of nouns, and the idea of placing them in a separate class has not even suggested itself to the native grammarians.

The use of personal pronous is much more restricted in Japanese than in English. As in Latin and Greek, they are used not as mere signs of the person of the verb, but in order to prevent ambiguity, or in cases where there is an emphasis upon them. Thus, "I will go," "He does not know," are in Japanese simply yukan, shirazu. But where the pronouns are emphasized, as in the following sentence, they must be expressed in Japanese.

Ko womina naraba, waga ko ni sen; wonoko naraba. nanji yumiyatori ni nashitatevo.

If the child is a girl, I will make it my child; if it is a boy, do you educate him for a soldier.

Where personal pronouns are wanting, the person of the

verb may usually be inferred from the presence of honorific forms indicating the second person, or of humble forms showing that the first person is meant.

The various modes of indicating the plural are but rarely had recourse to in the case of other uninflected words, but with pronouns it is the rule to employ the reduplicated form, or to add one of the plural affixes when two or more persons or things are meant.

PERSONAL PRONOUNS OF THE FIRST PERSON.

I.—Japanese Words.

A, wa, are, ware, waro.—The most ancient Japanese word for "I" is a or wa. Both these forms are of frequent occurrence in the Manyôshiu, but they have become obsolete in the later forms of the language.

Examples:-

Wa wo matsu tsubaki.

A wo matsu to
Kimi ga nure-ken
Ashibiki no
Yama no shidzuku ni
Naramashi mono wo.

The camellia which awaits me.

Oh, that I could become changed into the drippings from the mountain toilsome to the feet, with which thou hast doubtless been wetted while waiting for me!

Ago (for aga) ohokimi, "my great lord."

When followed by the possessive particle ga, wa is still in use.

Examples:--

Waga kimi, "my lord."

Waga ko, "my child."

Waga tomogara, "my companions" (used in the sense of "we").

Waga atsurahe yarishi sakadzuki, "the wine cup which I ordered from you."

Waga has also the meaning "one's own." Waga ko, for instance, may mean "his or her own child" as well as "my child." Wa nami is properly a plural, but it is often used as a singular.

Are, another obsolete word for "I," is a with the syllable re, which is also found in sore, kare, tare, &c.

Ware (plural* warera, wareware, or waredomo) is formed by adding the re just mentioned to wa, "I." It is the most general word for the pronoun of the first person, and is found in the most ancient as well as in the latest forms of the language. It is occasionally heard in the spoken language in the plural form warera, which is used towards inferiors as a pronoun of the second person plural equivalent to orera. In the modern epistolary style, warera is used for "I" in addressing inferiors. Instead of ware no and ware ga, waga is used.

Examples of ware:-

Ware nakaran ato nari tomo. Ware ni yoki hakarigoto ari. Ware kaheri kitaru made, kokoni arite matsuheshi

Ware-ware ha Hida no kuni naru takumi nari.

Even after I am dead.

I have got a good plan.

Vou must wait here till

You must wait here till I return.

We are artisans of the province of Hida.

Waro is an obsolete word for "I." It seems to be only a variation of ware.

Watakushi.—As a pronoun, watakushi belongs to the spoken language, and to modern epistolary correspondence, where it is the commonest word for "I." Watakushi gi (thing) and watakushi kata (side) are also used. In the literary language watakushi means "selfishness." "that which is private or personal." Its derivation is doubtful.

^{*} The editorial "we" is ware hito, "I and man," and sometimes waga hai, or waga tomogara.

Maro.—Maro is used chiefly, although not invariably, to inferiors, or to persons with whom one is on terms of close intimacy. It has much the same force as the ore or washi of the spoken language. Towards persons with whom one is not on familiar terms, maro is a haughty word for "I." The author of the Makura Zôshi remarks that the Court nobles, in addressing the Mikado, should not say maro for "I," but should use their own names instead.

In the Tosa Nikki a child says,—"Maro kono uta no kaheshi sen," "I will compose a reply to this verse of poetry." In one of Motowori's works he says: "Aru hito tohite ihaku," "Uta to ha ikanaru mono wo ifu zo ya?" "Maro kotahete ihaku." "A certain person asked of me, 'How do you define poetry?' and I answered....."

The Mikado and persons of high rank are in books made to use *maro* towards inferiors, as *Maro no yo ni*, "in my reign." It is little used in the modern written language.

Waraha (literally, "the child"), corresponding to the Chinese 妾 $(sh\hat{o})$, is only used by women. Ex.: Waraha wo mo ite yuki tamahe, "take me with you, too."

Onore (plural onorera) is properly of no person. It means "self," "oneself," and may be used indifferently for "myself," "yourself," "herself," and "himself." In practice, however, it is so little different from "I" that a place has been given it among the pronouns of the first person.

In the spoken language, *onore* is usually of the second person, and is a contemptuous word oftenest heard along with abusive language.

Examples of onore:—

Ima onore misute-tatematsu- If you shoul raba, ikade yo ni ohasen? me, how o

If you should now abandon me, how could I exist in the world?

Onore kimi no kokoro yoku I have well known your heart. shirinu.

Onore ga chichi no tokui nari. He is a customer of my father's.

Onore hitori makaran to ihite. Saying "I will go myself, alone."

Mi, midomo, midzukara. — Mi literally means "body," "person," and hence "self," but like onore it is often used as a pronoun of the first person. Waga mi has the same meaning as mi. The derived form midzukara is, however, commoner. It is formed by adding to mi the genitive particle tsu, and the kara which also appears in nagara, mono kara, &c. Midzukara means "by or of oneself," "by or of myself."

Midomo is used in the spoken dialect by persons of the samurai class for the singular and plural indiscriminately.

Name of the speaker used instead of the pronoun of the first person.—Both in speaking and in writing, the name (the nanori, or if the speaker or writer has no nanori, the na) is often used instead of "I."

Examples:-

Chikuzen mairite sono mukashi no kotodomo hito-bito ni katarahi haberi-shikaba

Norinaga anzuru ni.

After (I) Chikuzen came and related to them all the things that had taken place previously to that.

In Norinaga's opinion [i.e., in my opinion].

Soregashi.—Soregashi properly means "a certain person," "somebody," but it is generally used in the sense of "I." It is peculiar to the written language.

Example:-

Soregashi ga me no nihaka ni Inasmuch as my eyes were naku narite habereba. suddenly destroyed.

Yatsugare is a humble form of expression, equivalent to the Chinese boku (僕). It is not in use in the spoken language, nor in the earlier written language.

2.—Chinese Words.

Chin 朕 is the word used by the Mikado in his official character. It corresponds to the 'we' of European sovereigns.

Shin 臣 (plural shin-ra) is the converse of chin. It is the word used in petitions and memorials to government, or to persons in authority. In China this character is only used by officials of the highest rank, but in Japan all classes employ it. It is often preceded by the character gu 愚, "stupid."

Yo 余 (plural yora), is peculiar to the written language.

It may be used to superiors, inferiors, or equals.

Sessha 拙者, "the awkward person" (plural sesshadomo), is the word used for "I" in the official epistolary style when addressing equals. It is not altogether unknown in the colloquial language, but in speaking it is rather a formal word. In Aidzu it is commonly used for watakushi. Setsu, the sound of 拙, the first of the two characters for sessha, is also in use in the spoken language, as in the phrase setsu no ron ni ha, "in my poor opinion."

Boku 僕, "servant," is a humble word. It corresponds to the Japanese patsugare, which, indeed, was probably intended as a translation of boku. Boku also belongs to the spoker language.

Gu B also implies humility. It is confined to the written

language.

Examples:-

Gu ga senken hakushiki wo mochite.

Gu ikko no shônin to ihedomo--- With my despicable views and slender intelligence.

I am nothing but a poor merchant, but—

 $Sh\hat{o}$, "handmaiden, concubine," is a word used by women in addressing superiors.

The modern epistolary style has numerous other words, mostly of Chinese origin, for the pronoun of the first person, such as—

Ge-setsu, "the mean and awkward person"; gu-setsu, "the stupid and awkward person"; ya-fu, "the rustic, the clown"; gu-tei, "the stupid younger brother"; set-tei, "the awkward younger brother"; fu-nei, "the simple one"; fu-shô, "the silly person"; hi-sei, "the clownish student"; rô-sei, "the ignorant vulgar student"; shô-sei, "the small or inferior student."

The student will probably find that among the numerous words for "I," ware, waga for the book style, sessha for official letters, and watakushi for private letters, will be sufficient for all his requirements.

PERSONAL PRONOUNS OF THE SECOND PERSON.

I.—Japanese Words.

Na or nare (cf. wa, ware) is the word used for the pronoun of the second person in the oldest form of the Japanese language. It occurs frequently in the Kojiki and Manyôshiu, but has now been long obsolete. The Loochoo language still preserves it.

The *Wakun-shiwori* looks upon it as identical with *na*, "name," but it is better to consider it as the original pronoun of the second person.

Ex.: Na to a to, "you and I." (Kojiki.)

Nanji (plural nanjira) is derived by Japanese grammarians from na, "a name," and mochi, root of motsu, "to possess." Its original meaning is, therefore, "the name possessor,"— "the famous person." This derivation is confirmed by the fact that a form ohonanji, or ohonamuchi, is found in old books as the name of a god.

Nanji is perhaps the commonest word for the pronoun of the second person in the book style. It is the word used to translate the Chinese if and the English "thou," which latter it very much resembles in force. In the later literary language it usually indicates that the person addressed is the speaker's inferior. Nanji is not used in the epistolary style or in the spoken language.

Examples:-

Nanji gunji wo ba ika naru mono to omofu?

Nanji osoruru koto nakare. Nanjira hisokani fû-fû to narite.

Mikado "Kore ha nanji ga tsukureru mi hotoke ni ya" to tohase-tamafu. What sort of a person do you think a district magistrate is? [Said by a magistrate to a person who has been disrespectful to him.]

Be not thou afraid.

Ye having become secretly man and wife. [A judge addressing criminals.]

The Mikado asked, "Is this an image made by you?"

Imashi, mimashi, or mashi is an old word for "you." It resembles nanji in its force and application.

Kimi, "lord," is used towards persons not differing greatly in rank from oneself. The Shôsoko Bunrei says that in spite of its literal signification, kimi is not a sufficiently respectful term to use in addressing one's own lord. In poetry it is the commonest word for "you." In the spoken language persons of the educated class sometimes address each other as kimi.

Wa-gimi, "my lord," is also found.

Example:—

Wagimi kudarase-tamafu ha saihai nari, "it is fortunate that you have come down" (from Kiôto).

Omahe or onmahe (pron. ommaye: plural omahe gata or

omahe tachi), onmahe sama, otemahe.—Omahe or onmahe is composed of o or on, abbreviations of the honorific word ohomi, and mahe, "before." The meaning is therefore "the honourable presence." Omahe is, in writing, a highly respectful word—more so than kimi—and is used to superiors; but in the spoken language, where it is very common, it is only used towards inferiors, or to persons with whom one is on very familiar terms.

Omahe is seldom or never met with in the modern written language, but the derived form onmahe sama is a common word for "you" in letters written by women of the lower class.

Otemahe belongs to the epistolary style. It is used towards inferiors, and is also met with in the spoken language.

Nushi (plural nushi-tachi), wa-nushi, o nushi.—Nushi is literally "master." As a personal pronoun, it is only used to inferiors. It is also found in the spoken language. Wa-nushi, literally "my master," and o nushi, "the honorable master," do not differ from nushi.

Example:—

Wanushi wo mo umitari, "I gave birth to you also."

Soko (literally "that place," from so, root of sore, "that," and ko, an old word meaning "place"), with the allied words sokomoto or sono-moto, "that quarter," sonata (for sono kata), "that side," and sono hô (hô being Chinese for kata, "side"), are used towards persons of inferior station to oneself. They form their plurals by adding tachi.

Sono $h\hat{o}$ is the word with which a criminal's sentence begins.

Examples of soko, &c.:-

Soko wo ba ika bakari ka ha omohi kikoeshi.

Sokotachi no ifu tokoro kokorogurushikereba — saraba yukiten. How much did I think about you? [i.e., Do you imagine I thought of you?]

As what you say makes me sorry for you—well then, I will go.

Soko wo machi-tamafu koto hisashi.

Sono hô gi, shiri wo in to hosshi,—

Their waiting for you has been long.

You, in the desire to aim at your own selfish advantage,—

On-mi (pron. ommi), composed of the honorific word on and mi, "body," "person," is a respectful word for "you," common in the later book style.

On-mi idzuku wo sashite yukase-tamafu? "whither are you going?"

O koto also belongs to the later book style, as okoto ga senaka ni oharete, "borne on your back." In this sentence the speaker is a mother addressing her grown-up son.

Mauto (pron. môto), from ma, "correct," "just," and hito, "a man," is only used towards inferiors, as for instance by a noble to his retainers. The following example is from the Genji Monogatari:—

Kono anegimi ya mauto no nochi no oya? This elder sister is then your second parent?

Koyatsu, or koitsu, lit. "this fellow," is an extremely contemptuous word.

Ki-sama is a hybrid word composed of the Chinese honorific prefix ki 貴, "noble," and the Japanese word sama, "sir." Kisama occurs frequently in the modern epistolary style, and although not employed in addressing superiors, is by no means an impolite word. In the spoken language it is a contemptuous or familiar expression.

Anata, in the sense of "you," does not belong to the written language.

2.—Chinese Words.

Kak-ka, Ki-ka. These are the principal words for "you" in the modern official epistolary style. Kak-ka is considered as equivalent to "Your Excellency," and is used in addressing

Ministers of State, nobles, the Foreign Representatives, and other persons of similar rank. *Ki-ka* indicates much the same rank as "Esquire." It is the word used to Foreign Consuls, the principal local authorities at the open ports, the secretaries in the public departments, &c. *Kak-ka* and *ki-ka* are also placed after the name in writing the address, as *E-koku Kôshi Kak-ka*, "His Excellency the British Minister."

Hei-ka, Den-ka. In the same way Hei-ka (Your Majesty) is used in addressing the Emperor, and Den-ka (Your Highness) towards Princes of the Imperial family, and formerly to the Taikun, as Tennô Heika, "His Majesty the Tennô"; Taikun Denka, "His Highness the Taikun."

Sok-ka is also much used in the official epistolary style. It is a moderately respectful word.

In private letters, ki-kun, son-kun, or son- $k\hat{o}$ may be used to equals or superiors, and ki-den, or ki- $j\hat{o}$, to inferiors.

Go-zen is the pronunciation of the Chinese characters by which omahe is written. It is, like omahe, a respectful word. Go-zen belongs to the book style. Go-hen (plural go-hen ra) is the Chinese equivalent of mauto, and, like it, is only used towards inferiors.

The student will probably find that *nanji* for the book style, *kak-ka*, *ki-ka* or *sok-ka* for official letters, and *ki-kun* or *ki-den* for private letters will be all that he requires for writing Japanese.

PRONOUNS OF THE THIRD PERSON.

Ka, kare (pl. karera), a, are (pl. arera). These words are, properly speaking, the substantive forms of demonstrative pronouns, and mean literally "that person," "that thing." They are, however, used for "he," "she," "it," "they."

At the present time the distinction between *kare* and *are* is that the former is confined to the written language, and the latter to the spoken idiom. In the older language both words are in use, but a difference of meaning is recognized, *kare*

being applied to the less remote, and *are* to the more remote, of persons or objects not conceived of as immediately present before the speaker or the person addressed. *Kare* would therefore correspond to the Latin *is*, and *are* to *ille*.

Ka and a are old forms. They are usually followed by the particle ha.

In the written language a and are are much less frequently met with than ka and kare.

Examples:-

Kare ga akugiô wo nikumi- Inas worikereba.

Inasmuch as he hated his evil conduct.

Ka ha to mite wataranu uchi

Seeing that it is she, whilst I do not cross over—

The Japanese are fond of punning on $ka\ ha$. Thus in the above sentence it must be taken in two meanings, viz., $ka\ ha$, "she," and kaha, "a river."

It cannot be too strongly impressed upon the student that the Japanese language, although so abundantly supplied with personal pronouns, is very sparing in their use. There are often pages and even whole chapters without a single personal pronoun. In writing Japanese it is a good rule never to introduce them except when absolutely necessary for the sense, and always to think first whether one of the numerous honorific or humble words or forms will not serve the purpose. These remarks apply equally to the spoken language.

DEMONSTRATIVE PRONOUNS.

Root and Archaic Form.	Substantive Form.	Adj, Form.	Meaning.
*Ko,	kore (pl. korera),	kono,	this.
So,	sore (pl. sorera),	sono,	that.
Ka,	kare (pl. karera),	kano,	that.
A,	are (pl. arera),	ano,	that.

^{*} Kore and kono correspond to the Italian questo (Latin hic), sore and sono to cotesto (Latin iste), and kare and kano, are and ano, to quello (Latin is, ille).

Ko, kore, kono are said of things conceived to be near, or belonging to the speaker. They may be described as demonstrative pronouns of the first person.

Ko and kore III are substantive forms. Ko is only used when followed by one of the particles no, wo, ha, or ya, or in forming compounds, as, for instance, koko, "this place," "here"; ko-toshi, "this year"; ko-yohi, "this evening"; kovo-naki, "unsurpassable." In the Kojiki, however, ko is more freely used, and such constructions as ko wo ba are found where the later language would have kore wo ba.

Kono (i.e., ko followed by the genitive particle no) is the adjective form. It should be distinguished from kore no. Kono nedan, for instance, would mean "this price"; kore no nedan, "the price of this."

Examples:—

ha aran?

Ko ha koto-mono no kaha nari

Ito ashiki koto to te, kore kare kikovu.

Ko va matsu-mushi no koe ni Might this be the note of the matsu-mushi?

> This is the skin of a different animal.

> Making it a very bad thing, he said this and that. [I.e., He made all manner of objections to it.]

So, sore, and sono, "that," are said of persons and things which are regarded as near, or in some way connected with the person addressed. They may be called the demonstrative pronouns of the second person. Sonata (for sono kata, "that side") and soko are actually used as personal pronouns of the second person, and sono is frequently best translated by the English "your." The most common use of sore and sono is where they refer to something which has just been mentioned, it being conceived as present to the mind of the person addressed.

So is seldom found except with one of the particles no, ga, mo, yo, wo, or ha affixed, or in compounds, as soko, sochi.

So and sore are substantives; sono is the adjective form.

The same distinction is to be observed between *sono* and *sore no* as between *kono* and *kore no*.

Sore is sometimes seen in a detached position at the beginning of a chapter. This is a Chinese idiom, and is confined to the style imitated from translations of Chinese books.

Examples of sore:

Soha shirazu, Soga ihi-keraku.

Tatsu no kubi ni itsu iro ni hikaru tama ari—sore wo torite tamahe.

Yorite koso sore ka to mo mime,

Sore ni mo yorazu. Sono hoka. Sono koro That I did not know.
That which he said.
In the dragon's head there is

In the dragon's head there is a jewel which shines with five colours; it take and give to me.

Not until one has approached will one see whether it is that or not.

Without reference to that. In addition to that. At that time.

Ka, kare, and a, are have been noticed as personal pronouns of the third person, but, as already observed, they are really demonstratives. The forms kano and ano are never possessive adjective pronouns, but demonstrative adjective pronouns. In other words, kano and ano (ka and a, with the genitive particle no) mean "that," not "his" or "her," which would be, in Japanese, kare ga or kare no, are ga or are no. Kano is also found in the sense "a certain."

Kare, kano, *are, ano are used of persons or things not

^{*} Are and ano are of rare occurrence in the written language, but in the spoken language they have almost superseded kare and kano.

immediately present. They may be termed demonstrative pronouns of the third person.

Kare ha nani zo to nan wotoko ni tohi-keru.

Kare ha nani bito zo?

Kano hô ni haya kogi-yose yo. Kano hito mo ikani omofuran.

Kano on tenarahi tori.

"What is that?" he asked the man.

What man is he? Who is he?

Quickly row to that side.

I wonder what somebody thinks of it.

Taking the copy-book in question.

INTERROGATIVE PRONOUNS.

Root and old subst. form.	Modern subst. form.	Adjective form	Meaning.
Ta — Na Idzu —	Tare Dare Nani Idzure Dore	— Nani no Idzure no Dono	who (written l.) who (spoken l.) what which (written l.) which (spoken l.)

Ta, tare, "who." The root ta is preserved by the old language in the expressions ta zo, "who"; ta ga, "whose." The Kojiki has ta ni, "to whom," instead of tare ni. Ta, tare are used of persons only.

Nani, "what" (plural nanira), is used of things only, except in the compound nani-bito, "what man," "who!" Nani no, usually pronounced nanno, is the adjective form, as nani no

uma, "what horse."

The root of *nani* is probably *na*, the *ni* being originally the preposition "to." *Nani* is found in the older literature in the sense of "for what," "to what end." The root *na* is also found in *naze*, *nado*, "why." *Nani* belongs to both the written and the spoken languages.

Idzure, "which," "where," is used both of persons and things. Idzure no is the adjective form. The same root is found in the adverbs idzuko, "where," idzuchi or idzukata, "whither," &c. In the spoken language all these words change idzu into do. Thus idzuko becomes doko; idzuchi, dochi, &c.

Classical Japanese does not recognize the meaning "at any rate," in which the spoken language and later writers often use *idzure*.

Ika, "what manner," is found in connexion with a few words and particles only, as—

Ika naru, "what manner of."
Ika ni, "in what manner," "how."
Ikade (for ikanite), "how."
Ikaga, "how."
Ikaga no, "what kind of."
Ika-bakari, "how much."
Ika-hodo, "how much."

Iku, "what number," appears in the following combinations:—

Ikutsu, "how many";
Ikura, "how much," or "how many";
Ikumai, "how many" (of flat things);
Ikuka, "how many days";
Ikubaku, "how much";

and also before many nouns, as *iku-ki*, "how many trees"; *iku-haru*, "how many springs."

Itsu, "what time," "when," is found alone and also in combination, as itsuka, itsushika, "some time or other"; itsugoro, "when," &c.

Examples of Interrogatives:-

Kono yama no na wo nani to What is the name of this ka mafusu? mountain?

Kono rvomina tazo to tofu.

Idsure ni mo are.

Ta ga makoto wo ka ware ha tanoman?

Kiku hito ha tare naran?

Ikani shite idzure to shiran?

Itsu mairitsuru zo?

Kono hito ha ikani narinuru zo?

Ikaga subcki to oboshimeshiwadzurafu ni.

Iku tabi to ifu koto naku.

He asked who this woman was.

Be it whichsoever it may.

In whose truth shall I put trust?

Who can he be who inquires? How shall I know which it is?

When did he come?

What has become of this man?

Whilst sick with anxious thought what she should do.

No number of times being specified. Any number of times.

INDEFINITE PRONOUNS.

The Interrogative Pronouns tare, idzure, and nani become Indefinite Pronouns by the addition of the particles ka or mo. Thus tare ka is Japanese for "somebody," nani ka for "something," tare mo for "anybody," and nani mo for "anything." Ka, however, sometimes only intensifies the interrogatives. When tare mo and nani mo are followed by negatives, the negative may be joined to them in rendering into English, and the whole translated "nobody," "nothing." Thus tare mo shirazu is "nobody knows"; nani mo shirazu, "he knows nothing."

Idzuremo idzuremo kaherigoto mihezu.

Nanika ito kokoro-uki koto. Iretaru mono nanimo kôbashiki mono nashi, To none of them did any answer appear.

Some great cause for sadness. Among the things contained in it there was nothing sweet-smelling. Other words used as Indefinite Pronouns are:-

Hito.—This word literally means "man," and is used in a similar way to the French "on" or the English "one," "people." It may also mean "other people" (French autrui). Examples:—

Hito no uwasa shichi jiu nichi nari.

Hito no kuni he makari-keri.

Mina hito. Hito wo hito to mo sezu. The talk of the world is for seventy days.

He went away to a foreign country.

Everybody.

He does not look on people as human beings.

Soregashi originally meant a "certain person," "somebody," but it has come to be merely a humble way of saying "I."

Nanigashi, "a certain person," "somebody," is used where a person's name is not known, or is purposely left unindicated.

Aru hito, lit. "an existing man," is also very commonly used for "somebody."

Mina, "all," is used either alone or with a noun. The old language put mina before the noun, as mina hito, "all men"; the later language puts it after, and in fact makes it an adverb qualifying the verb of the sentence.

DISTRIBUTIVE PRONOUNS.

Ono-ono, mei-mei, correspond to the English word "each" when used as a substantive. "Each," as an adjective pronoun, is rendered by ono-ono no or mei-mei no. Mei-mei is Chinese.

REFLEXIVE PRONOUNS.

Shi. The most ancient reflexive pronoun in the Japanese language is shi, "self" or "own." It occurs frequently in the Manyôshiu, but is now entirely obsolete.

Onore is at present the ordinary word for "self," "himself," "herself," "itself," &c. The final syllable re is omitted before the genitive particle ga, as in the phrase ono ga waruki koto "one's own faults." The derivative word onodzukara, "of oneself," is also in use. Dzu is here the genitive particle tsu with the nigori.

Mi and midzukara are synonymous with onore and onodzukara. Mi means "body," hence "person," "self."

Waga is properly a pronoun of the first person, but it is also used in all persons in the sense "one's own," as waga ko "one's own child."

Ji-shin and *ji-bun* are Chinese words for "self." They belong to the later language.

Examples of reflexive pronouns:-

Onore sakadzuki te ni torite.

Ame no shita ni onore ni masaru takumi aru to mo zonji-safurahazu,

Onore to marobi.

Jishin ni mo zenkwai no atahazaru wo shiri.

Shi ga haha wo toraku wo shirazu.

Taking the wine-cup into his hand himself.

He did not think that under heaven there was any better workman than himself.

Rolling over of itself.

He knew himself that it was impossible that he should recover.

They know not of their own mother's being taken.

RELATIVE PRONOUNS.

The Japanese language has no relative pronouns, nor indeed relative clauses at all. What is a relative clause in English is in Japanese converted into an attributive clause, and like other attributives, is placed before the noun which it qualifies—viz., the noun which is in English the antecedent of the relative clause. The verb of the relative clause is put

in the attributive form in the Japanese construction. Thus, "the man who comes" is in Japanese kuru hito; "the man who came yesterday," kino koshi hito. The same construction is found in English in such phrases as "the murdered man" for "the man who was murdered," "the stolen goods" for "the goods which were stolen"; and it is still commoner in German, where it is often applied to long phrases which would inevitably be relative clauses in English.

The same construction is allowable even when the relative in English is not in the nominative, but in one of the oblique cases, as in the following examples:—

Hana saku yama.

The mountain *on* which flowers are unfolding. [Lit., the flower-unfolding mountain.]

Matsu hito konu mono yuyeni.

Because he comes not whom (I) await.

Uguhisu no naki-tsuru hana.

The flowers *amongst* which the *uguisu* has just been singing.

Uwo ohoki kaha.

A river *in* which fish are plentiful.

Where in English the verb of the relative clause is in the passive voice, the Japanese language usually prefers a construction with the active verb. Thus, instead of saying "a country which is unknown," they say *shiranu kuni*, *i.e.*, "a (people) not know country"; "a man who is called Denkichi" is in Japanese *Denkichi to ifu mono*, lit. "a person whom (people) call Denkichi."

The construction in which the words tokoro no, "of the place," are inserted between the noun and the verb, as in the phrase "kuru tokoro no hito," "the man of the coming place," i.e. "the man who comes," is an imitation of a Chinese idiom,

and is not found in the more ancient literature. The oldest example of it which the present writer has met with occurs in the Tsure-dzure gusa, a work of the fourteenth century. It is sparingly used even at the present time.

Examples of tokoro as a Relative:—

Kirishitan shiumon to ifu ha That which we call the Nambankoku yori wataru tokoro no jahô nari.

Christian religion is an evil doctrine which came over from the country of the southern barbarians (the Portuguese).

ni kakesasete.

Korosu tokoro no tori wo kubi Having caused the birds which he had killed to be hung about his neck.

NUMERALS.

The Japanese language has two series of numerals, one consisting of words of native origin, and one composed of Chinese words.

30 11	0145.

700		Shichi-hiaku
800	Ya-ho	Hap-piaku
900		Ku-hiaku
1,000	Chi-dji	Sen
2,000	,	Ni-sen
3,000		San-zen
10,000	Yorodzu	Man
30,000		Sam-man
100,000		Oku
1,000,000		$Ch\hat{o}$

The terminations tsu, chi, and dji of the Japanese series of numerals, and perhaps also the dzu of yorodzu, are only different forms of the same particle. They are probably all identical with the genitive suffix tsu. Towo, "ten," does not

take this termination, but it is preserved in the phrase *tsudzu hatachi*, which properly signifies "ten or twenty years of age," although later writers have given it the meaning of "nineteen or twenty years of age."

Yatsu was originally a general word for "a great number." Thus, in the Manyôshiu we have u wo yatsu kadzuke, "keeping large numbers of cormorants." Yaso and yaho are also used in the same sense.

The numerals of the Japanese series above ten are obsolete in the modern language except *hatachi*, *misodji*, &c., as far as *yosodji*, which are still in use, but only with the meaning "twenty years of age," "thirty years of age," &c. *Yorodzu* also remains in use, in the sense of "a very large number," "a myriad."

The mari in towo'mari hito-tsu is amari, "over and above," "in addition," with the initial α elided.

Immediately before a noun, the numeral of the Japanese series is used with a Japanese word, and of the Chinese series with a Chinese word. In this position the Japanese numerals are commonly put in the root form, *i.e.*, without the final syllables *tsu*, *chi*, or *dji*, but the longer form is also used, though more rarely. We may say, for instance, *futatsu tose* as well as *futa tose*, "two years." For numbers above ten, Chinese numerals are used with Japanese words, except in the old language.

In counting, Japanese use the root form, except that instead of hito, futa, they say hi, fu.

Whenever a Japanese numeral does not immediately precede its noun, or where it does not qualify any noun, it is invariably put in the longer form, as futatsu no toshi, or toshi futatsu, "two years"; futatsu tamahe, "give me two."

The words before which Chinese numerals are placed are monosyllabic, and are mostly names of weights or measures, or belong to the class of Auxiliary Numerals described below.

Larger numbers than ten thousand are usually expressed by the help of multiples of *man*, *oku* and *chô* being very rarely used. One hundred and fifty thousand, for instance, is expressed by *jiu-go-man* rather than by *ichi oku go man*.

In numerals consisting of several words, the same order is followed as in English, e.g., sen happiaku roku jiu hachi, 1868.

ORDINALS.

The Japanese language has no separate words for ordinal numbers. They are expressed by prefixing *dai*, or adding *ban me* or $g\hat{o}$ to the cardinal numbers. These particles are usually combined, as in the following examples:—

Dai ni ban me.

No. 2, the second.

Dai hiaku nijiu roku gô. Roku ban ox roku ban me.

No. 126. The sixth.

Sometimes the cardinal numbers are used without addition as *Ansei ni nen*, "the second year of Ansei."

AUXILIARY NUMERALS.

Instead of joining the numeral immediately to the noun, the Japanese language generally prefers to use what I have ventured to call Auxiliary Numerals. They correspond to such English phrases as "six head of cattle," "two pair of shoes," "five sail of ships," which would be in Japanese ushi rop piki, hakimono ni soku, fune go sô. Auxiliary numerals may either follow the noun, as in the examples just given, or they may be placed before it, with the genitive particle no intervening, as futa hashira no kami, "two gods."

The following lists contain the more common of this class of words.

AUXILIARY NUMERALS OF JAPANESE ORIGIN.

Eda (branch), for chôshi, a kettle with a long handle. Furi (brandish), for bills (naginata), swords (tachi), &c. Hane (wing), for helmets.

Hari [stretch], for bows, tents, mosquito-tents.

Hashira pillar), for gods of the Shintò mythology; also, in the older language, for men.

Kake (hang), for cruppers and several other parts of harness.

Kara (empty), for drums.

Kasane (pile, for official clothes.

Kashira (head), for eboshi (a kind of cap) and deer.

Kazari 'ornament), for kammuri, a sort of cap of ceremony.

Koshi (loin), for swords of all kinds.

Kuchi mouth, for saddles, stirrups, and bits.

Kudari, for trowsers.

Kumi (pile), for jiu-bako, sets of boxes piled one on the other. Moto (stem), for plants, and for a large kind of falcon, on account of the perch on which they rest.

Nagare [flow], for flags.

Ori bend), for small boxes.

Saho (pole), for nagamochi, a travelling chest carried on a pole.

Sashi, for mackerel.

Sorohe (set), for horse-gear.

Suhe (seat), for falcons.

Suji (line), for bridles, bowstrings, arrows, girdles, spears.

Tomahi, for storehouses.

Tsugahi (brace). In sending presents of wild geese, wild ducks, swans, and pheasants, they are usually reckoned by tsugahi, or brace.

AUXILIARY NUMERALS OF CHINESE ORIGIN.

Bi (tail), for fish.

Bu (class), for books, or for copies of a book.

Chô (handle), for norimons and jinrikishas, tools with handles, muskets, small drums (tsutsumi), ink sticks.

Chô (stretch), for bows, stringed instruments.

Chô (card), for packets of medicine.

 $F\hat{u}$ (seal), for sealed letters.

Fuku (border), for hanging pictures.

Gu (set), for clothing, &c.

Hai (cup), for cups, glasses full.

Hei (handle), for things with handles, such as uchiwa.

Hiki, for animals, except birds and men.

Ho (ear of corn), for utsubo, a kind of quiver.

Hon (stem), for cylindrical things, as pens, fans, sticks, large fish, spears, whips, &c.

In (number), for officials, &c.

Fiku (roller), for hanging pictures.

Kai (cover), for hats.

Ken (eave), for houses.

Kiaku leg), for chairs and other articles of furniture having legs.

Ko or ka, for things generally, especially where no other auxiliary numeral is in use, as for places, days, months, years, &c. This numeral is placed immediately before the noun, as ik-ka-sho, "one place."

Kwa (ball), for balls.

Kwan (tube), for wind instruments, also pens.

Kwan (roll), for books, also stuffs made up into rolls.

Mai, for flat things, such as sheets of paper, flat fish, clothing. Men (face, surface), for mirrors, cup-stands, ink stones, koto

(a stringed instrument). *Mon* (gate), for cannon.

Nin (man), for men.

Riô (rim), for carriages.

Riô collar), for armour, clothing.

Riu (grain, for pills, grains of rice.

Satsu (vol.), for volumes of a book.

Shiu (burn), for sticks of incense.

Shiu (head), for poems.

 $S\hat{o}$ (boat), for ships.

 $S\hat{o}$ (pair), for pairs of screens.

Soku (foot), for pairs of shoes, stockings, &c.

 $T\hat{\sigma}$ (head), for some animals, as dogs, oxen.

Tsû (communication), for documents.

Wa (feather), for birds.

Wa (bundle), for bundles of grass, straw, grapes, firewood, vegetables, &c.

Examples of Numerals:-

Fune hitotsu tsukuri-tari. Ya-chi-tabi kanashiki.

Sen shi-hiaku ni-jiu-go dora.

Hito tose ni futa tabi. Sanshi menjô sanvô.

Go ka nen no ahida. Miso moji amari hito moji. Hitotsu wo kikite, towo wo shiru.

Ushi ippiki uchi-koroshi, hokani nihiki ubahi-toru. He has made a boat.

Many thousand times lamentable.

One thousand four hundred and twenty-five dollars.

Twice in one year.

Three passports for three men.

For the space of five years. Thirty-one letters.

Hearing one, to know ten.

They killed one ox, and carried away as plunder two others.

The class of na or uninflected words comprises numerous adverbs.* They generally consist of a root, followed by one of the particles ni or to. In some words, however, it is optional to omit the particle, as naze ni or naze, "why"; haru-baru to or haru-baru, "from afar"; and in numerous other cases the root stands alone without any particle, as inishihe, "anciently"; ima, "now"; kon-nichi, "to-day."

The derivation of most words of this class shows that they

^{*} For other classes of adverbs, see under the verb and adjective.

are really nothing more than nouns, as for example *ima*, "now," from *i*, root of *iru*, "to remain," and *ma*, "a space"; *koko*, "here," from *ko*, "this," and *ko*, an old word meaning "place"; *ohokata*, "probably," from *ohoki*, "great," and *kata*, "side," "part."

The root is often reduplicated, sometimes to convey the idea of repetition, as dan-dan, "step by step," "gradually"; tabi-tabi, "frequently"; but oftener merely for the sake of emphasis, as haru-baru to, "from afar"; tsura-tsura, "attentively."

The Japanese language is rich in onomatopoetic adverbs.

Examples:—

Gata-gata, with a rattling noise.

 $D\hat{o}$ -to, with a thud.

Soyoro or soyo-soyo, with a rustling sound.

Futa-futa, with a flapping noise, as of a fan.

Dobun-to, with a plunging sound.

Sara-sara, with a rattling noise.

Examples of na as adverbs:—

Ima ha tayu. It hath now ceased.

Yoso ni shite kofureba kuru- Being away [from him], I shi. pine for love.

Haruka ni miyu. It is visible afar off.

Wadzuka ni hitori futari. Only a few — one or two persons.

Shiba-shiba mo mimaku no The desire to see thee frehoshisa. quently.

Imada koneba. Because he does not yet come.

CONJUNCTIONS.

The Japanese language is sparing in the use of conjunctions. The necessity for them is in some measure

obviated by the Rule (see Chap. IX.) according to which the adverbial form of the verb or adjective is used instead of the conclusive form or attributive form whenever followed by a verb or adjective co-ordinated with it in the sentence. Thus, in the sentence kokoro wo tsukushi, chikara wo kiwamete, ahihataraku-beshi, "you must work together, giving to it all your soul, and devoting all your strength," the circumstance that tsukushi is put in the adverbial form is a sufficient indication that this verb stands in the same connexion with the following verb kiwamete, which is expressed in English by the use of the conjunction "and."

Where in English the conjunction "and" is inserted between two nouns, it is commonly omitted in Japanese. Hiaku-shô chô-nin no antai, "the security of the peasants and townsfolk"; sake sakana, "sake and fish." Most words used as conjunctions are verbs or particles, or combinations of words of these two classes. A few however, are na, alone, or with a particle added.

Ex.: Katsu, and, moreover.

Katsu mata, and again.

Hata, further.

Mata, again.

Mata ha, or.

Hata mata, again.

Motsutomo, still, nevertheless.

The above are placed at the beginning of the clause to which they belong.

Ahida (lit. "space"). because.

Yuye or yuye ni (lit. "cause"), because.

 $J\hat{\sigma}$ (lit. "article"), inasmuch as, because that.

The last three words are placed at the end of the clause

after the verb in the attributive form. They occur very frequently in the modern epistolary and official style.

INTERJECTIONS.

Interjections belong to the class of uninflected words. They require little remark.

Examples of interjections:

Iza! tomoni mi ni yukan.

Ana! omoshiro!

Ana! u yo no naka!

Ahare! ima ha yo ni naki hito no kazu ni irishi ni ya!

Woshi! woshi!

Come! let us go and see it it together.

Oh! how amusing!

Ah! what a wretched place this world is!

Alas! can he have now entered the number of men not of this world!

Hush! hush!

CHAPTER IV.

INFLECTED PRINCIPAL WORDS.

(Kotoba or Hataraki-kotoba.)

This class of words corresponds to the "verb" and "adjective" of the grammars of European languages, but with limitations which will be understood from the following observations. The reader had better at once discard from his mind any notions of the functions of inflection which he may have acquired by the study of European languages. Japanese, inflection has nothing to do with voice, mood, tense, person, gender, number, or case. Instead of a passive voice, Japanese verbs have derivative verbs with a conjugation the same as that of active verbs; mood and tense are indicated by teniwoha or suffixes; person is only occasionally and indirectly intimated by the use of honorific or humble particles; gender is denoted by compounds similar to the English words "he-ass," "she-ass," and number and case are expressed, if at all, by suffixes or particles distinct from the noun, which, as has been already stated, is never inflected.

In the Japanese language, the principal office of inflection, as distinguished from the addition of suffixes, is to give to the same root the force of a different part of speech according to the inflection employed. In Latin, and even in English, inflection has to a limited extent the same function. Thus, for the verbal root fac we have facit, a verb, facere, which is virtually a noun, and factus, which is an adjective, and in English the same root lend appears as a verb in lends, and in the participle lending as an adjective or a noun according to circumstances. The extent to which this system is carried is one of the chief distinctive features of Japanese grammar.

Not only have all *kotoba* (inflected words, *i.e.*, verbs and adjectives) forms in which they appear successively as nouns, adverbs, adjectives, and verbs, but the suffixes indicative of tense, &c., have inflections by which they are affected in the same manner.

Inflection has a second function, viz., to provide bases to which are added the suffixes or *teniwoha*. The form for which the term "Negative Base" has been adopted in this treatise is employed solely for this purpose, and each of the four other forms, although at times a separate and independent word, may also be a mere base to which certain suffixes are attached.

The following table gives a synoptical view of all the inflections of which Japanese principal words or *kotoba* are capable. It should be studied in connexion with the table of terminations given at the close of Chapter VII.

TABLE OF INFLECTIONS.

	ADJECTIVES.	Conjugation I. Conjugation II.	ashiku	ashi	ashiki	ashiku	ashikere
	ADJEC	Conjugation I.	yoku	yoshi	yoki	yoku	vokere
	7	arri, "be" ki, "come" shi, "do" imi, "go away" 10, "good" ashi, "bad"	ini	inn	inuru	ina	типг
	IRREGULAR.	shi, "do"	shi	ns	n.ms	28	sms
	IRRE	ki, " come "	ki	пş	киги	ko .	kure .

	2	Conjugation I. Conjugation II. Conjugation III. kashi, "lend" labe, "eat" mi, "see"	kashi	kasu	kasu	kasa	kase
		ROOT.	Adverb.	Conclusive Form or Verb.	Attributive or Substantive Form.	Base for Neg.	Perfect.

ROOT.

I. The roots of verbs and adjectives are often used as nouns, as yorokobi no amari, "excess of joy"; e-gata no giri, "a meaning hard to apprehend"; shiro no Satsuma jôfu, "white Satsuma fine cloth"; tsukahi, "a messenger." In these examples yorokobi, amari, egata, shiro, and tsukahi are the roots of yorokobu, "to rejoice," amaru, "to exceed," egataki, "hard to apprehend," shiroki, "white," and tsukafu, "to send." It is more convenient, however, to consider these nouns as na derived from kotoba, and they have been accordingly noticed under that head at p. 41.

2. The root is also used in forming compounds, as *kashi-ya*, "a house to let"; *yo-hodo*, "a good deal"; *waru-gashikoki*, "badly-clever," *i.e.*, "cunning."

3. In exclamations the adjective is put in the root form.

PRINCIPAL PARTS OF KOTOBA (VERB AND ADJECTIVE). ADVERB OR ADVERBIAL FORM.

In verbs this form does not differ from the root; in adjectives it is distinguished by the addition of the syllable ku.* As will be seen below, the term "adverb" or "adverbial form" does not cover all the uses to which this form is applied. Sometimes it is a true adverb (1), at other times it is joined to a verb or adjective, but without qualifying it (2), and may therefore still be called an adverb, although not exactly in the ordinary sense of the word, and it is sometimes not an adverb at all, but a noun (3), or merely a base to which suffixes are attached (4).

I. The adverbial forms of adjectives are sometimes adverbs, as hayaku hashiru, "to run fast," atsuku shasuru, "to thank

^{*} The spoken language drops the letter k in this termination, and the contracted form is also frequently found in books of the naka-mukashi, or middle-age of Japanese history, as fo instance the later Monogatari.

warmly." The adverbial forms of verbs have often the same force. For instance, in the sentence chikaku hashiri kitari. "he has come near running," it is plain that chikaku and hashiri both stand in precisely the same relation to kitari. Both words describe the manner of the coming, and are therefore adverbs. It is this use of the adverbial form which has suggested the term applied to it in the Kotoba no Chikamichi, viz., zoku-vô-gen, or "word joined to inflected words."

What we should call compound verbs are often nothing more than verbs preceded in this way by the adverbial forms of other verbs, as buchi-korosu, to "beat-kill," i.e., "to beat to death"; kiri-harafu, "to cut-clear-away," i.e., "to clear away by cutting."

2. A most important function of this form is described in the term invented for it by a native grammarian, viz., ren-vôgen, or "word co-ordinated with inflected words." It is a rule of Japanese syntax that when two or more kotoba are coordinated in the same sentence, the last only receives the inflection which properly belongs to all, those which precede being placed in the adverbial form. [See below, Chap. IX.]

In compound verbs the first element is sometimes coordinated with the second in this way, as yuki-kaheru, "to go and return."

3. The adverbial form may be a noun, as in the following examples:-

Furuku yori.

From of old.

Kore wo tanomi ni te. Trusting in this.

4. A number of the teniwoha are added to the root-form as a base. [See below, Chapters VI. and VII.]

CONCLUSIVE FORM.

This form has been termed variously by Japanese writers kiruru kotoba, zet-tei-gen, or sai-dan-gen, literally "cutting,"

"determining," or "decisive word." These epithets have reference not only to the force of the conclusive form, which is the same as that of our indicative mood, but to the position which it always occupies at the end of a sentence. Strictly speaking the conclusive form is not of any tense. In the sentences kaha nagaru, kaha fukashi, the properties "flowing" and "depth" are predicated of the river without reference to time, and it is only from the context that one can judge whether time past, present, or future is intended. But as the past and future are generally indicated by suffixes, the present tense is in the majority of cases the most suitable translation for the conclusive form of verbs or adjectives Thus, in the absence of any indication to the contrary in the context, the above phrases would be translated "the river flows," "the river is deep," although it is quite possible that the context may render it desirable to translate them "the river flowed," or "the river will flow," "the river was deep," or "the river will be deep."

The want of a proper system of punctuation in Japanese books often renders it difficult for the student to distinguish where one sentence ends and another begins. The only remedy for this lies in his making himself familiar with the conclusive forms both of verbs and adjectives, and of the inflected tenixoha or suffixes.

Examples of Conclusive Form:-

Nochi no hito no sadame wo matsu.

Kono teniwoha ni futa kokoro ari.

Kono hataraki-kotoba ito ohoshi.

Ohomune ya ni onaji.

I await the decision of posterity.

This suffix has two meanings.

These inflected words are very numerous.

Its general meaning is the same as that of γa .

A few adverbs are obtained by reduplicating the conclusive forms of verbs. Ex.: Osoru-osoru, "tremblingly"; yuku-yuku, "as time goes on," "while on our way."

*For the suffixes to this form, see Chaps. VI. and VII.

ATTRIBUTIVE OR SUBSTANTIVE FORM.

This form is denominated in the *Kotoba no Chikamichi zoku-tai-gen*, or "word joined to nouns," *i.e.*, "adjective," and other names of a similar purport have been invented for it by other native writers on grammar.

I. This form may be an adjective. In the case of verbal roots, it then corresponds to the participle in *ing* of English verbs, but it may oftener be translated by placing the verb in a relative clause. Like the conclusive form, it is of no tense, and the context must decide whether, in translating it, the present, past, or future tense should be employed.

There is an ambiguity in the use of this form as an adjective which a glance at the context is generally sufficient to remove. *Matsu hito*, for instance, may mean either "the man who is waiting" or "the man for whom I wait"; *shiru*

^{*} The conclusive form has almost entirely disappeared from the modern form of the spoken language, its place having been usurped by the attributive form. An exception is <code>nashi</code>, the conclusive form of the negative adjective, which is not unfrequently used in the spoken language, although <code>nai</code> (a contraction of the attributive form <code>naki</code>) is more common. In some of the provincial dialects the conclusive forms of adjectives are still in use. This change in the construction of Japanese is well worthy of the attention of students of language. It is as if we gave up the use of the indicative mood, and used participles instead, saying, for instance. "he dying" or "his dying" instead of "he died," "his being killed" instead of "he was killed." The sensation headings of American newspapers, and the verbless sentences of telegrams and advertisements, show that English is not altogether free from the same tendency. For the manner in which this change was brought about in Japanese, see Chap. V., under the particles <code>no</code> and <code>ga</code>.

hito may be either "the man who knows" or "the man I know"; arigataki kokoro may be either "a thankful heart" or "a heart for which one should be thankful."

Examples of Attributive Form as Adjective:-

Noki chikaku tobu hotaru.

The firefly that flies near the eaves.

Ohan to susumu toki.

When he started in pursuit. [Lit., the time of his starting to pursue.]

Inuru jiu ichi nichi. Yuku he naku. The past 11th day.

Tametomo no yuku he shirezaru koto. Without any place to go to.

His not being able to learn
where Tametomo had gone
to.

Yoki hito. Uwo ohoki kaha. A good man.

A river in which fish are plentiful.

2. This form has, as a noun, two significations. Kasu, for example, may mean either "the person or thing who lends' or "the act of lending"; yoki may mean "good persons or things" or it may mean "goodness." In other words, kasu may be the equivalent either of kasu mono or of kasu koto; yoki may correspond in meaning to either yoki mono or yoki koto. It will be observed that in neither of these senses has the attributive form the same meaning as the root, which may also be used as a noun.

Examples of Attributive Form as Noun:-

Zoku-tai-gen yori ukuru ha.

Those (teniwoha) which are attached to the attributive form.

Tatsutoki mo iyashiki mo.

Both noble and mean persons.

Hodokosu ni mo, shimatsu ni

Kami ichi mai ni te mo sutšuru zvo osorete.

Kono ji wo mochiyuru ha avamari nari.

Hi no hikari ni sono hire wo hiramekasuru ha hata 200 furu ga gotoshi.

Wadzurahashiki made ohoshi.

Both in liberality and in economy.

Fearing the throwing away of even a single sheet of paper.

The use of this character is an error.

Its causing its fins to glisten in the sunlight is like the waving of a flag.

They are numerous unto troublesomeness. [I.e., They are so numerous as to be troublesome.]

3. This form takes the place of the conclusive form when preceded by zo, ya, or an interrogative, by a rule which is explained in Chapter IX.

Examples:-

Otonashi-gaha to zo tsuini It is as the river Otonashi nagare-idzuru. Kove zo medetaki.

that it at last flows out. It is this that is beautiful.

4. The suffixes which may be attached to this form as base are given below. [See Chaps. VI. and VII.]

BASE FOR NEGATIVE AND FUTURE SUFFIXES.

This base never constitutes a complete word by itself. It is only found associated with the negative and future suffixes. It is termed, in the Kotoba no Chikamichi, shô-zen-gen, or "future form," and is opposed to the ki-zen-gen, or "past form," as the perfect is termed in the same treatise. The San-in-kô says that this form imada shikarazaru ni mochiyu, "is used for events which have not yet taken place," a description which seems more appropriate than the shô-zen-gen of the *Chikamichi*, as it would apply to the negative as well as to the future.

For the suffixes attached to this base, see Chaps. VI. and VII.

PERFECT.

In the modern written language, verbs of the first conjugation have a perfect formed by adding aru to the root, the final i of which is contracted with the initial a of aru into e. Thus kaku, "to write," has a perfect kakeru (for kaki + aru), "to have written"; ifu, "to say," has a perfect iheru (for ihi + aru), "to have said."

In the most ancient literature we find a form from which the final syllable ru of this form has disappeared,* and there it is not confined to verbs of the first conjugation, but is also in use, although with some changes, for verbs of the other conjugations and for adjectives. It is this form which is in the present treatise called the perfect, the ki-zen-gen of the Chikamichi. The perfect form is used in the following ways.

I. In the most ancient literature† it stands by itself as a perfect, as

Inishihe no hito ni ware are ya? Have I been one of the men of old?

Ikani omohoshimese ka? What has been his thought?

- 2. When preceded by koso, it takes the place of the conclusive form. Hence it has been called by a native gram-
- * There are several other instances of the disappearance of the ru final of the verb aru and its derivatives. In the written language miyezaru nari is often written miyezanari, and in the spoken language we have ta (the termination of the past tense) for taru, kirci-na for kirci naru, waruka (Nagasaki dialect) for waruku aru, and attakke (Yedo dialect) for ari-tari-keri.
- \dagger The perfect form me of the future suffix n or mu is occasionally met with in modern writers.

marian koso no musubu kotoba, or "form joined with koso." [See Chapter IX.]

Examples :--

Kore koso tama nare.

It is this, and not anything else, which is the jewel.

It is rice only that is good.

Yone koso vokere.

- 3. The most familiar use of this form is as the base to which are added the conditional and concessive particles *ba*, *do*, and *domo*. It retains, however, its force as a perfect, as may be seen by comparing such forms as *yukeba*, "since he has gone" or "if he has gone," with *yukaba*, "if he went" or "if he should go."
- 4. In the first conjugation of verbs, and in the irregular verb aru,* this form coincides with that of the Imperative Mood.

Example:-

Yuke, "go!" nakare, "let it not be."

* For the mode in which the Imperative is formed in other conjugations, and when combined with a negative, see under the suffixes yo, na --so, and na.

The following table shows the formation of the Imperative, both Positive and Negative, in the different conjugations:—

	VERB.	POSITIVE IMPERATIVE.	NEGATIVE IMPERATIVE.
1st Conj. 2nd Conj. 3rd Conj. Irregular Verbs.	kasu	kase	kasuna or na kashi so
	taburu	tabe yo	taburuna or na tabe so
	miru	mi yo	miruna
	aru	are	nakare
	kuru	ko yo	kuna or kuruna
	suru	se yo	suna or suruna
	inuru	ine	inuruna or na ini so

CONJUGATIONS.*

There are three conjugations of verbs and two of adjectives. First Conjugation of Verbs.—To this conjugation belong the great majority of underived verbs. It is distinguished by having a form for the negative base distinct from the root,

* Of the three conjugations of Japanese verbs, the first is evidently the original one.

The third consists entirely of verbs with monosyllabic roots. If these verbs had been inflected according to the first conjugation, the vowel of the root would have been obliterated in every part of the verb except the adverbial form, a loss which could be ill afforded in words consisting of only two letters. To avoid this the letter r has been inserted between the root and the characteristic vowel endings of the attributive, conclusive, and perfect forms, so that we have, for instance, instead of mu mu me, miru miru

There are a few other verbs with monosyllabic roots whose inflections, no doubt partly from the same cause, resemble to some extent (and in the Yedo spoken language are identical with) those of verbs of the third conjugation. One of these verbs is uru, "to get," which is conjugated thus: Adv. e, concl. u, attrib. uru, neg. base e, perfect ure. Uru may in fact be considered a slightly irregular verb of the third conjugation. will be seen by referring to the Table of Inflections that the principal parts of uru are identical with the terminations of verbs in e of the second conjugation, and there is every reason to conclude that all such verbs are composed of a root followed by this verb uru. This is plainly the case with Passive and Causative Verbs, which constitute the large majority of verbs of this conjugation. Korosaruru, "to be killed," is obviously nothing more than korosu-ari-uru, i.e., "get-be-kill"; korosasuru, "to cause to kill," is koroshi-shi-uru, i.e, "get-make-kill." The Derivative Transitive and Intransitive verbs, such as adzukuru, "to give in charge" (really to get taken charge of), miyuru, "to be visible," may be easily shown to contain the same element, and an analysis of the remaining verbs in e of this conjugation will generally reveal it. The number of those whose roots end in i is comparatively small, and many of them may also be inflected according to the first conjugation. They are also plainly derivatives, but it may perhaps be doubted whether the final uru

and by the circumstance that the inflections involve no increase in the number of syllables of the root.

Second Conjugation of Verbs.—The number of underived verbs of this conjugation is small, but it comprises all passive and causative verbs. The Japanese grammarians make two conjugations of it, drawing an unnecessary distinction between verbs whose roots end in i and those whose roots end in e.

In the second conjugation the root and the negative base are identical in form, and the attributive form and the perfect contain one syllable more than the root. In the spoken language of Yedo, and sometimes in the modern written language, the attributive form and perfect of verbs in *i* of this conjugation terminate in *iru*, *ire*, and the same forms of verbs in *e* end in *eru*, *ere*.

Third Conjugation of Verbs.—The third conjugation differs from the first in having the negative base the same as the root, and from the second in having the conclusive undistinguishable from the attributive form. The following list contains all the verbs of this conjugation. It will be observed that they have without exception monosyllabic roots. In this conjugation the older language often attaches to the adverbial form the tenixoha which belong properly to the conclusive form.

Kiru, "to clothe"; niru, "to resemble"; niru, "to boil";

is the verb uru, "to get," or some other verb with a monosyllabic root, as, for instance, iru, "to remain."

It may be observed that the spoken language of the east of Japan, by omitting the conclusive form and preserving the vowel of the root in the attributive and perfect forms (having *eru iru*, *ere ire* instead of *uru*. *ure*), makes the second conjugation agree entirely with the third. It is not improbable that in this case the spoken forms are really older than those of the literary language.

The above remarks may be summed up by saying that the First is the *Original* conjugation; the Second, the *Derivative* or *uru* conjugation; and the Third, the *Monosyllabic* conjugation.

hiru, "to dry in the sun"; hiru, "to winnow"; hiru, "to sneeze"; miru, "to see"; iru, "to shoot with a bow"; iru, "to melt"; iru, "to dwell"; keru, "to kick."

IRREGULAR VERBS.

Aru, "to be." The conjugation of aru differs from that of verbs of the first conjugation in the conclusive form only, which is ari instead of aru. The latter form is, however, retained as a base for the suffixes (except to, which is rather a conjunction than a suffix proper) of the conclusive form. Like aru are conjugated oru, haberu, and imasokaru, and the suffixes into the composition of which aru enters, viz., keru, taru, zaru, meru, naru, and seru.* The imperative of aru is are, and the negative imperative nakare (for naku-are).

Kuru, "to come." In this verb the suffixes shi and shika, which in other verbs it is the rule to append to the root-form, are more usually, though not invariably, attached to the negative base ko. The imperative of kuru is ko, but modern writers have often koyo or koi. The negative imperative is

kuna, or in the later language kuruna.

Suru, "to do." Like suru are conjugated ohasuru, "to be," and the numerous compounds of suru, as hi-suru, "to compare"; ji-suru, "to decline" or "refuse"; shô-zuru, "to produce," &c., &c. The suffixes shi and shika are never found attached to the root-form of this verb, viz., shi, but always to the negative base se. The imperative of suru is seyo. The negative imperative is suna or suruna.

Inuru, "to go away." Like inuru is conjugated shinuru, "to die," and also the suffix nuru, which is nothing more than inuru with the initial i elided. Inuru has the imperative ine. Later writers have sometimes inevo.

^{*} Saru for sa-aru) and shikaru (for shika-aru) are, of course, also conjugated in the same way as aru.

CONJUGATIONS OF ADJECTIVES.

Most adjectives are of the first conjugation; the second conjugation includes those adjectives only whose roots end in *shi* or *ji.** The native grammarians are of opinion that the ending *kere* of the perfect is compounded of *ki*, the termination of the attributive form, and *are*, the perfect form of *aru*, "to be." The old forms *yokemu*, *yokedomo*, which are found in the *Manyôshiu*, perhaps stand for *yoki-aramu*, *yoki-aredomo*, and are additional instances of the loss of the letter *r* of the verb *aru*, "to be." (See above, note to page 88).

Only a few of the suffixes are attached immediately to the different parts of adjectives. The verb *aru* generally comes between.

DERIVATIVE VERBS.

I. Derived from na or Nouns.

Verbs are derived from na—

- I. By adding the termination ru, as Yadoru, "to lodge"; from yado, "a lodging."
- 2. By adding mu, maru (intrans.) or muru (trans.) as Haramu, "to become pregnant"; from hara, "the belly." Tsukamu, "to grasp"; from tsuka, "a handle." Inamu, "to refuse"; from ina, "no." Kiwamaru, "to reach a limit"; from kiwa, "edge." Kiwamuru, "to push to an extreme"; from kiwa, "edge."
- 3. By adding gu, as Tsunagu, "to tie"; from tsuna, "a rope."

^{*} The reason why the conclusive form does not add shi in the second conjugation is obviously because the root already ends in shi (or ji, which is the same thing in Japanese), and the repetition of the same syllable is disliked. In other respects the second conjugation is the same as the first, and if this difference is only remembered, the student need not trouble himself about the second conjugation of adjectives.

4. By adding nafu, as

Ajinafu, "to taste"; from aji, "taste."

Tomonafu, "to accompany"; from tomo, "company."

Mahinafu, "to bribe"; from mahi, "money."

5. By adding fu, as

Utafu, "to sing"; from uta, "song."

6. By adding burn (root bi), as

Inaburu, "to refuse"; from ina, "no."

Otonaburu, "to be of full age"; from otona, "a full grown person."

7. A good many derivative verbs are formed by adding to nouns the verb *suru*, "to do," the initial *s* of which often takes the *nigori* and becomes *s*. In the great majority of these verbs the root is a Chinese word. In the later language those verbs of this class in which the initial *s* of *suru* takes the *nigori* often follow the spoken form of verbs of the second conjugation in *i* for the Attributive, Neg. Base, and Perfect, as, for instance, *ansuru*, "to reflect," which is conjugated thus:—

	OLD CONJ.	NEW CONJ.
Adverb	anji	anji
Concl. Form	ลทรน	ansu
Attributive	anzuru	anjiru
Neg. Base	anse	anji
Perfect	ansure	anjire

Examples of derivatives of suru:—

Ron-zuru, modern form ron-jiru, "to argue."

Mei-suru, modern form mei-jiru, "to command."

Omon-zuru (for omomi-suru), modern form omon-jiru, "to esteem."

Karon-suru (for karomi-suru), modern form karon-jiru, "to despise."

These last two verbs are derived from the nouns *omomi*, *karomi*, which contain the roots of the adjectives *omoki*, "heavy," and *karoki*, "light." [See above, p. 41.]

Hi-suru, "to compare."

In this example the letter s does not take the *nigori*, and the conjugation of *suru* is therefore retained even by modern writers.

8. By adding meku, as

Kara-meku, "to have a Chinese look"; from Kara, "China." Fuyu-meku, "to have a wintry look"; from fuyu, "winter."

II. Derived from Verbs.

I. Intransitive and Transitive Verbs.—In English there are seldom distinct words or forms for the intransitive and transitive applications of the same verbal root. Thus the words ride, sink, break, bend, and many others are either transitive or intransitive according to circumstances. In such cases the Japanese language has usually two distinct verbs containing the same root.

These verbs are formed in several different ways, sometimes the transitive from the intransitive form (I.), sometimes vice versâ (II.), and sometimes both from an obsolete verb

containing the common root (III.).

Intransitive must be distinguished from passive verbs. For instance, *kiruru*, the intransitive form of *kiru*, "to cut," should not be confounded with *kiraruru*, the passive form. The latter only is properly translated "to be cut." *Kiruru* means

"to possess the quality cut," i.e., "to be discontinuous." It conveys no idea of passivity or of being acted upon either from without or by the subject itself. Many of these verbs are best translated with the help of adjectives terminating in able and ible. Ururu, kiruru, &c., are exactly rendered by the French se vendre, se couper, &c.

The following examples illustrate the various modes in which transitive and intransitive verbs are formed from one another.

INTRANSITIVE.

1st Conjugation.

Shirisoku, "to retreat." Tatsu, "to stand."

Susumu, "to advance." Yamu, "to cease."

1st Conjugation.

Ugoku, "to move."

Odoroku, "to be astonished."

Kawaku, "to dry."

Oyobu, "to extend."

Wataru, "to cross over."

Kaheru, "to return."

Nokoru, "to remain over."

1st Conjugation.

Yoru, "to approach."

Noru, "to mount." 3rd Conjugation.

Niru, " to be like."

2nd Conjugation.

Kikoyuru, "to be audible."
Kiruru, "to be discontinuous."

TRANSITIVE.

I. 2nd Conjugation.

Shirizokuru, "to drive back."

Tatsuru, "to set up."

Susumuru, "to encourage."

Yamuru, "to cease."

1st Conjugation.

ist Conjugation.

Ugokasu, "to move."

Odorokasu, "to astonish."

Kawakasu, "to dry."

Oyobosu, "to extend."

Watasu, "to send over," "to

deliver over."

Kahesu, "to send back."

Nokosu, "to leave."

2nd Conjugation.

Yosuru, "to bring near."

Nosuru, "to mount."

2nd Conjugation.

Nisuru, "to counterfeit."

wishin, to confidence.

II.

1st Conjugation.

Kiku, "to hear."

Kiru, "to cut."

INTRANSITIVE.

2nd Conjugation.

Kudakuru, "to crumble."

Tokuru, "to melt."

2nd Conjugation.

Miyuru, "to be visible."

1st Conjugation.

Tsugaru, "to be continuous."

2nd Conjugation.

TRANSITIVE.

1st Conjugation.

Kudaku, "to crush to pieces."

Toku, "to melt."

3rd Conjugation.

Miru, "to see."

1st Conjugation.

Tsugu, "to join."

III.

Oruru, "to descend."

Okuru, "to rise."

Idzuru, "to go out."

Niguru, "to flee."

Obiyuru, "to start with alarm."

Suguru, "to pass," "to be excessive."

Ist Conjugation.

Tasukaru, "to have help."

Sadamaru, "to be fixed."

Kawaru, "to change."

2nd Conjugation.

Shirakuru, "to become white or feeble."

Noburu, (root nobi), "to stretch."

Ist Conjugation.

Orosu, "to let down."

Okosu, "to raise."

Idasu, "to put out."

Nigasu, "to let flee."

Obiyakasu, "to frighten."

Sugosu or sugusu, "to pass,"

"to exceed."

2nd Conjugation. Tasukuru, "to help." Sadamuru, "to fix." Kafuru, "to change."

2nd Conjugation.

Shiraguru, "to make white."

nobi), "to Noburu (root nobe), "to stretch."

The transitive verbs terminating in *su* or *suru*, although differently inflected from *suru*, "to do," have no doubt been formed by adding this verb to the root. Indeed, the modern language often conjugates them like *suru*, and we meet with such forms as *watase-shi* instead of *watashi-shi*, *tsukahasure-domo* instead of *tsukahasedomo*. The verb *masu*, so common in the spoken language, is one of the verbs which has been affected in this way. In the older language it is a verb of

the first conjugation, but in the later and spoken language its inflections have been assimilated to those of *suru*. The terminations *aru* and *uru* of the above table are no doubt the verbs *aru*, "to be," and *uru*, "to get." The conjugation, however, of those in *aru* is regular.

In the examples given below we have pairs of transitive verbs containing the same root. Those in the second column may seem at first sight to be merely the causative forms of those in the first column. They are really the transitive forms corresponding to intransitive forms which in most cases have ceased to exist, or perhaps never have existed. Kasu, for example, does not mean "to cause to borrow," but "to make borrowed," i.e., "to lend"; misuru is the transitive form corresponding to the intransitive miyuru, "to be visible," and does not mean "to cause to see," which would be misasuru. The fact that these forms never have a honorific sense shows that they are not regarded as causative verbs.

Karu, "to borrow."

Sadzukaru, "to receive."

Adzukaru, "to take charge of."

Satoru, "to understand."

Tamaharu, "to receive."

Kiru, "to wear."

Miru, "to see."

Kasu, "to lend."

Sadzukuru, "to give."

Adzukuru, "to give in charge."

Satosu, "to acquaint."

Tamafu, "to give."

Kisuru, "to put on (clothes)."

Misuru, "to show."

2. Causative Verbs. The causative forms of verbs may be obtained by the following empirical rule.

RULE. For verbs of the first conjugation, and the irregular verbs aru and inuru, add to the negative base suru (root se) or in the modern language shimuru (root shime).

For verbs of the second and third conjugations, and the irregular verbs *kuru* and *suru*, add to the negative base

sasuru (root sase), or in the modern language shimuru (root shime).

EXCEPTION. Verbs with monosyllabic roots add *seshi-muru*, the causative of *suru*, to the root. *Suru* itself is, of course, an exception.

Examples:-

1st Conjugation.

Mamoru, "to guard."

Korosu, "to kill."

2nd Conjugation.

Yasuru, "to become lean."

Tadzunuru, "to look for."

3rd Conjugation.

Miru, "to see."

Mamorasuru or mamorashimuru, "to cause to guard." Korosasuru or korosashimuru, "to cause to kill."

Yasesasuru or yaseshimuru, "to cause to become lean." Tadzunesasuru or tadzune-

shimuru, "to cause to look for."

Misasuru or miseshimuru, "to cause to see."

All causative verbs have their roots terminating in e, and are of the second conjugation.

The causative forms are very commonly used instead of the original verbs in a honorific sense. The reason is that, according to Japanese ideas, it is considered polite to represent the man of rank as surrounded by vassals and attendants, whom he *causes* to execute his commands.*

- 3. Passive Verbs. The passive forms of verbs may be obtained by the following empirical rule:—
- * In suru, sasuru, or shimuru, the terminations of causative verbs, it is easy to recognize the elements suru (root shi), "do," and uru, "get." The passive terminations ruru and raruru are evidently composed of the verbs aru, "be," and uru, "get."

RULE. For verbs of the first conjugation, and the irregular verbs aru and inuru, add ruru (root re) to the negative base.

For verbs of the second and third conjugations, and the irregular verbs *kuru* and *suru*, add *raruru* (root *rare*) to the negative base.

Examples:--

ACTIVE.

Kasu, "to lend."
Taburu, "to eat."
Miru, "to see."
Aru, "to be."
Kuru, "to come."
Suru, "to do."
Inuru, "to depart."

PASSIVE.

Kasaruru, "to be lent."

Taberaruru, "to be eaten."

Miraruru, "to be seen."

Araruru, "to be able to be."

Koraruru, "to be abletocome."

Seraruru, "to be done."

Inaruru, "to be able to depart."

All passive verbs have their roots terminating in e, and are of the second conjugation.

In the case of intransitive verbs these forms have a potential signification, as in the examples *koraruru*, *inaruru*, cited above, and the passive forms of transitive verbs may have a potential as well as a passive signification. *Miraruru*, for instance, may be "to be seen" or "to be able to see." The potential often merges into a honorific sense, it being thought more respectful to say that a man "has been able to do something" than simply that "he has done something." The passive forms of causatives are very frequently used as honorific substitutes for the original verbs. A familiar example of this is *araseraruru*, the passive of the causative of *aru*, a form much used in speaking of the Emperor.*

Examples of Transitive and Intransitive, Causative and Passive Verbs:—

^{*} The Kotoba no Kayohi-ji, Vol. I., is the best native authority on the subject of intransitive and transitive, causative and passive verbs.

Ko wo womina ni adzukete yashinahasu.

Hi no naka ni uchi-kubete yakase tamafu ni, mera mera to yakenu.

Hi ni kubete, yakitari.

Sashi kosareshi (honorific use of passive) edzumen.

Tenchi no ahida ni umaruru mono.

Kwôtô kawarase (honorific use of causative) tamafu koto nashi.

Tami yasukare to asana yuna inorase tamafu koto.

Hito no kokoro wo tanoshi-

Onore ga tamashihi wo nusumarete.

Hito ha mihenu nari.

Having given the child in charge to a woman, he caused her to nourish it.

When he caused (his attendants) to burn it by throwing it into the middle of a fire, it burned away with a blaze.

He burnt it by placing it on the fire.

The map which you have been good enough to send me.

Creatures born between heaven and earth.

The imperial line of descent has never changed.

(The Emperor's) praying every morning and every evening that his subjects may have ease.

To give pleasure to the hearts of men.

Being robbed of his own soul.

There is no one to be seen.

4. In the *Manyôshiu* and *Kojiki* there are found many verbs which differ from the ordinary forms of the same verbs by having *aru*, *afu*, or *asu* instead of the *u* final, or by being lengthened in other ways:—

Examples:-

Tsutsushimaru for tsutsushimu, "to be quiet and respectful."

Kakusafu for kakusu, "to hide." Nabikafu for nabiku, "to bend." Nagekasu for nageku, "to lament." Tsumasu for tsumu, "to pluck."

These seem to be merely poetical forms, of the same meaning as the original verbs.

III. Derived from Adjectives.

1. By adding mu to the root.

Ex.: Shironu, "to become white"; from shiro, root of shiroki, "white."

Kuromu, "to become black"; from kuro, root of kuroki, "black."

The lengthened forms *shiromaru*, *kuromaru*, &c., are also found. The corresponding transitive verbs end in *muru* (root *me*), as *shiromuru*, "to make white," *nagamuru*, "to lengthen," "to gaze upon."

2. By adding ru to the root.

Ex.: Shigeru, "to be dense"; from shigeki, "dense."

Nigaru, "to feel bitterly"; from nigaki, "bitter."

The final vowel of the root is sometimes changed, as in Asuru, "to be shallow"; from asaki, "shallow."

Katsuru, "to be hard"; from kataki, "hard."

The last two examples are, however, verbs of the second conjugation.

3. By adding garu to the root. These verbs are chiefly

formed from the desiderative adjectives ending in taki.

Ex.: Yukitagaru, "to wish to go"; from yukitaki, "desirous of going."

Hoshigaru, "to be eager for"; from hoshiki, "eager." Ayashigaru, "to think strange"; from ayashiki, "strange."

Garu is no doubt compounded of ge, the termination of nouns described at page 42, and aru, "to be." These verbs

are, however, not conjugated like *aru*, but as regular verbs of the first conjugation. They must not be confounded with the combinations so frequently met with of the adverbial form of adjectives with *aru*. *Hoshigaru*, for instance, must be distinguished from *hoshik'aru*.

COMPOUND VERBS.

The first element of a compound verb may be a noun or an adjectival root, but is more commonly a verb in the root form. The first element of a compound may stand to the other—

1st. In the relation of an object direct or indirect.

Ex.: *Tabi-datsu*, "to start on a journey." *Mono-gataru*, "to relate."

2nd. In the relation of an adverb qualifying it.

Ex.: Ni-korosu, "to boil to death."

Seme-hairu, "to enter with violence."

Buchi-korosu, "to beat to death."

Atsu-gohetaru kinu, "thick clothing."

3rd. It is sometimes co-ordinated with it.

Ex.: Yuki-kaheru, "to go and return."

Nige-chiru, "to flee and scatter," "to be put to the rout."

DERIVATIVE ADJECTIVES.

I. Derived from na.

1. By adding *rashiki*. These adjectives have a similar signification to English adjectives in *ish*. They belong to the later language.

Ex.: Kodomo-rashiki, "childish"; from kodomo, "a child." Baka-rashiki, "foolish"; from baka, "fool."

2. By adding shiki or jiki.

Ex.: Hanahadashiki, "extreme"; from hanahada, "very."

Hitoshiki, "uniform," "similar"; from hito, "one."

Kohishiki, "beloved"; from kohi, "love."

Adjectives in *shiki* often reduplicate the root for the sake of greater emphasis.

Ex.: Hakabakashiki, "efficient."

Chinese roots sometimes take this termination.

Ex.: Bi-bi-shiki, "splendid"; from bi, "beauty."

3. By adding keki. Keki is a poetical form. It simply changes an uninflected word into an inflected word, and does not alter the meaning. Thus tahirakeki, from tahira, means "level," "flat," and is the same as tahira naru of the ordinary written language, or tairana of the spoken language.

Such forms as naga-keku, samu-keku, where keku (never keki) follows the root of an adjective, have an entirely different character, and must not be confounded with the adjectives

just described.

II. Derived from kotoba.

1. By adding *shiki* to the root, the vowel of which is usually modified at the same time.

Ex.: Konomashiki, "lovable" · from konomi, root of konomu, "to like."

Isogashiki, "busy"; from isogi, root of isogu, "to be busy," "to be in a hurry."

Osoroshiki, "dreadful"; from osori, root of osoru, "to dread."

All verbs have derivative adjectives formed by adding *taki* to the root, and *beki* and *majiki* to the conclusive form, but it is more convenient to include these terminations among the *tenizvoha*.

COMPOUND ADJECTIVES.

The first element of a compound adjective may be either a noun, a verb in the root form, or the root of another adjective.

Examples of Compound Adjectives:-

Na-takaki, "famous"; from na, "name," and takaki, "high." Te-bayaki, "dexterous"; from te, "hand," and hayaki, "quick."

- Kiki-gurushiki, "harsh"; from kiku, "to hear," and kurushiki, "painful."
- Nogare-gataki, "inevitable"; from nogaruru, "to escape," and kataki, "difficult."
- Shi-yasuki, "easy to do"; from suru, "to do," and yasuki, "easy."
- *Ųsu-akaki*, "light red"; from *usuki*, "thin," and *akaki*, "red."

CHAPTER V.

UNINFLECTED TENIWOHA SUFFIXED TO NA.

I. Case Suffixes.

Genitive, no, ga, tsu, " of."

Dative, Locative, Instrumental, ni, "at," "in," "to"; nite, "in," "by means of"; he, gari, "towards"; made, "as far as."

Accusative, wo.

Vocative, yo, ya, yayo.

Ablative, yori, kara, "from."

II. Plural Suffixes.

Ra, domo, tachi, gata, bara, nado, shiu, tô.

III. Other Suffixes.

Ha (read wa), Distinctive or determinative particle. Mo, "also," "even."

Ka, Interrogative.

Kana. Exclamatory.

Ya, Interrogative and Exclamatory.

Nan, Emphatic.

 Z_0 , do.

Koso. do.

To. Conjunctive.

Dzutsu, "each."

Dani, "at least."

Sura, "even."

Sahe, "even."

Shi, "only."

Nomi, bakari, "only."

Gachi, "all over."

Nagara.

Datera.

Many of the *tenizvoha* in this chapter may be suffixed not only to *na*, but to those parts of *kotoba* and inflected *tenizvoha* which are capable of being treated as substantives, viz., the adverbial form and the attributive form.

I. CASE SUFFIXES.

There is no suffix to distinguish the nominative case. As shown below, ha and ga do not indicate the nominative.

Genitive or Possessive Particles.

No, ga, tsu, " of."

The distinction between no and ga resembles that between the English preposition of and the s added to form the possessive case. This is probably what the Japanese grammarians mean when they tell us that ga no yori omoshi, i.e., "ga is heavier than no," the possessive relation being looked upon as a closer one than the partitive relation.

In the classical period ga was used only after the substantive forms of verbs and a few other words, chiefly pronouns, as, for instance, ta ga, wa ga, kimi ga, imo ga, chichi ga. and no are in later times used without much distinction. Thus hana ga saku and hana no saku mean precisely the same, viz. "the unfolding of the flowers." There is, however, a tendency in the Japanese language to treat phrases of this kind as if they contained an assertion, and hana no saku or hana ga saku are sometimes met with in poetry in the sense of "the flowers unfold." In the spoken language the last-named meaning has become much the more usual one in the case of ga, and so entirely has the proper force of that particle been forgotten in these cases that it is either considered a sign of the nominative case, or is omitted altogether. This construction—viz., the attributive form with or without ga—is now used in speaking to the exclusion of the conclusive form, which has passed out of use both for verbs and adjectives. Thus for midzu nagaru, "the water flows," the spoken

language has midzu ga nagaruru (or oftener nagareru) midzu nagaruru, or midzu wa nagaruru; for hana ha shiroshi, "the flower is white," hana ga shiroi (for shiroki) or hana wa shiroi. [See above, page 85.]

In the later part of the classical period there are instances where ga with a pronoun of the first person seems to imply humility, and with pronouns of the second or third person, contempt or disparagement; but this use of ga is unknown in the more ancient language, and also in its modern form.

No (not ga) is used where the same thing is meant by the two nouns which it joins, or where one is a part of the other as in the examples Yamato no kuni, "the province of Yamato," chichi no Dainagon, "her father the Dainagon," sono toshi no natsu, "the summer of that year."

A noun is sometimes omitted after no if it can be easily supplied from the previous clause, as hito tsuma to ware no, "some one else's husband (or wife) and mine." Tsuma is of course to be supplied after no.

No frequently occurs in the ancient poetry in the sense of no gotoki or no gotoku, "like," as tori no muragarite matsu, "to wait assembled in a flock like birds."

Tsu (sometimes dsu) is an old word for the genitive particle. It is obsolete in the modern language except in onodzukara, midsukara, "of or by oneself," and a few other words.

Examples of Genitive Particles:-

Tsuki no yo, yuki no ashita. A moonlight night, a snowy morning.

Taregashi ga muko ni naru. To become such a one's sonin-law

Ono ga waruki koto no sange. The confession of one's own sins.

Saki no kami mo, ima no mo. Both the former lord, and the present one.

Miyako he to Omofu mo mono no Kanashiki ha Kaheranu hito no Areba nari keri.

Ima no yo no hito no monoseru fumi uta wo miru ni.

Oki tsu shiranami.

ni michimureha

Waga naku namida,
Nuru ga uchi ni,
Itsutsu no mutsu.
Seikan kô ga kotoba ni,
Yuku midzu no hayaku
(poetical).
Kimi kofuru namida no toko

Fuyu-gare no
Mori no kuchi-ba no
Shimo no uhe ni
Ochitaru tsuki no
Kage no sayakesa.
Matsu hito no kon ya koji ya
no sadame nakereba.

Even with our joyous anticipations of returning to the capital is mingled the sad thought that there are some who never will return. [In this sentence it is necessary to supply from areba the substantive form aru.]

In reading the prose and poetical compositions of the men of the present day. The white waves of the open sea.

The tears which I weep. During my sleep. Five times six. In the words of Seikan. Swift as running water.

As the tears of longing for thee have filled my couch. [In this phrase no joins namida with michinuru, which must be supplied from michinureba.]

Oh! the brightness of the moonlight that falls on the hoar-frost of the decayed leaves of the winter-withered woods!

As there is no certainty as to whether he whom I expect will come or not.

Haru ha kagiri no nakaramashikaba.

The tsu dori.

Haru no suhetsu kata.

If there were only no end to spring.

The house-bird, i.e., the cock-The latter part of spring.

Dative, Locative, and Instrumental Cases.

Ni, "at," "in" or "to," "into," "by"; ni te, "by," "by means of"; he and gari, "towards"; made, "as far as," "until"

Ni is sometimes the sign of the dative case, as in the following examples:-

Ware ni misevo.

Hito ni adzukuru.

Show me.

To give in charge to some one.

Ova ni niru. To be like one's parents.

In the following examples ni means "to," "in," or "into."

Yokohama ni yuku. Yokohama ni woru.

Hako ni iruru.

To go to Yokohama. To live in Yokohama.

To put into a box.

Ni has the meaning of "along with" in the following example:-

Obana ga kaze ni niha no Along with the wind through tsuki-kage.

the obana (a kind of grass) the moonlight in the courtvard.

In such expressions as isami ni isamite, "full of eagerness" (lit., "along with eagerness being eager"), ni has the same force.

The instrumental case is represented by the noun followed by ni te. This is the equivalent of wo motte of the modern semi-Chinese style.

Ex.: Chi ni te chi wo arafu. To wash away blood bv blood.

Ni is sometimes apparently the root of an obsolete verb nu, "to be." Ni te, for instance, may mean "being" as well as "in," and naru (ni + aru) may mean "to be" as well as "to be in." Ni te is then the equivalent of de atte of the spoken language.

Examples:-

Onore ha Chôin no hotori ni saburafu okina ni saburafu.

Ika naru hito?

Wadono tachi ha idzuku no hito-bito ni ka? Kono atari ni te.

Kono atari ni te. Fudokoro naru fue. I am an old man who resides in the neighbourhood of Chôin.

What manner of man! [Lit., a how being man.]

What country-men are ye, my masters?

In this neighbourhood.

A flute which was in his bosom.

Ni may often be conveniently regarded as the sign of the predicate of a proposition.

In the semi-Chinese style wo shite or wo motte sometimes takes the place of ni, as shinra wo motte nani nani wo shira-shimuru, "to make so and so known to your servants."

Ni is added to indeclinable words to form adverbs, as jiki ni, "quickly"; muri ni, "violently," "wrongfully."

Ni is used with causative verbs to distinguish the person who is caused to perform the action, and with passive verbs to indicate the person by whom the action is performed. The phrases used in the *Kayohi-ji* for "causative" and "passive" are examples of this use of ni.

Ta ni shikasasuru.

Ta ni shikaseraruru.

Causing another to be or do so and so.

Being caused by another to be or do so and so.

Other examples of ni:-

Makoto ni.
Sumiyaka ni.
Mutsu ni wakaruru.
Idzure no toki ni?
Uta yomu ni.
Kane ni naru.
Dai ni tsukuru.
Onodzukara naru mono ni
shite.

Sore ni. Koto ni yorite. Oya ni kandô seraru. In truth.

Immediately.

To be divided into six.

At what time?

In composing poetry.

To become metal.

To make into a table.

Making it to (i.e., accounting it) a thing which is produced of itself.

In addition to that.

According to circumstances.

He was disowned by his parents.

To is sometimes used in the same signification as ni in the example kane ni naru quoted above.

Ex.: Hito to naru, "to become a man," "to attain to manhood."

He, "towards."

He not being considered a separate word from the noun to which it is joined is pronounced e by the rule given at p. 2. It is really a noun meaning "place," "direction," as in ihe, "a house," from i, root of iru, "to dwell," and he, "place"; yuku he, "the direction in which to go." It has taken the nigori in the compounds hamabe, "the shore"; nobe, "the moor"; umibe, "the sea-side."

He is often confounded by careless speakers and writers of Japanese with ni, "to." The former is properly used only of motion in the direction of, the latter of motion up to. Thus kita he yuku, "to travel northwards," is the correct expression, and not kita ni yuku.

Example of he:—

Mine he fumoto he ori nobori.

Sometimes ascending towards the summit, sometimes descending towards the base.

Made indicates a limit arrived at, and may be translated "until," "as far as," "as much as," "as many as," "to such a degree," &c.

Examples:-

Jiugo nichi made.

Karasu no atama shiroku naru made.

Yokohama made.

Michi mo naki made.

Until the 15th.

Until a crow's head becomes white

As far as Yokohama.

To such a degree that there was no road.

Gari is an old word occasionally found in poetry. It has the same meaning as he.

Examples of gari:—

Kimi gari.

Hito no gari ifubeki koto arite funi wo varu.

Hashi wo uma koshiganete, kokoro nomi imo gari yarite, wa ha kokoni shite. Towards you.

Having something to say to some one, I send a letter.

My horse being unable to cross the bridge, I remain here, my heart alone I send towards thee.

Accusative Case.

IVo, the ordinary sign of the accusative case, was probably in its origin an interjection of the same meaning with the English "O!" It has this sense in sono yahe gaki wo! "O! that eight-fold barrier!" a phrase which occurs in one of the oldest extant specimens of the Japanese language.

In the *monogatari* we find instances of wo as an interjection in answer to a call or command, something like the English

"Halloa!" or "Aye, aye, Sir!"

Example:—

Wo to te (for to ihi te) tachinu. "Aye, aye, Sir," said he, and started off.

Intermediate between its use as an interjection and as the sign of the accusative case may be placed those instances where voo seems to be merely an emphatic particle, of much the same force as a significant emphasis or pause over the word. This is perhaps why Motowori calls it a vasumetenizvoha or "pause particle" when used in this way.

Example:—

Samidare no

Tsuki no honokani

Miyuru yo ha,

Hototogisu dani

Sayaka ni wo nake.

Wo has here the force of drawing attention to the antithesis between the faint shining of the moon and the distinct singing of the bird.

The same wo is also found after verbs.

Example:—

Yomosugara

Mite wo akasan

Aki no tsuki:

Ko-vohi no sora ni

Kumo nakaranan.

The wo here marks an emphasis on mite.

Akin to this force of wo is its meaning in sentences like the following:-

Shira-tsuvu no

Iro ha hitotsu wo-

Ikani shite

Aki no konoha wo Chiji ni somuran? Of the clear dew

The colour being but one— How then can it be that

The leaves of autumn

A thousand-fold it dyes?

On this night, when the moon of the 5th month is faintly, do thou, at any rate, O, hototogisu!

sing distinctly.

All night long

Having seen thee I would

watch till morning

O moon of autumn!

On the sky of to-night

May there be no cloud.

Wo has in this case an adversative force very much like the English "but," "though," "notwithstanding."

Mono wo. When wo follows mono, preceded by a verb or adjective in the attributive form, it has commonly the meaning just described.

Example:—

Miyako idete Kimi ni ahan to Koshi mono wo— Koshi kahi mo naku,

Wakarenuru kana.

Setting forth from the capital, That I might meet you, I have come hither, but My coming having been fruitless, Alas! we are parted.

By far the most common use of wo is as the sign of the accusative case. This case is, however, by no means invariably indicated by wo. It is not found when the noun is governed by a preposition, or when it forms, along with a governing verb, an equivalent to a single verb, as in $ri\delta ji$ survet to treat medically," kemi surve, "to examine," and is omitted in many other cases. In fact it is only used when it is desired, to mark distinctly the case of the noun.

Examples of wo.

Kono ko wo mitsukete nochi ni take wo toru ni fushi wo hedatete yogoto ni kogane aru take wo mitsukuru.

Takara wo ushinahi, yamahi wo mauku (pron. môku). Kono chigo yashinafu hodo ni. [Accus. without wo].

Wo is frequently found in preposition would be used.

After discovering this child in collecting bamboos, he every night found bamboos containing gold on separating the joints.

He loses his money, and contracts disease.

In proportion as they nurtured this infant.

Japanese where in English a

Examples:—

116

Miyako wo tohomi.

Hito wo wakaru.

Ohoji wo yorobohi yukite.

The being distant from the capital.

To part from some one.

Staggering *along* the high road.

Ô-dan wo yamu.

To be sick of jaundice.

Other particles sometimes come between the noun and wo, as—

Kushi to kanzashi to wo nuku. To remove comb and hairpin.

Kore bakari wo shiru. He knows this only.

In poetry, and in the semi-Chinese style, wo is sometimes seen at the end of a sentence. In such cases an inversion of the construction has taken place, or an ellipsis has to be filled up.

Example:—

Hisokani negafu—yûshi kono tairi ni gyaku sezaran koto I humbly pray that the officials will not oppose this great principle.

Wo ba. The ba of this combination is the ordinary distinctive particle ha with the nigori. Both particles have here their ordinary meaning.

Example:-

Hito tsuku ushi wo ba, tsuno wo kiri, hito kufu taka wo ba, mimi wo kirite, sono shirushi to su.

We cut off the horns of an ox which butts at people, and cut the ears of a falcon which bites people, as a mark of their vice.

It will be observed that the last sentence is an example of a double accusative, a construction familiar to us in Latin and Greek.

In the semi-Chinese style wo mochite (motte) or wo shite is often put for ni or wo only.

Vocative Case.

The vocative case is rarely indicated by any specific particle, but when necessary one of the particles yo, ya, or yayo may be added to the noun. Example:—

Jinta yo! Jinta yo! to yoba- He never ceased calling out, hite yamazu. "Jinta! Jinta!"

Ablative Case.

Yori, kara, "from," "since." Yori is the root of the verb yoru, "to approach," "to relate to," but this meaning is forgotten in its familiar use as a suffix meaning "from." Yo and yu are ancient poetical forms for yori. Yori may be translated "than" when used in phrases like the following, where in English the comparative degree of the adjective is employed: sakura yori mume ha hayaku saku "the plum blossoms earlier than the cherry." Kara cannot be used for yori in such a position.

Kara does not differ in meaning from yori. It is curious that whereas it has become nearly obsolete in the later written language, the spoken language uses it almost to the exclusion of yori.

In the old language *no* is often put between *kara* and its noun, the reason being, no doubt, that *kara* was originally a noun itself. A similar construction is observable in the compounds *te-dzu-kara* and *ono-dzu-kara*, "of oneself."

Kara ni of the old language does not differ in meaning from kara alone.

Mono kara has much the same force as nagara, as in the following example:—

Itsuhari to

Omofu mono kara—

lma sara ni

Taga makoto wo ka Ware ha tanoman? False

While I think it.

Just now

In whose truth

Shall I put my trust?

Examples of yori and kara:

Mukashi yori.

Muma kuruma yori otsuru.

Ohosaka yori.

Oya yori ukuru.

Kore kara.

Kohishiki yori ha, uki ha

mono ka ha? Kore yori hokani.

Fune no he yu mo tomo yu mo.

On inochi voo rochiu ni suterarubeki yori. From antiquity.

To fall from a horse or car-

riage. From Ôsaka.

To receive from one's parents.

From here.

Compared with love, is misery aught?

Other than this.

Both from the ship's stem and stern.

Rather than fling away your life into the road.

II. PLURAL SUFFIXES.

Ra may be used either with persons or with things, as arera, "they"; korera, "these things"; nanjira, "you." Ra implies neither respect nor the reverse. It is therefore little used with nouns or pronouns in the second person.

In the old language there are instances of ra joined to nouns in the singular. For instance, the $Many \delta shiu$ has kora, imora where only one person is meant. This is, however, exceptional.

With adverbs of place, ra gives an idea of greater indefiniteness. Kokora, for instance means "hereabouts"; achira, "somewhere there."

Domo (from tomo, "a companion") is a very common plural particle in the old language, where it is used for both persons and things, as *mushi-domo*, "insects"; *koto-domo*, "things." In the modern language it is mostly found with pronouns or nouns (not inanimate things) in the first or third person.

In the modern language watakushidomo and midomo are sometimes used where only one person is meant.

Tachi (in the later language also dachi) is used with nouns or pronouns in the second person, or in speaking respectfully of any one, as miko tachi, "princes"; oya tachi or oya dachi, " parents."

Gata (from kata, "side") is similar in meaning to tachi.

It belongs to the later language.

Ex.: Omahe-gata, "you."

Bara is little used.

Examples:-

Hôshi bara no ni san nin.

Two or three priests. Men and women.

Otoko zvomina hara

Nado or nando (from nani to) is sometimes called a plural particle. Its meaning is rather that of the Latin et cetera.

Examples:-

no yôi wo shite.

Kaze no oto, mushi no ne nado ito ahare nari.

Shokudai, tsukue, kôro nando

The sound of the wind, and the cries of the insects, &c., are very touching.

Having made ready candlestick, table, incense-pot, &c.

Shiu is a Chinese word which is sometimes found in the later language as a plural particle, as kodomo shiu, "children"; vakunin shiu, " officials."

 $T\hat{\sigma}$ is sometimes a plural particle, and sometimes, like *nado*, resembles the Latin et cetera.

Examples:-

Môri Daigaku no Kami tô.

Môri Daigaku no Kami and others.

Sho hanshi tô.

Samurai of the various Han.

 $S\hat{u}$ and sho. The plural is implied by the use of such Chinese prefixes as sû or su, "several"; sho, "various," but the combinations of these particles with monosyllabic Chinese words, as in su-nin, "several persons," sho-koku, "the various countries," belong to Chinese rather than to Japanese grammar. Examples of Plural Particles:-

Kodomo ra or kodomo shiu. Children.

Nanjira. You.

Aru tokoro no samurahi domo. The samurai of a certain place.

Kono hito domo wakaregataku omofu.

I felt it hard to part with these men.

III. OTHER SUFFIXES.

Ha. This particle is not looked upon as a separate word from the noun to which it is joined, and is accordingly read wa, according to the rule by which aspirates are not pronounced in the middle of a word. [See page 22.]

Ha may be termed a separative or distinguishing particle. Its force is thus described in the Kotodama no Shirube: "Ha ha isasaka nageku kokoro wo obite, mono ni mare, koto ni mare, aru ga naka yori eri-wakuru yô no kokoro moteru teni-woha nari." I.e., "Ha has somewhat of an exclamatory force, and is a particle which possesses the meaning, as it were, of choosing out and separating a thing or an action from amongst a number."

In English, ha may sometimes be translated "with respect to," "in the case of," "in so far as regards," "at any rate," or its meaning may be given by printing in italics the word to which it refers. The French "quant à" expresses its force pretty accurately. In most cases, however, ha cannot be rendered in translation, and its force is often so slight that its presence or absence makes no appreciable difference in the meaning. In speaking, a significant emphasis is often the best equivalent.

Ex.: Ware ha to omohi. Kore to ha chigafu. Kono tokoro he ha kitarazu, Thinking *I* (am somebody). It is different from this. He has not come here at any rate.

Ha has been called the sign of the nominative case. It is quite true that it often does distinguish the subject of a sentence, but this is merely by virtue of its general force as a distinguishing or separating particle. A suffix which is used freely with nouns in the dative or objective case cannot properly be described as the sign of the nominative.

Examples:-

Toki shiranu yama ha Fuji The mountain which knows no ne (nari). Ken ha kwako wo utagafu kotoba nari

not time is the peak of Fuji. Ken is a word which expresses a doubt concerning the past.

In the phrase Akashi no ura ha? "In regard to the Bay of Akashi?" or "What about the Bay of Akashi?" ha looks like an interrogative particle. The sentence is, however, really incomplete, and some such words as ika naru tokoro naru? "What sort of a place is it?" require to be supplied. In Sono fumi no kotoba ha to tofu, "'What is the language of that letter?' asked he," a similar ellipsis has to be filled up.

Ha is used not only to single out an object from among a number, but to contrast or oppose one object to another. The Greek $---\mu\epsilon\nu$ would accordingly be in Japanese --ha--ha

Examples:—

Hito ha isa! Kokoro mo shirazu: Furuzato ha Hana zo mukashi no Ka ni nihohi-keru.

Miyama ni ha Matsu no yuki dani Kienaku ni

Its people—ah no! I know not their hearts; But in my native place The flowers with their ancient Fragrance are odorous.

Deep in the mountains E'en the snow on the fir trees Has not yet meltedMiyako ha nobe no Wakana tsumi-keri.

On the moors by the capital We have plucked the young herbs.

In the first of these two sentences the *has* point the contrast between the inhabitants and the place itself; in the second, between the mountains where the season is late, and the capital where it is early.

When ha is suffixed to an interrogative word or particle, it shows that the question is merely rhetorical, and not for information, and that a negative answer is expected. But if the question already contains a negative, an affirmative reply is suggested. Thus, while ikaga sen merely puts the question, "What is to be done?" which may or may not be merely rhetorical according to the context, ikaga ha sen is only another way of saying "there is nothing to be done," "there is no help for it." In the same way Ware hitori ka? "Am I the only person?" may be either a question asked for information or an indignant way of denying that one is the only person. But if we say ware hitori ka ha, the question can only be a rhetorical one, and the answer "No!" necessarily follows.

This rule holds good throughout the greater part of Japanese literature. In the pre-classical period, however, ha is found with interrogatives without any meaning of this kind, and the rule is not often exemplified in modern literature, which is comparatively sparing in its use of particles.

Examples:-

Kohishiki yori ha uki ha mono ka ha? Nuru ga uchi Miru wo nomi ya ha Yume to ihan— Hakanaki ya wa na

Hakanaki yo wo mo Utsutsu to mizu. Compared with love, is misery aught?

Shall we call that alone a dream which we see while sleeping?—this vain world also I look not upon as reality.

Namida ya ha! Mata mo afubeki Tsuma naran— Naku yori hoka no

Nagusame zo naki.

Itsu ka ha mafushi ayamaritaru?

What? Tears! He is doubtless a husband whom I shall meet again—
Other than weeping Consolation I have none.
When did I ever inform you wrongly?

In the later language *ani* at the beginning of an interrogative clause shows that a negative reply is expected.

The case suffixes and the interrogative particles ka and ya are placed between ha and the noun. Where wo intervenes, ha takes the nigori and becomes ba. This is owing to the dislike which the Japanese language has for allowing two successive syllables to begin with the same consonant.

Example:--

Hito tsuku ushi wo ba, tsuno wo kiri; hito kufu taka wo ba, mimi wo kiru. We cut off the horns of an ox which butts at people; we cut off the ears of a falcon which bites people.

Mo is the opposite of ha. Kore ha, for instance, means "this separated or distinguished from something else"; kore mo means "this along with something else," and may be translated "too," "also," "even."

Examples:—
Kono hô ni mo.
Uhe ni mo iheru gotoku.
Sono koro made mo.

Sono koro made mo. Ifubeki ni mo arazu. On this side also.

As has been stated above also. Even up till that time.

It is not necessary even to mention.

Where *mo* is repeated with each of two successive nouns the meaning is "both—and—."

Example:—

Kono yo mo, nochi no yo mo. Kozo mo kotoshi mo. Both this world and the next. Both last year and this year. Mo after an interrogative particle has often a force opposite to that of $h\alpha$ in the same position, and indicates that an affirmative answer is expected if the question is affimative, and a negative answer if the question is negative in form. For example—

Tayuru hi arame ya ha? is "Will there be a day when it will cease? [by no means]" but Tayuru hi arame ya mo? is "Will there ever be a day when it will cease? [I trust so]."

A somewhat similar use of *mo* is where it converts interrogative pronouns and adverbs into indefinite. Thus by the addition of *mo*, *tare*, "who," becomes *tare mo*, "any one;" *itsu*, "when," becomes *itsu mo*, "at any time," "always;" and *nani*, "what," becomes *nani mo*, "anything."

Especially in the old language *mo* is in many cases nothing more than a feeble interjection of surprise for which there is no adequate English equivalent.

Example:-

Kakaru hito mo yo ni ide

Even such a man is a thing which appears in the world, *i.e.* There *are* such men as this in the world.

Mo is contracted with are, the imperative of aru, "to be," into mare, as in the phrase Idzure ni mare, "Be it whichever it may"; Mi mare mizu mare, "Be it that I see, be it that I do not see," i.e. "whether I see or not."

Mo ga mo or mo ka mo, mo ga na, mo ga mo na express a strong desire.

Examples:-

Amabashi no nagaku mo ga mo.

Takaku tobu

Tori ni mo ga mo (narite)

I pray that the bridge of heaven may last long.

A high-soaring
Bird—Oh! that I could
become.

Asu vukite

Imo ni kotodohi.

Otoko mo womina mo ikade As both men and women toku miyako he mo ga na to omofu kokoro areba.

That I might go to-morrow And visit my love.

were eager to reach the capital as soon as possible.

The case suffixes and the interrogative particles ka and γa are placed between mo and the noun.

Ka and ya. In Japanese no change of construction is required in order to convert an affirmative clause into an interrogative one. All that is necessary is to suffix one of the particles ka or ya.

The force of ka or ya varies somewhat according to circumstances, being referable to one of the following heads:-

- I. A question for information.
- 2. A merely rhetorical question.
- 3. A doubt.
- 4. A mere exclamation, of much the same force as the sign "!"

 $K\alpha$ is chiefly used in the first sense, but is also common in meanings 2 and 3. Followed by mo, it occurs in the Manyôshiu as a mere interjection. In the combination kana it has also usually an exclamatory force, though it occasionally retains its interrogative meaning.

Ya seldom marks a question asked for information; its force is almost entirely restricted to the other three heads.

Examples of ka:—

I. Kono hito ni ko ha aru ka, naki ka?

Konnichi ka?

2. Kono kado no mahe yori shi mo wataru mono ka? Sono kinsei gaen subeki ka?

Has this man children or not?

Is it to-day?

How is it possible for me to pass before this door?

Is one to agree to this prohibition?

3. Kahabe no hotaru ka; ama no taku hi ka?

Idzure no ohon toki ni ka ariken.

Mitsu ka hitotsu ka ni te mo aran.

4. Osoroshiki kana! Kanashika kana!

Hito no kokoro oroka naru mono kana!

Mikasa no yama ni ideshi tsuki ka mo!

Examples of ya:-

 Migi ha ika naru jiko naru ya?

Jichô ya aru?

- 2. Ani kore wo sassezaru-beken ya?
- 3. Hana ya momiji wo miru.

Kore ya to omofu. Oya ya shinrui. Saru ni mo ya rui subeshi.

Ame tsuyoku shite, hashi ochikeru ni ya—

4. Ana! mendô ya! Ureshi ya! Jinta ya! Is it a firefly on the river bank, or a fire kindled by the fishermen?

In what august time (*i.e.*, reign) will it have been? [I do not know.]

It may perhaps be three or one.

How dreadful! How lamentable!

Alas! what a stupid thing the heart of man is!

The moon that hath come forth over the mountain of Mikasa!

What is the cause of this?

Have you an attendant?

Is it likely that he does not perceive this?

To look at the flowers or red leaves of autumn.

I think it is perhaps this.

Parents or relations.

He is perhaps to be classed even with monkeys.

Whether it was that the bridge had fallen on account of heavy rains—

Oh! what a bother! How joyful! Jinta! vama.

Mimasaka ya! Kumenosara Mimasaka! Nay, rather let me speak of the Kumenosara mountain.

Ka added to interrogative pronouns and adverbs usually, but not always, makes them indefinite, as tare, "who," tare ka, "somebody," itsu, "when," itsu ka, "at some time or another." At the end of a clause which begins with an interrogative, Motowori rules that ka is the proper particle to use and not va, except the latter has its exclamatory force, as nani zo va? "What is it?" In the modern language, however, little attention is paid to this rule, and especially in indirect interrogative clauses, va is almost always found instead of ka.

In the modern semi-Chinese style va often represents the Chinese 11, especially after the opening words of a chapter or paragraph. It has here its exclamatory force, and draws the attention of the reader strongly to the subjectmatter which is about to be discussed. Thus an article on adoption begins as follows: Yôshi no shiukwan taru ya-"With regard to the custom of adopted children—"

Ya followed by aran (fut. of aru) is usually contracted into yaran, which in the spoken language, and occasionally in the popular written style, is further shortened into vara.

Nan is probably the same particle as the na, nâ, nô or ne (Yedo dialect) of the spoken language. It is an emphatic exclamation drawing the attention strongly to the word which precedes. It resembles, but is a less emphatic word than zo. Nan is perhaps the future of the obsolete verb nu, "to be," inserted parenthetically in the sentence. Namo is an old form which occurs in the Manyôshiu and other old books.

Examples of nan:—

Kore nan sore to utsuscmin kashi.

Kore nan ume to shirimuru.

I would like to see this exchanged for that.

I found that this was a plum.

Katachi yori ha kokoro nan Her heart was more excellent than her beauty. masari-taru.

Zo is an emphatic particle. The Kotodama no Shirube describes it as "a particle which limits and narrows things, or represents them, as it were, taken up and held in the hand," and adds that "it is opposed to ya in meaning." Very often the best way to translate zo is to change the construction of the sentence in the manner shown in the following examples.

Examples of zo:-

Oya no kokoro yasume-shidzumete so mata ide ni keru.

and calmed his parents' hearts that he again went

It was not until he had quieted

Kore zo tadashiki yomizama 110111

It is this that is the correct mode of reading.

Kara no uta ni mo kaku zo arubeki

This is probably true in the case of Chinese poetry too.

Koso resembles zo in meaning, but it is a still more emphatic word. It is probably derived from ko, "this," and so, "that." The Ayuhisha says of the sentence yone koso yokere, "it is rice and rice only that is good," that yone no hoka ha nashi to ifu nari, i.e., "this is saying that there is nothing else but rice (that is good)." The same authority further says of koso that it has the force of choosing out and rejecting other things, and of taking up in the hand and looking at the object to which it refers. Kore koso may therefore be translated, "This and nothing else," "This more than aught else," "This very thing." Koso and nan are very common particles in the naka mukashi, or later classical period, but are less frequently met with in the modern language.

Koso is sometimes seen at the end of a sentence. In such

cases a verb has to be supplied after it.

Examples:-

Ahi-min koto nomi koso (omohe).

Hana chirazu ari koso (hoshikere).

Examples of koso :-

Yorodzu no yamahi ha sake yori koso okore.

Mukashi ha "ame no shita" to nomi koso ihere.

Tsutsu ha tsu no teniwoha wo kasanetaru mono ni koso are.

Hôrai no ki ka to koso omohitsure.

Masame ni kimi wo ahi-miteba koso, waga kohi yamame. I think of naught else but meeting him.

My whole wish is that the flowers may not become scattered.

It is strong drink alone from which all diseases spring.

In ancient times, the only form of expression was "ame no shita."

Tsutsu is nothing more than a reduplication of the suffix tsu.

I had imagined that it was doubtless *none other* than the tree of Mount Hôrai.

Not until after I have seen you face to face will my longing cease.

To is a conjunctive particle. With nouns it may mostly be translated "and," "with," "along with," as in the examples kare to ware, "he and I," kimi to yuku, "to go along with you."

Analogous to the use of to with verbs as equal to the English conjunction "that" in introducing indirect narration is its use after nouns when followed by one of the five verbs miru, "to see"; kiku, "to hear"; omofu, "to think"; suru, "to do"; and ifu, "to say." To ifu is often contracted, especially in poetry, into tefu (pron. chô), chifu (chiu), or tofu (tô). To often stands after nouns where one of the five verbs mentioned above must be supplied in order to complete the sense. Thus

to te often stands for to ihite or to omohite; to yo for to miyo or to seyo; to zo for to ifu zo; to naraba for to ifu koto naraba; to dani for to ifu koto dani, &c.

Where adverbial expressions are formed by adding to to uninflected words, as in haru baru to, "from a distance," hiso hiso to, "quietly," shite is to be understood after to.

Taru, preceded by a noun, as in the phrase shiujin taru hito, "a man who is a master," is a contraction for to aru. This form is rarely found in poetry, and never occurs in the more ancient language.

Examples of to:-

Hito no kotoba to midzukara no kotoba.

Kore to chigafu.

Ame to furu (poetical).

Yuki to chiru sakura no hana.

Natsu to aki to. Rusui to sadamuru. Oya to miru. Ko taru (for to-aru) mono.

Dzutsu means "at a time," examples:—

Hitori dzutsu iru.

Tori no ko towo dzutsu. Mina ni yotsu dzutsu atayuru. Another's words and one's own words.

It is different from this.

To fall like rain.

The cherry flowers which scatter like snow.

Both summer and autumn.

To appoint rusui.

To regard as a parent.

One who is a child.

"apiece," as in the following

To enter, one person at a time.

Young birds ten at a time.

To give them all four apiece.

Goto ni, "each," "every"—as tabi goto ni, "every time"; tsuki goto ni, "each month."

Dani with an affirmative means "at least," "at any rate," "if no more," and with a negative, "even," "so much as." It is used where something less than might have been expected is spoken of, as in the following examples:—

Sore wo mite dani kaherinan.

Moji to ifu mono wo katachi wo dani mitaru koto mo nakari-ken.

Ichi monji dani shiranu mono.

Ke hito suji wo dani ugokashi tatematsuraji,

Sura may also be translated "even," but it is used where something is introduced more than might have been expected, as in the examples:—

hair.

Haruka no nochi, Nara no koro no sho ni sura. Seijin sura. Long after, even in writings of the Nara period. Even a holy man.

I will return after having seen that at any rate (having

Probably not so much as the

A person who does not know even a single letter.

I will not move even a single

shape of what are called characters had been seen.

expected more).

Sahe (pronounced saye) is connected with the verb sofuru (root sohe), meaning "to associate," "to join to," and in the old language it means "also," "in addition," as in the examples:—

Hito futa no

Me nomi ni arazu:

Itsutsu mutsu

Mitsu yotsu sahe ari—

Suguroku no sae,

Hannen amari nôgiô wo nasazu, ihe ni mo rôbô sahe ari. Not only are there the sides one and two: there are also five, six, three, and four—the dice of the backgammon board.

He had done no cultivation for more than half a year, and in addition he had an aged mother in the house.

In the colloquial language and in the later written language, sahe is used instead of dani and sura.

Shi is a particle of very little meaning which is sometimes found after nouns. "Only" is a little like it.

Examples of shi:-

Kimi kofuru namida shi nakuha

Shika shi araba.

Onore shi.

Hôshô no ori shi mo.

If there were only no tears of longing for you.

If this were only so.

Even at the time of the Emperor's death.

By themselves.

Nomi and bakari, "only," "no more than."

Examples:-

Wutsu bakari

Only six. You only.

Kimi nomi.

Bakari is derived from hakaru, "to weigh," and originally meant "quantity," in which sense it is frequently used by old writers, as in the example Hito bakari hishashiki ha nashi, "there is no animal so long-lived as man."

The style imitated from the Chinese puts nomi at the end of a sentence in a meaningless way. Motowori condemns this.

Gachi or gachi ni, also gochi, "all over."

Examples:-

Hige gachi ni yase-yase naru A lean fellow all over beard. otoko.

Suzuro ni namida gachi nari.

Hana hirake-hatezu, tsubomi gachi ni miyu.

She became unconsciously bathed in tears.

The flowers have not 1111folded completely, but seem all over buds.

Nagara means that the object to which it applies is taken without any change or modification.

Examples:-

Tabi no sugata nagara.

In his travelling dress as he

Tsuyu wo eda nagara miyo,

Look at the dew as it lies on the branch.

Datera resembles nagara in meaning.

Example: Oi-bito datera, "old man as he is."

Gatera, "by way of." Example: Katami gatera to okosetaru koromo, "the clothing sent by way of keepsake."

CHAPTER VI.

UNINFLECTED TENIWOHA SUFFIXED TO KOTOBA.

This chapter gives an account of the more common suffixes attached to inflected words, classified according to the part of the verb or adjective to which they are joined. Some suffixes are attached to more parts of the verb than one, but in such cases there is a difference of meaning or application. It is to be noted that these particles may be added not only to the principal parts of verbs or adjectives, but to the corresponding parts of those teniwoha which admit of inflection.

It is impossible to notice all the different combinations of teniwoha. Some of the more common are explained in the following pages, and it is believed that the others will present little difficulty to the student who has mastered the meaning

of the several teniwoha of which they are composed.

Few teniwoha are joined immediately to adjectives. The auxiliary verb aru is usually interposed. Thus for hoshikuzu we must say hoshikarazu, "he is not desirous"; for yoku keri, yokari-keri, &c. In such cases the u final of the adjective is elided.

The initial consonant of those particles which are added to the negative base and to the perfect takes the *nigori*; particles added to other forms remain unchanged.

I. UNINFLECTED TENIWOHA ADDED TO THE ADVERBIAL FORM.

The adverbial form is sometimes a noun, and as such may be followed by most of the particles described in the previous chapter. Amongst those which occur most frequently in this position are *ni*, *ha*, *mo*, *to*, and *nagara*.

Ni. The commonest signification of ni following a verb in this form is "in order to," as in the phrases mi ni, "in order to see"; yebi ni kitareri, "he came to summon." Ni also occurs after the adverbial form in such idiomatic phrases as akire ni akirete, "extremely amazed"; isami ni isamite, "very eager."

Ha. When ha follows the adverbial form of adjectives, it has sometimes the same meaning as it has when suffixed to nouns, *i.e.* that of a distinctive or separative particle. It may also have the meaning "if" (conditional future), but in that case ba is more commonly written.

Examples:-

Sono katana nibuku ha araji.

Nawo nogare-gataku ha.

Onajiku ha waga shomô no katana tamaharitenya. That sword will not be *blunt* (whatever else it may be).

A thing which it is still more difficult to escape from.

If it will be the same (to you), will you please give me the sword which I desire.

Ha after zu, the adverbial form of the negative suffix, has the force of a conditional, as $y\hat{o}$ sezu ha, "if one did not take care," but in this position most later writers prefer to write ba.

Ha after te, the adverbial form of the suffix tsuru, has its

ordinary force as a separative particle.

Mo is frequently found with the adverbial form of both verbs and adjectives. Here it may usually be translated "even." It is particularly common after te, as shiri-te mo, "even knowing," iki-te mo, "even having gone." Mo sometimes comes between the two parts of a compound verb, as ihi mo oharazu, "not even finishing what he was saying."

To is found with the adverbial form of verbs in idiomatic phrases like ari to aru, "as many as there are," kiki to kiku hito, "all who may hear."

Nagara has a similar meaning after verbal roots to that which it has after nouns.

Examples:-

Umare nagara no katawamono.

I nagara teki wo matsu.

I nagara no ikusa. Yorube to ha omohi nagara. In the same state in which he was born, a cripple, *i.e.*, a cripple from his birth.

Remaining at rest to await the enemy.

A defensive warfare.

Though still looking on it as a source of help.

Gatera, "by way of." Ex.: Imashime gatera ni ifu koto "something said by way of reproof."

Gachini or gochini. With verbs, this suffix may be translated "constantly."

Examples:-

Kaheri-mi gachi ni ide tamahinu.

On naka mo hedatari gachi ni te.

Mono home gachi.

He went away constantly looking behind him.

Being also constantly on bad terms.

Always praising things.

The following particles are found in conjunction with verbs only.

Tsutsu indicates that the action of the verb to which it is joined is simultaneous with that of the verb following. When tsutsu occurs at the end of a sentence, as it often does in poetry, an ellipsis must be supplied, or the order of the sentence has been inverted. The Kotodama no Shirube thus distinguishes between tsutsu and te: "The sentence Otoni kiki te kohi-wataru is equivalent to Otoni kiki te nochini kohi-wataru, but Otoni kiki tsutsu kohi-wataru is equivalent to Otoni kiku to onaji toki ni kohi-wataru."

Examples of tsutsu:—

Aru mono to (omohite) wa- At the same time that he forsure tsutsu, naki hito zvo tofu.

Midzu no uheni asobi-tsutsu urvo rvo kufu.

surface of the water.

after dead persons.

gets and thinks that they

are still alive, he mouires

It feeds on fish at the same time that it sports on the

--mi --mi resembles the --tari --tari of the spoken language.

Examples:-

Haremi kumorimi.

Nakimi warahimi.

Kaminadzuki furumi furazumi sadame naki shigure zo fuyu no hajime naru.

Becoming alternately clear and cloudy.

Alternately weeping smiling.

It is the unsettled, showery weather of the tenth month. sometimes rainy, sometimes fine, which is the beginning of winter.

---tsu ---tsu also corresponds to the ---tari ---tari of the spoken language.

Example:-

Ikusa ha kiritsu suru mono nari.

kiraretsu War is a business where people wound and wounded.

Na—so. The negative of the imperative mood is in the old classical Japanese formed from the adverbial form by prefixing na and adding so.

Examples:-

Na vuki so.*

Na yaki so.

Do not go.

Do not burn.

^{*} For which the modern language would say yuku nakare.

"Kefu nami na tachi so" to Everybody prayed—may the hito-bito inoru. waves not arise to-day!

Ware wo hito na togame so. Let not people blame me.

The last two examples show that the imperative is by no means confined to the second person.

Yo is in the second and third conjugations added to the adverbial form, and in the irregular verb suru, to the negative base, as the sign of the Imperative Mood. Except by ignorant writers of the present day, yo is not used to form the Imperative in the First Conjugation, but it may be placed after it by way of giving additional emphasis, as in the example Tore yo kashi, "Do take it, I pray you." This is however, a very exceptional use of yo. A yo of this kind may occur even after a negative imperative, as wasuruna yo, "be, sure not to forget."

Examples of yo:—

Mi yo. Tabe yo. Look!

II. UNINFLECTED TENIWOHA ADDED TO CONCLUSIVE FORM.

Rashi is connected with the adjectival termination rashiki, which it resembles in meaning. It is, however, indeclinable, and has always the force of the conclusive, and never of the attributive form. It has the same meaning as sôna of the spoken language, as in the phrase ame ga furi sôna, "it is likely to rain," which would be in the written language ame furu rashi.

There can be little doubt that *rashi* is really added to the attributive form, and that the final *ru* which distinguishes this form in verbs of the second conjugation has been dropped for reasons of euphony. The final syllable of the perfect forms in *ri* is also dropped before *rashi*.

Example of rashi:-

Haru sugite
Natsu kitaru rashi;
Shirotahe no
Koromo hoshitari,
Amenokagu yama.

Spring seems to have passed away, and summer to have come, for the white garments are spread out to dry on Mt. Amenokagu.

To corresponds to the English conjunction "that,"* and is the sign of quotation, or of indirect narration. It may be placed not only after the conclusive forms of verbs and adjectives, but after any word which is capable of standing at the end of a sentence.

As has been explained above (p. 129) there is often an ellipsis after to of one of the five verbs miru, "to see"; kiku, "to hear"; omofu, "to think"; suru, "to do"; and ifu, "to say," either in the substantive form or in the adverbial form with te added. This is often the key to a difficult construction.

In the modern language, as for instance in newspapers, the following construction is not uncommon. First we have some such phrase as *Aru kisha ihaku*, "A certain writer observes," or *Hisokani kikeri*, "I have heard privately." Then follows the quotation, after which is the particle to, marking the end of it. *Iheri* or *kikeri* must of course be added to complete the sense, and the omission of these words is condemned by Motowori as a slavish imitation of a Chinese construction. In the modern language, however, to is continually used in this way by the best writers.

^{*} There can be little doubt that, like its English equivalent, to was originally a demonstrative, and that it is identical with the so of sore, "that." It has still this meaning in the compound to kaku, "in that way or in this," and in the phrase to mare kaku mare, "be it in that way or in this." In many other cases to is best construed as equivalent to "this" or "thus."

Examples of to:—

Rashi ha sôna to ifu kokoro nari to iheri.

Kreaki nobin to suru ni.

Yukan to omofu.

Hidetsugu kô ni tsukahe tatematsuran to (omofu) ni ha arasu.

Takara ohoki ha mi wo mamoru ni gai ari to (ifu) ha kakaru koto wo mafusu.

Hito-guchi wo fusagan to

(omohite).

exclamation. Examples of ya:—

Ari ya nashi ya?

Ito hadzukashiki waza narazu 1'a?

Ureshi va!

Omohi no gotoku mo notamafu ya!

Jitsu ni shikaru ya ina ya wo shirasu.

Kore wo miru ya ina ya, suguni kore wo yakushite—

He has said that the meaning of rashi is sôna.

The fiery element in its efforts to expand.

I am thinking of going.

It is not that I wish to enter Hidetsugu's service.

The saying that great riches are injurious in respect of self-protection was meant of occurrences like this.

Thinking that he would stop people's mouths.

Va. Va has the same variety of meanings after inflected words as it has after uninflected. [See p. 125.] It has sometimes an interrogative force and is at others a mere

Is there or is there not?

Is it not a very shameful thing?

How glad I am!

Your speech is even as my thought!

We did not know whether it was really so or not.

As soon as we saw it, we at once having translated it-

The last example contains a very common idiomatic use Miru ya ina ya literally means "while it is doubtful whether one sees it or not," i.e., "as soon as one sees it."

Kashi is a word which adds emphasis to what precedes. It is often used at the end of prayers to the Deity, where it means much the same as our "Amen." Kashi is doubtless nothing more than the conclusive form of kaku, "thus," and means literally "thus it is." It really stands by itself, and forms no part of the sentence.

Examples:—

Kokoni kuruma yori ori ha- We here got down from the berinu kashi. carriage.

It is difficult to give the force of *kashi* in this sentence, "Thank God" is perhaps a little near it.

Mo, yo, and na after the conclusive form are mere interjections.

All these particles, except *rashi*, are found after both adjectives and verbs in the conclusive form.

III. UNINFLECTED TENIWOHA ADDED TO ATTRIBUTIVE OR SUBSTANTIVE FORM.

As a noun, this form of the verb may be followed by any of the particles mentioned in the previous chapter.

Wo has ordinarily its usual force after this form of verbs and adjectives as the sign of the accusative case. It has, however, sometimes the same meaning as mono wo, i.e., "although," or "whilst." [See p. 115.] For this last wo, modern writers and the colloquial dialect have ga.

Ni is often found with the attributive form of the past suffix shi in the sense of "as" or "since." Kaze fukishi ni, "since the wind was blowing."

Kara, with verbs, means "after," as—

Oshimu kara kohishiki mono Whereas it is after we regret things that they are dear to us.

Kaze no fukishi kara. After the wind blew.

Ka. The interrogative particle ka is suffixed to this form; as has been seen above, ya is added to the conclusive form.

Na added to the attributive form of the verb gives one form of the negative imperative of the written language and the sole form used in the spoken language, as yuku na, "do not go"; taburu na, "do not eat"; miru na, "do not look."

The *ru* final is, in one or two exceptional cases, dropped before this *na*, as *wasuru na*, "do not forget"; *ku na*, "do not come." The regular forms are also found.

The verb *aru*, "to be," has a negative imperative, or rather a substitute for one, formed by prefixing the negative adverb *naku*, "not," to the positive imperative *are*, thus giving the form *nakare*.

Aku, keku. In the old language there is a form which ends in aku in the case of verbs, and in keku in the case of adjectives. The difference in these endings is only apparent. They are identical in meaning, and may both be obtained by the following rule:—

RULE.—Add aku to attributive form, eliding the final u of verbs, and contracting the final i of adjectives with the a of aku into e. [See above, p. 24.] Thus, from miru, "to see," is formed miraku; from kohishiki, "dear," kohishikeku.

The termination aku, whose existence is here assumed, is not found in any other connexion, and its derivation is by no means obvious. The a may perhaps be the a of aru, "to be," and ku is possibly the same as the ko of koto. Samukeku would therefore be samuki-aru-koto; miraku, miru-aru-koto. At any rate this derivation corresponds well with the meaning, for this form is always a noun, and not an adverb or adjective, as the final ku might lead one to imagine. No such form exists as samukeki.

In a few verbs this form is in use even in the modern language, as *Kôshi no ihaku*, "the saying of Confucius"; negahaku ha, "that which I beg for."

Examples:-

Shi ga haha wo toraku wo shirazu.

Mimaku no hoshisa.

They know not of the capture of their own mother.

The wish to see.

In the last sentence aku is added to the attributive form mu of the future particle.

Nagekaku wo todome kane-

- te— Vokeku wo mireba.

Nuru vo ochizu

Ime ni ha miredo Utsutsu ni shi Tada ni araneba Kohishikeku Chihe ni tsumorinu.

Koma no oshikeku mo nashi.

Not being able to restrain my lamentation—

As I see the goodness.

At night when asleep without fail

In my dreams I see thee, But as in my waking hours This is not truly so,

My longing

Is heaped up a thousand-fold. I do not spare my horse.

Ahoshiki, the termination of desiderative adjectives in the old language, is contracted for akuhoshiki. It is added to the future suffix mu. Thus, mimahoshiki, "wishing to see," is mi-mu-aku-hoshiki; yukamahoshiki, "wishing to go," is yuka-mu-aku-hoshiki. These adjectives belong to the second conjugation.

Example:-

Ko wo oshiyuru hito ha kaku koso aramahoshikere.

It is of this kind alone that it is desirable that teachers of youth should be.

IV. UNINFLECTED TENIWOHA ADDED TO NEGATIVE BASE.

Ba with the negative base forms what may be called a future conditional tense. Thus yukaba means "if he shall go," "if he should go," or "were he to go." Ba is probably a contraction for n, the future suffix, and ha, which has in this

combination substantially the same meaning as described above, p. 120. The fact that the older language has ha instead of ba after the negative suffix su and after adjectives confirms this derivation, as the future suffix is not found along with either of these forms. Later writers, however, following a false analogy, use ba for ha in these cases.

After adjectives *m* is sometimes inserted for the sake of euphony, as *yokumba* for *yokuba*, "if it should be good."

In the *Manyôshiu* forms like *yokaba* are found. The commentators say that *aba* is here a contraction for *araba*. *Yokaba* would therefore be for *yoku-araba*.

Ba has often an optative force, which is sometimes brought out more forcibly by adding the interjection ya, as in the sentence hito ni misebaya, "Oh! that I might show it to some one."

Examples of ba:—

Tsuki ide ba.

Kore wo shirazu ba.

Riôgoku ni sebaya to nozomu.

Uguhisu no tani kara idzuru kohe naku ba.

Saraba (for sa-araba).

If the moon should come forth.

If he should not know this.

He wished to make it his own dominion.

Were it not for the note of the uguisu coming forth from the valley.

Should that be so.

De is a negative particle. Its grammar is that of a verb in the adverbial form, It is equivalent to, and is perhaps a contraction for, zu-te. Another derivation makes it a contraction for ni-te, ni being here the old adverbial form of the negative suffix nu.

Example of de:—

Fukaki kokoro wo shirade ahigatashi. It is impossible to meet him without knowing the depth of his heart.

fi is also a negative particle. Its grammar is that of a verb in the adverbial, conclusive, or attributive form. It is the negative corresponding to the future particle n or mu. fi is the equivalent of mai of the spoken language, and of bekarazu of the later written language.

Examples:-

Makeji kokoro.

Isshô no haji kore ni suguru ha araji.

Mukahe-ideji to oboshite.

A spirit that will not be vanquished.

It is improbable that any disgraceful act of his whole life will surpass this.

Thinking he would not go out to meet him.

Kon ya koji ya? Will he come or will he not?

Nan with the negative base must be distinguished from nan with the adverbial form. The latter is the future of nuru. Nan with the negative base is probably contracted for n of the future followed by nan described in the chapter on suffixes added to nouns. The form thus obtained has an optative signification. It is chiefly confined to poetry.

Examples:-

Kimi ga kokoro ware ni tokenan.

Kami ni tamuke suru nusa no ohi-kaze yamazu fukanan.

Would that your heart were melted unto me!

May the favouring breeze of (*i.e.* granted by reason of) the fillets offered to the god blow without ceasing!

De, ji, and nan do not occur after adjectives.

V. UNINFLECTED TENIWOHA ADDED TO PERFECT.

Ba with the Perfect is the same separative particle ha (with the nigori) already described at p. 120. Yukeba, for instance, will therefore mean "in the case that he has gone," "in respect to his having gone," and ba in these forms may usually be

rendered by one of the conjunctions "since," "when," "whereas," "because."

Ya after this ba has its ordinary dubitative force, and not an optative, as when it follows ba suffixed to the negative base. Thus mirebaya means "since he has seen, if indeed he has seen," while mibaya means "Oh! that he might see." Mireba ka would mean "is it because he has seen," or "perhaps because he has seen."

Examples of ba:-

Haru tateba, kiyuru kohori.

Hi wo tomoshite mireba, roku-jiu bakari no hôshi nari.

Sareba or shikareba (for sa areba or shika areba).

Kono hi kureshikaba (shika, perfect of past participle shi).

The ice that melts now that the spring has come.

When he kindled a light and looked, it was a priest of about sixty years of age.

Since that is so, or that being so.

When this sun had set.

Do is the same particle to (with the nigori) already described under the head of particles suffixed to the conclusive form. With the perfect it may be translated "though," "although," "notwithstanding." To ihedo, literally "though it be said that," "though one say that," is often found where the meaning is simply "although."

Observe that the phrase yuku to mo, "though he should go," forms a Future Concessive corresponding to the Future conditional yukaba, "if he should go," while yukedo is the Perfect Concessive corresponding to the Perfect Conditional yukeba.

Do is very commonly followed by mo, "even," as yukedomo, "even though he went."

Yobedomo, samezu.

Tenki ha yoroshiku safurahedomo, sashitsukahe kore ari, mairi-gataku safurafu.

Konnichi no on ide wo machi safurahedomo.

Kanji wo mochiyuru ha hanahada futsugô naredomo. Even though they called her, she did not awake.

Although the weather is good, I am unable to come, having an engagement.

Although I expected you to come to-day.

Although the use of Chinese characters is very improper.

Ya, the interrogative particle, is sometimes found after *me*, the perfect form of the future particle *mu*, as in *arame ya*, "will there be," or "will there have been."

Ba and do may be added to the perfect forms of either verbs or adjectives.

CHAPTER VII.

INFLECTED TENIWOHA.

Inflected teniwoha are suffixed to verbs and adjectives only. In the following list the same classification has been adopted as in the case of the uninflected teniwoha, i.e., according to the part of the verb to which they are suffixed. Only a few of these suffixes are added directly to adjectives. As in the case of uninflected teniwoha, the verb aru usually intervenes.

I. INFLECTED TENIWOHA ADDED TO ADVERBIAL FORM.

Tsuru (te, tsu, tsuru, te, tsure) has the same meaning as the Chinese 音 and the Japanese hatsuru, i.e., "to finish"; thus mitsuru, kikitsuru, mean "to finish seeing." "to finish hearing." Tsuru is much the same as the te shimafu of the spoken language. It is not really a sign of the past tense, or it would hardly be found combined with the past suffix shi, but it is often difficult to render it otherwise in English.

Te followed by the combination of particles shi ga or shi ga na forms an optative. Ex.: Ikade kono Kaguvahime wo eteshigana, miteshigana. "Oh! that I might obtain this Kaguyahime! Oh! that I might see her!"

Te, with n, the future particle, and ya, the interrogative. expresses a request; as in the following examples:—

Yo fukete, osoroshikereba, As the night has become okurite tamahi ten ya.

Chiunagon no ko wo esaseten 1'a ?

late, and I am afraid, will you please escort me.

Will you be after causing me to obtain the Chiunagon's daughter?

In the later form of the language, the root te is the only form in use. Here it has lost the meaning te shimafu which it had in the old language, and merely indicates that the action of the verb to which it is joined is regarded as prior or preparatory to that of the principal verb of the sentence; in other words, it forms a past participle.

Examples of tsuru:

Uguhisu no nakitsuru hana.

Sake kurahitsureba, inan to ifu.

Hana sakite zo hito mi ni kuru.

Okina no mafusan koto kikitamahi ten ya.

Ikusa mite, ya wo hagu.

Kakushite yo. Haru sugite, natsu kitaru. The flowers where the uguisu has just been singing.

When they had finished drinking the wine, they said they would go away.

It is after the flowers have opened, that people come to see them.

You will kindly hear to the end what the old man is about to say to you.

To whet one's arrows after one sees the battle.

Be after hiding it.

Spring having passed, summer comes.

Taru (tari, tari, taru, tara, tare) is te, the adverbial form of tsuru, followed by the verb aru, "to be." It has the same meaning as the te aru or te iru of the spoken language, and should be distinguished from the colloquial ta, which (though the same word as taru) is used simply as a past tense. The force of taru will be understood from the following examples: Nururu, for instance, means "to get wet"; nuretaru, "to be having got wet," i.e., "to be wet"; nuru means "to lie down"; netaru, "to be having lain down." The nureta and neta of the spoken language mean "got wet," "lay down."

Examples:-

Hige kami kotogotoku shiroku nari-tari.

Kimono no shimeri-taru wo nugite.

Kami-kazu wo habuki-taru ha hone-ori wo hoshimu ni arazu. His beard and hair have all become white.

Having taken off his wet clothes.

The having diminished the number of leaves was not because labour was grudged.

Nuru (ni, nu, nuru, na, nure) is the verb inuru, "to go away," the initial i having been lost after the i or e final of the adverbial form of the preceding verb. Nuru and tsuru differ little in meaning, but they are not found combined with the same verbs, nuru being usually found with intransitive, tsuru with transitive verbs. This rule is, however, subject to numerous exceptions. Nuru may often be conveniently rendered by the adverb "away," as yuki-nuru, "to go away," shinobi-nuru, "to steal away," yake-nuru, "to burn away." The German hin is a still closer equivalent.

Nan after the adverbial form of verbs is the future of this suffix

Motowori is of opinion that ni in such phrases as nari ni keri, kihe ni seba, etc., is ni the adverbial form of nuru and not ni the preposition.

Like te, ni with shi ga or shi ga na has the force of an optative.

Examples of nuru:—

Nonoshiru uchi ni yo fukenu.

Kokoni usenishikaba. Fune ni norinan to su. Whilst we were gossiping, the night grew late.

Inasmuch as she died here.

We made to go away on board.

Keru (keri, keri, keru, kera, kere) is the perfect of kuru, "to come," as in the example tsukahi no kereba, tanoshimi to

(omohite) matsu, "I waited, thinking of the joy when the messenger should have come." As a suffix, however, it is employed in a looser and more general signification, and is sometimes little more than a substitute for the perfect ending of the principal verb. Where its original force is more distinct it may be rendered "at length," "it came to pass that."

The form geru is sometimes met with in old writers.

The spoken equivalent of keru is te kita.

Examples of keru:—

Hana ha saki keri.

The flowers have at length opened.

Haru ha ki ni keri. Nige-use ni keri. Spring has at length arrived. They at length ran away.

The *ni keri* of the last two examples is often written *ngeri* in the *naka mukashi* period.

Shi (—, ki, shi, ke, shika) is the sign of the past tense. The root of the verb with shi added is like the Greek aorist, simply a past tense, and nothing more. This is really the only past tense in the Japanese language, at least in its classical form. Past time may, however, be implied by the use of other suffixes, and when tsuru, nuru, taru or keru is added to a verb, a past tense will usually, though not invariably, be the proper translation.

The following example illustrates the distinction between tsuru, nuru, and shi. Fuji nami ha saki te chiri ni ki, "the westeria waves (poetical for flowers) having first (te) blossomed, became (kt) dispersed away (ni)."

Ignorant writers of the present day often use *shi* for the conclusive as well as for the attributive form.

The semi-Chinese style prefers to indicate past time by separate words such as *katsute* "previously," *sudeni* "already," &c.

Examples of shi:-

Kiô ni te umareshi womina.

Kokoni usenishikaba.

Muma wa kishi (or koshi) wichi wasurenu mono nari.

Korosan to shiki.

A woman born in Kiô. Inasmuch as she died here. The horse is an animal which

does not forget the road which it has come.

They made to kill us.

Taki is inflected regularly as an adjective of the first

conjugation.

It is the same word with the adverb *ito* (before adjectives) or *itaku* (before verbs) "very," "exceedingly," and in the old language when added to verbs it produced adjectives resembling English adjectives in *ly*, *ful*, etc., as *medetaki*, "lovely," from *medzuru*, "to love"; *kohi-taki*, "much longed for," from *kofu*, "to love," "to long for." In the modern language *taki* forms desiderative adjectives, and may be added to all verbs, as *yukitaki*, "desirous to go," *uritaki*, "desirous to sell." It has replaced the *ahoshiki* of the old language.

Examples of taki:—

Go mengo nasaretaki mune.

Go shôchi kore aritaku zonjisaburafu. The information that you desire an interview.

I think it desirable that you should understand.

II. INFLECTED TENIWOHA ADDED TO CONCLUSIVE FORM.*

Naru (nari, nari, naru, nara, nare), "to be," is sometimes found annexed to the conclusive form of the verb, as in the

^{*} It has been thought convenient to follow the practice of the Japanese grammarians and to place the suffixes naru, meru, ran, beki, and majiki under the head of Teniwoha suffixed to the Conclusive Form. At the same time there can be no doubt that these particles are really suffixed to the attributive form, and that what in verbs of the second conjugation appears to be the conclusive form is only the attributive form denuded of the final syllable ru, which has disappeared owing to phonetic causes.

phrase Yama ni mushi no kohe su nari, "There is a chirping of insects on the hill."

Meru (meri, meri, meru, mera, mere) expresses a slight shade of uncertainty, such as is indicated in English by the use of such adverbs as "seemingly," "probably," "apparently."

The Kotoba no Chikamichi says that meru is contracted for mihe aru, mihe being the root of miyuru, "to seem."

Aru, whether alone or in composition, loses the final ru before meru.

Examples of meru:

Shiritameredo.

Although they are doubtless aware.

Oroka naranu hito bito ni They are doubtless anything koso amere (for aru mere). but stupid men.

Ran (ran, ran, ran, —, rame) is aran, the future of aru, "to be," the initial a being dropped after the final vowel of the verb, in order to avoid a hiatus. Ran is therefore the same

No question arises on this point in the other conjugations where these two forms are identical.

This will explain a number of apparent irregularities in the forms assumed by the verb before these particles. For instance, we see that seza nari, where nari is apparently attached to the negative base, is really sezaru nari, and in confirmation of this we have the intermediate form sezan nari, in which the n of sezan represents the r of ru which has become assimilated to the following consonant. In the same way miran, where ran seems added to the adverbial form, is a contraction for miru ran, ameru for aru meru, su nari for suru nari.

The modern written language sometimes follows the Yedo colloquial idiom in having the attributive form of verbs of the second conjugation in *eru* or *iru* instead of in *uru*, and we therefore meet with such forms as *sutebeki*, *dekimajiki*, where *beki* and *majiki* are not really added to the adverbial form, as might appear at first sight, but to the colloquial attributive in *eru* or *iru*, the final *ru* having been lost.

For a similar reason mai (for majiki), the sign of the negative future in the spoken language, is only apparently suffixed to the adverbial form in the second conjugation.

as $de \ ar\hat{o}$ of the spoken language, or ni te aran of the written language. Ran expresses a slight shade of doubt.

Examples of ran:-

Hôrai to ifuran yama.

Hagi ga kana chiruran.

The mountain called, if I mistake not, Hôrai.

The hagi flowers will doubtless become scattered.

Beki (beku, beshi, beki, beku, bekere) is a regularly inflected adjective of the first conjugation. It is used in many different shades of meaning, such as to express probability, possibility, moral obligation, necessity, futurity, &c., and may be variously rendered according to circumstances by "probably," "may," "ought," "must," "should," "will," &c. The last meaning is very common in the later official and epistolary style, where beki has almost superseded the ordinary future in n. Beshi and bekarazu (beku-arazu) are often used as nearly equivalent to the ordinary imperative.

In the Monogatari beii is frequently found for beku.

Examples of beki:-

^tôshiu e ranniu subeshi to geji shi-tamafu.

Idzure yowakaran tokoro mukafu beshi.

Teki ha sadamete taigun naru beshi,

Tatakafu beki ka; waboku kofu beki ka?

Kono uta mo kaku no gotoku naru beshi.

Sono birei naru koto ifubeii mo arazu.

He ordered him (saying)
"Make an incursion into
Jôshiu."

He was to confront whatever place might be weak.

Decidedly the enemy are *sure* to be in great force.

Should we fight or beg for peace?

The same is *probably* the case with this poetry also.

It was impossible to describe its beauty.

Bemi and bera are poetical forms. They are abstract nouns

obtained by adding to the root be the terminations mi and ra. [See above pp. 42, 43.]

Example:-

naru.

Chi-tose-dochi to zo omofubera There is a thinkability that thev are thousand-year comrades, i.e., one may well suppose that they have been comrades for a thousand years.

Majiki (majiku, maji, majiki, majiku, majikere) is a regularly inflected adjective of the second conjugation. Its meaning is the opposite of that of beki. Mai, the negative future of the spoken language, is a contracted form of majiki.

Examples of majiki:-

Kono yo ni ha mata mirumaji.

In this world, at any rate, we are unlikely to see him again.

Tsukafu beki tokoro to tsukafu majiki tokoro to ari.

There are places where it ought to be used, and also places where it ought not.

INFLECTED TENIWOHA ADDED TO ATTRIBUTIVE FORM. III.

There are no inflected teniwoha added to the attributive form of the verb or adjective.

INFLECTED TENIWOHA ADDED TO NEGATIVE BASE.

Nu (zu or ni, zu, nu, zu, ne), "not," is the negative suffix. Ni is obsolete in all but the oldest form of Japanese.

Examples of nu:-

Ihanedo Shirasu

Shirazu omohiki.

Vô sesu-ha.

Though one do not say.

I don't know. He felt ignorant.

If one did not take care.

Zaru (zari, zari, zaru, zara, zare) is for zu-aru. In the later language zaru is preferred to the simple suffix nu, especially in the case of the attributive form.

Zaru, for zo aru, must be distinguished from the above.

Examples of zaru:-

Shirazari keri. Shirazaru hito. He did not learn (or know).
A stranger, or, a man who does not know.

N or mu (n or mu, n or mu, n or mu, —, me) is the future suffix. It may also give the verb the force of a subjunctive or of an optative mood. At other times such adverbs as "probably," "doubtless," &c., are the most convenient way of rendering it.

Examples of n :=

Hototogisu ki-nakan tsuki ni.

Imada minu hito ni mo tsugen.

Krvaki nobin to suru ni.

Ikahodo kammuri uruhashikaran ni mo.

Nikki kakan hito.

Korosan to shiki. Hôrai to ifu yama naran. In the month when the hototogisu will come and sing.

I would tell those also who have not yet seen it.

The fiery element, in its efforts to expand

However elegant the head-dress may be.

Those persons who may write journals.

They made to kill us.

It is probably the mountain called Hôrai.

Nzuru. The future suffix n is sometimes combined with the verb suru, "to do," thus forming a compound future tense. This combination has the meaning of a future tense proper, and not of a subjunctive or optative mood.

Examples of nzuru:-

Kihe usenanzu.

Saru tokoro he mairanzuru koto

Ware ha kore yori kaheri inansu

I will vanish away.

The being about to go to such a place.

I will return from this place.

This combination is not found either in the oldest or in the most modern form of the Japanese language.

The word *makarazu* occurs in the *Tosa Nikki* not as a negative, but as a future. *Makarazu* is here put for *makaranzu*, "I will come." This form is preserved in several of the local dialects.

Mashi (—, mashi, mashi, mase, mashika). Mashi is a kindred particle to n and beki, but like the English phrases "would have," "ought to have," is only used where the action of the verb might have taken place, but did not. It is most commonly found after conditional clauses, where it implies that the condition is unfulfilled.

Mashi is chiefly confined to poetry.

Examples of mashi:—

Chikakaraba Kaheri ni dani mo Uchi-yukite Imoga tamakura Sashi-kahete

Netemo komashi wo.

Ahi mizu ba Kohishiki koto mo Nakaramashi. If thou wert near,
Even it were only to return,
I would go to thee,
And having slept,
Exchanging with thee arm
pillows,
I would come.

If we had never met, Neither would there have been love. Miru hito mo
Naki yama-zato no
Sakura-bana
Hoka no chiruran
Nochi zo sakamashi.

Uguhisu no tani yori idzuru kohe naku ba, haru kuru koto ha tare ka shiramashi? The cherry-flowers of the mountain hamlets, where there are none to see them, ought to flower after the others shall have become scattered.

Were it not for the note of the uguisu from the valley, who would know of the arrival of spring?

V. INFLECTED TENIWOHA ADDED TO PERFECT.

Ru (ri, ri, ru, ra, re). The meaning and derivation of the perfect form in ru have been already explained at page 88. This form is peculiar to verbs of the first conjugation and the irregular verb suru, the perfect of which is seru.

Examples of perfect form in ru:-

Kono koto ha onore Mikuni no Kotodama ni tsubara ni iheri,

Nochi no yo no hito no kakeru
mono miru ni.

This subject I have myself fully discussed in the Mikuni no Kotodama.

In reading the writings of men of a later age.

TABLE OF TENIWOHA SUFFIXED TO INFLECTED WORDS.

CHAPTER VIII.

HUMBLE AND HONORIFIC VERBS, AUXILIARY VERBS, VERBS
USED AS ADVERBS AND CONJUNCTIONS.

The absence in the Japanese verb of any grammatical distinction of person has been already remarked. This want is partly supplied by the extensive use of humble and honorific words and particles, the former being chiefly characteristic of the first person, and the latter of the second. A curious exception is the case of the Mikado, who in books is made to use the honorifics in speaking of himself.

Humility and respect are indicated in Japanese in the following ways:—

- I. By prefixing to nouns on, go, ki, son, hei, &c.; or to verbs the particles o or on.
- II. By substituting for the simple verbs the derivative causative or passive verbs.
- III. By the use of humble and honorific synonyms instead of the ordinary nouns or verbs.
 - IV. By means of auxiliary verbs.

Tegami (letter)

The humble and honorific prefixes, and the use of causative and passive verbs as honorifics, have been noticed above. [See pp. 46, 99, 100.] The following are examples of humble and honorific synonyms:—

NOUNS

hôkan

	1.001.01	
NEUTRAL.	HUMBLE.	HONORIFIC.
Ko (child)	segare	go shisoku
Musume (daughter)	chôia	chitcu in

VERBS.

$NEUTRAL_{ullet}$	HUMBLE.	HONORIFIC.
Miru (to see)	Haiken suru	Goranjiru or Goran nasaru
Suru (to do)	Tsukamatsuru	Nasaruru
Yuku (to go)	Makaru	Idemasu
Kuru (to come)	Mairu	Idemasu
Ifu (to say)	Mafusu	Ohosuru
Atayuru (to give)	Aguru	Kudasaru
"	Tatematsuru	Tamafu
Taburu (to eat)		Kikoshimesu
Okuru (to send)	Mairasuru	

As will be seen from the examples quoted below, the verbs used as humble and honorific substitutes for ordinary verbs have a tendency to lose their original specific meaning, and are in many cases used as mere indications of humility or respect. In some instances a still further change takes place, the distinction between respect and humility is lost, and the auxiliary ceases to be anything more than a characteristic of a polite style. A familiar example of this is the termination *masu* of the spoken language.

I. Auxiliary verbs used primarily with verbs in the first

person to express humility.

Haberu or hamberu originally meant "to be beside," "to be in attendance on," but it has acquired the same force as the modern colloquial masu or gozarimasu. The old language uses haberu chiefly with verbs in the first or third person as a more respectful word than aru, "to be," or woru, "to abide." It is obsolete in the modern language.

Examples of haberu:

Ikade ka yo ni haberan?

How shall I remain in this world?

Yo ha omohi no hoka naru mono to omohi haberu.

It is my humble opinion that this world is a thing which is beyond our expectations. Me mo mihe haberanu ni.

My eyes, too, being unable to see.

Sa ha haberanu ka?

Is it not so?

Samurafu, saburafu, or safurafu is a verb of the first conjugation. Like haberu, it originally meant "to be in attendance upon," and in this sense it often occurs in the older literature. The word samurahi, "a Daimio's retainer," "a man of the two-sworded class," means, therefore, properly "an attendant." Safurafu (pronounced $s\delta r\delta$) has by degrees become the written equivalent of the colloquial masu or gozarimasu, and is now used as a polite auxiliary with all three persons, and even where the subject of the verb is not a living being at all. In the modern epistolary style, almost every verb has safurafu $(s\delta r\delta)$ annexed to it.

Examples of safurafu:—

Kusushi Atsushige go Hô-ô no onmahe ni samurahite.

Sadamegataku zonji safurafu.

Shokan wo mochite mafushiire-safurafu.

Deki shidai sashi-shinzu-beku safurafu.

—--to yomeru koka mo safuraheba.

Onmi ha ika naru hito ni te safurafu?

The physician Atsushige being in waiting before the retired Emperor.

I think it is impossible to decide.

I address you by a letter.

I will send it to you as soon as it is finished.

As there is an old stanza composed saying that—

What manner of man are you?

Makaru means properly "to go down," "to retire from the presence of a superior," or "to go from an honourable place to one which is less honourable." Later it became used more generally as a humble word instead of yuku, "to go." In the Japanese of the present day makaru does not stand by itself,

HUMBLE AND HONORIFIC VERBS.

but is prefixed in the adverbial form to verbs signifying motion, such as yuku, idzuru, kosu, &c., as a mere auxiliary to express humility. It is also found before aru, "to be," and woru, "to abide."

Makaru occurs very frequently in the notes of evidence taken in courts of justice.

Examples of makaru:

Tama no eda tori ni nan makaru to ihasete (Tsukushi he) kudari tamafu.

Saying that he was going down to fetch the jewel branch, he went down (to Tsukushi).

Going from the capital to the provinces is always spoken of in Japan as "going down." This example is from one of the old classics. The following examples show the modern use of makaru:--

Kifu he makari koshi safurafu setsu.

When he visited your honourable city.

Kokoni makari ari safurafu tokoro.

Whilst I was here.

Mafusu (pron. môsu) was originally used, chiefly in the first person, as a very humble word for ifu, "to say." In the later language it is still a polite word for *ifu* when it stands alone or precedes another verb, but it is also employed after verbs in the adverbial form as a mere auxiliary to indicate humility, and without any trace of its original meaning.

Examples of mafusu:

ANCIENT LANGUAGE.

Genji no kimi ni mafusube- Something which ought to ki koto.

be respectfully represented to Prince Genji.

Kono yoshi mafushi tamahe.

Be so good as to represent this (to some high personage).

MODERN LANGUAGE.

hiki-ire-mafushi-safurafu.

Vakushô to oboshiku mihe- It looked like a public office. mafushi safurafu.

Hiki-bune idete minato he Tug-boats having come out, towed us into the harbour.

Vu zvo tsukahi-mafusu koto.

The use of hot baths.

Kikoyuru, like mafusu, is properly a humble word for "to say," "to tell," but it is often used as a mere auxiliary expressing humility without any specific meaning. The compounds kohi-kikoyuru, omohi-kikoyuru for instance, are only polite expressions instead of the simple verbs kofu, "to love," omofu, "to think." This word is obsolete in the modern language.

Tatematsuru originally meant "to give as a present," as in the sentence Masatsura sake yoki mono tatematsureri, "Masatsura brought a present of sake of excellent quality." As an auxiliary it is a very humble word, and is much used in memorials, addresses, and other writings composed in a formal style.

Examples of tatematsuru:

Ippitsu keijô tatematsuri safu- I beg to address you one stroke of the pen. rafu.

Negahi age tatematsuri safu-I most humbly request you. rafu.

Aguru, "to raise," "to offer up," is also joined to the roots of verbs to mark humility.

Example:-

Sudeni mafushi-age safurafu As I have already had the vôni. honour to inform you.

Mairasuru means "to send as a present." It is used generally as a humble auxiliary both in the old language and occasionally in the modern epistolary style, especially in letters written by women.

Examples of mairasuru:

Go henji wo mafushi-age mairase-safurafu beshi.

On yorokobi mafushi-age mairase-safurafu. I shall reply to you.

I beg to offer you my humble congratulations.

II. Auxiliary verbs used as honorifics with verbs in the second person, or with verbs in the third person when the actions of some exalted personage are spoken of.

Tamafu is a lengthened form of the old verb tabu, "to give," and was originally used as a honorific substitute for that verb. Even at present it has often this force, but it is more commonly a mere honorific in which the meaning "give" can no longer be traced.

Examples of tamafu:—

Wasure-tamafuna.

Sassoku ni kiki-sumi tamahiki.

Tsuki wo mite imijiku nakitamafu.

Oshihe - mairase-sase-tamahikeri. Please do not forget.

At once granted his request.

Seeing the moon, she wept exceedingly.

He caused him to teach.

Masu (1st conj.) is used as a honorific in the old language, where it is found exclusively in the second or third person. It is much more restricted in its use than tamafu, being only used along with certain verbs. Masu originally meant "to sit," "to dwell." The modern colloquial auxiliary masu is the same word, although its conjugation is different, and it is used indiscriminately with all three persons.

Examples of masu:-

Hanamuke shi ni idemaseri.

He came to give a parting present.

Kakuri-mashi-ki.

He became hidden, i.e., he died

Ko ha Watarahi ni masu kami nari

This is the god who dwells in Watarai.

Asobasu, asobasaru, and asobasaruru, from asobu, "to sport," are used as honorifics in the same way as tamafu.

Examples:-

On sorohi asobashi, gokigen That you all together have voku on toshi kasane-

begun a new year in good health....

Go konrei shiubi yoku on totonohi asobasare medetaku zonji tatematsuri safurafu.

I beg to congratulate you on the marriage which you have celebrated so auspiciously in all respects.

In the older language, if a honorific particle is placed before a verb the honorific terminations or auxiliaries are omitted, and vice versa no honorific is prefixed if the verb has a honorific termination or auxiliary. This rule is not observed in the later language.

III. Other auxiliary verbs.

Aru, naru. Aru (村) means "to be," in the sense of "to exist." It is not the mere copula of a proposition like ग्याग (ग्री). Thus, although the two propositions

> Kono muma ha shirokari. Kono muma ha shiroki nari.

are practically identical, the real meaning of the former is "As to this horse, the quality of whiteness exists," while the latter is "This horse is white," nari being nothing more than a copula.

Aru is chiefly used, as in the above example, as an auxiliary joined to adjectives. Its use with verbs to form a perfect tense, and its combinations with some of the commoner teniwoha have been already noticed.

Naru, which is conjugated like aru, is contracted for ni aru.

Here the ni is sometimes the locative particle "in," and sometimes the root of an obsolete verb nu, "to be." Naru as an attributive is abbreviated in the spoken language into na, a form which is occasionally used by modern writers.

Nari is often used after the attributive forms of verbs and adjectives to form a substitute for the conclusive form. It should be distinguished from naru, "to become," which follows the adverbial form of adjectives, and which is conjugated as a regular verb of the first conjugation.

Examples of aru and naru:

Chi aru mo, oroka naru mo.

Both those who have understanding and those who are foolish.

Kore ha Hôrai no yama nari. Kaku nari to shirubeku nan. Midzukara gi wo tokashimuru nari.

This is the mountain Hôrai. You must know that this is so. It makes the meaning explained of itself.

Naze nareba—nani nani to nareba nari.

Why is it so?——it is because it is so and so.

Suru, "to do." The simple verb may be replaced by the adverbial form followed by suru. Sometimes, however, there is a difference of meaning. Thus yorokobi-te means "rejoicing"; yorokobi shite, "making gala."

Uru, "to get," "to be able," is prefixed in the adverbial

form c to negative verbs, as in the examples—

E ihazu. E nomazu. He is unable to say. He is unable to drink.

E omohi hanareji.

He will be unable to cease to think of her.

A noun may intervene, as in the example:—

E taimen tamawaranu. I cannot accept an interview

Kanuru, "to be unable," is annexed to verbs in the adverbial form.

Example:—

Yuki-kane safurafu.

I am unable to go.

Afu, "to meet." In many cases, this verb when prefixed in the adverbial form to other verbs has more or less of its original meaning, as *ahi-noru*, "to ride together"; *ahi-miru*, "to see one another"; *ahi-boruru*, "to love one another"; but in the later language it is often used without much meaning, as natsu ni ahi-nari safurafu toki, "When it became summer."

VERBS AS ADVERBS OR CONJUNCTIONS.

Many words which must be translated in English by adverbs or conjunctions are, in Japanese, verbs or adjectives (kotoba). Indeed, as shown in Chap. IV., every verb and adjective has a form in which it is an adverb.

Examples of verbs as adverbs:-

Hatashi-te. "Ultimately," "eventually."

Seme-te. "At least."

Kaheri-te. "On the contrary." Mashi-te. "Much more so."

Amari "Too much."

Kahesu-gahesu. "Again and again."
Nokora-zu. "Without exception."

Examples of verbs as conjunctions:—

Sô-shite (lit. "having done so") "and."
Shikareba (lit. "since it is so") "therefore."

Ovobi (adv. form of oyobu, "to reach to") "and."

Narabi ni (lit. "in a line with ") " and."

Tadashi (adv. form of tadasu, "to correct") "but."

Aruhiha (properly aru ha) "in some cases," "or."

CHAPTER IX.

SYNTAX.

ORDER OF WORDS IN A SENTENCE.

- 1. Qualifying words or phrases precede the words which they qualify. Thus:—
- (a) The adjective (verb or adjective in attributive form) precedes the noun which it qualifies, as *yoki hito*, "a good man"; *kuru hito*, "the man who comes."
- (b) The adverb precedes the word which it qualifies, as ito hayaku, "very fast"; hayaku kuru, "to come quickly."
- (c) The noun followed by the genitive participle no or ga precedes the noun to which it is joined, as hito no chikara, "a man's strength."
- 2. The nominative case stands at the beginning of a sentence. Tsuki ha kagiri naku medetaki mono nari. "The moon is an immeasurably beautiful object." To this rule there are numerous exceptions. In comparisons, the object with which the subject of the sentence is compared usually, though not always, precedes it, as in the sentence Kono yama yori are ha takashi, "That mountain is higher than this."
- 3. The verb (verb or adjective in conclusive form) is placed at the end of the sentence, as in the last example.

The regular order of a sentence is frequently inverted in poetry, the verb appearing in the middle, and the sentence being closed by a noun, a particle, or a verb or adjective in the adverbial or attributive form.

Examples:

Na de fu (for nani to ifu and pronounced najô) kokochi sureba, kaku mono omohi taru sama ni te tsuki wo mi tamafu zo — umashiki yo ni?

Kokoro aran

Hito ni misebaya

Tsunoöka ga

Shiwoyaki keburi.

The later semi-Chinese prose style affords examples of a similar construction.

Negahaku ha shihô no kunshi kôkiu aran koto wo.

Osoraku ha fugaku no soshiri aran koto wo.

Osoraku ha yo no hito no warahi-gusa to naran koto wo.

Because of what feelings do you in this pleasant world gaze upon the moon with the appearance of being so immersed in thought?

I would that I could show to some one who had a heart the smoke from the salt-furnaces of Tsunoöka.

- I pray that gentlemen from all quarters will purchase it.
- I fear I may incur the reproach of ignorance.
- I fear it may become a laughing-stock to the public.
- 4. The case signs are placed after the nouns to which they relate, as *koko made*, "to this place"; ware no, "mine."
- 5. The direct object of the verb precedes it, as *kaha wataru*, "to cross a river." In poetry the object is sometimes placed after the verb.
- 6. A noun governed by a preposition precedes the direct object of the verb, as *fune ni kaha wataru*, "to cross a river in a boat."
- 7. Expressions denoting time precede expressions denoting place, and a general expression precedes one that is more precise. Examples: Itsu made kokoni sumu ka? "Until when do you reside here?" Roku gwatsu nanuka made. "Until the seventh day of the sixth month."

- 8. Conjunctions and interrogative particles are placed after the word or clause to which they belong, as in the examples, *Ika naru hito ka to tofu*, "He inquires what manner of man he is"; *Ikaga subeki to omofu*, "What is to be done? thought he."
 - 9. Dependent clauses precede principal clauses.

Example:-

Uguhisu no

Tani yori idzuru

Kohe naku ba,

Haru kuru koto ha

Tare ka shiramashi?

In poetry this rule is often disregarded.

Examples:—

Yo wo sutsuru

Kokoro ha nawo zo

Nakari-keru-

Uki wo ushi to ha Omohi shiredomo.

Aki hagi wo

Irodoru kaze ha

Fukinu tomo

Kokoro ha kareji

Kusaba naraneba.

Inversions like the following are not unfrequent in the modern semi-Chinese style:—

Hisokani kiku—shimbun jôrei issô gem-mitsu wo kuhafuru no gi ari to.

Kore wo kiku—kôgi ha ses-sei ni shikazu to. Were it not for the note of the *uguisu* from the valley, who would know of the arrival of spring?

To abandon this world Heart as yet There is not— That misery is miserable Though I recognize.

What though the wind blow that paints the autumn hagi — my heart will not wither, for it is not a herbleaf.

We have privately heard that it is under consideration to add a degree of stringency to the Press Laws.

We are told that a clever falsehood is inferior to a clumsy truth. In the style imitated from the Chinese, as for instance in official letters, a number of words of frequent occurrence are usually written in the Chinese order, although in reading, the Japanese construction is followed. Thus the verbs motsu 以, itasu 致, seshimuru 合, uru 得, yoru 依 (or 因) in the phrase ni yorite, oku 於 in the phrase ni oite, oyobu 及 are written before the nouns which they govern, the passive termination aruru 被 is written before the verb to which it belongs, ari 有 is put before kore when kore is nominative to it, the negative particle zu 不 comes before its verb, and the adjectives kataki 難, gotoki 如, and beki 可 precede the verbs with which they are compounded. Examples will be found in specimens VII., VIII., and IX. at the end of the volume.

PARTICLES AFFECTING THE FORM OF THE VERB OR ADJECTIVE AT THE END OF A SENTENCE (kakari teniwoha).

It has been already pointed out (p. 88) that the principal verb of a sentence, *i.e.*, the verb in the indicative mood, or the adjective when it includes the verb "is," is placed at the end of the sentence, and in the conclusive form. To this rule classical* Japanese recognizes certain well defined exceptions, which are stated below. It is difficult to over-estimate the importance of this part of Japanese grammar. Motowori has devoted a work in seven volumes, the *Tama no O*,† to the elucidation and illustration of this rule and its exceptions,

^{*} The modern language shows a strong tendency to disregard these exceptions and to revert to the simplicity of the general rule. In the present spoken language both rule and exceptions are altogether unknown, and in the modern written language there is so much confusion between the old practice and the new forms to which the language seems tending, that no rule can be laid down. The semi-Chinese style rarely employs constructions where the exceptions required by classical Japanese would be exemplified.

[†] Tama no O, lit. "the string of jewels" (i.e., the connecting principle of words), a high-flown expression for "syntax."

and other grammarians have followed his example. The substance of Motowori's treatise is contained in the following rules, among which I. and II. are much the most important:—

RULE I. When one of the particles zo, nan (not the particle nan suffixed to verbs), or an interrogative (ka, ya, nani, nado, nazo, tare, ikani, ikaga, ikade, idzure, itsu, iku) occurs in a sentence, the verb or adjective which closes it is put in the attributive instead of in the conclusive form.

Examples:-

Kore ya waga motomuru yama naru.

Kore zo tama narubeki.

Yama kakusu
Haru no kasumi zo
Urameshiki.
Kami yo yori
Iku yo ka henishi?
Fukaku omohi
Sometsu to ihi shi
Koto no ha ha
Itsu ka aki-kaze
Fukite chirinuru?

Katachi yori ha kokoro nan masaritaru.

Most Japanese grammarians include *no* in the list of particles which govern the attributive form. The mere occurrence of *no* in a sentence, however, does not affect the final verb or adjective, unless it is actually joined to it. In such cases the verb or adjective is properly a noun, but as shown at p. 107, this construction is frequently substituted for the conclusive form.

This is (if I mistake not) the mountain of which we are in search.

It is this which must be the jewel.

This mist of spring which hides the mountains is hateful.

How many ages have passed since the age of the gods?

When was it that the autumn wind blowing scattered those leaves of speech (*i.e.*, words) in which he told me that his mind was deeply tinged with love?

Her heart was more excellent than her beauty.

Examples:—

Sasagani no Koromo ni kakari Ware wo tanomuru. The spider, clinging to my garment, has turned to me for help.

No is here joined not to koromo, but to tanomuru, so that there is properly no verb in the sentence, sasagani no tanomuru meaning properly "the spider's turning for help," not "the spider turned for help."

Ware wo omofu
Hito wo omohanu
Mukuhi ni ya?—
Waga omofu hito no
Ware wo omohanu.

Is it as a punishment for not loving him who loved me?—

He whom I love loves me not.

RULE II. When the particle *koso* occurs in a sentence, the verb or adjective which closes it is put in the perfect form instead of the conclusive form.

Examples :--

Kore koso tama nare.

Yone koso yokere.

Iro yori mo
Ka koso ahare to
Omohoyure.
Mi no uki wo
Wasure-gusa koso
Kishi ni ofure—
Ube Sumiyoshi to
Ama mo ihi-keri.

It is this, and this only which is the jewel.

It is rice, and nothing but rice, which is good.

I feel touched above all by the fragrance more even than by the colour.

Above all things (koso) the herb of forgetfulness of one's woes grows upon the bank—well have the fishermen given it the name of Sumiyoshi (pleasant to reside in).

Yakezu ba koso, makoto naran to omohi te, hito no ifu koto ni mo makeme. In case it does not burn, and in that case only, I will consider it genuine, and will comply with the man's proposal.

A verb has often to be supplied after koso.

Examples:-

Ahi-min koto wo nomi koso (omohoyure).

Chikara aru hito ni te koso (are).

I think of nothing but of our meeting.

He is indeed a powerful man.

The older poems in the *Manyôshiu* have occasionally a perfect without *koso* or with a *koso* after the perfect. Even at present a pure Japanese style admits the perfect form in the case of the future particle, notwithstanding that *koso* may not have preceded it.

Examples:-

Inishihe mo shika nare koso.

Ikasama ni
Omohoshimese ka?
Kaha ni "kosu" to ifu koto
arame ya ha?

Even in ancient times thus and thus only was it.

How has he thought? i.e., what has been his reason?

Is it likely that there should be such an expression as "kosu" in speaking of rivers?

The modern popular style has often an attributive form after koso.

RULE III. If koso occurs in the same sentence with zo, nan, or an interrogative, the verb or adjective follows the government of koso.

Examples:—

Ohohara ya!
Oshiho no yama mo

Oh! Ôhara! Even thy mountain of Oshio, Kefu koso ha Kami yo no koto mo

Omohi idzurame.

On this day of all others, The events of the age of the gods

Will have called to mind.

RULE IV. When one of the particles enumerated in Rules I. and II. occurs in a dependent clause, it does not affect either the verb of the dependent or of the principal clause.

Sugata koso Nezame no yuka ni

Mihezu to mo. Koyohi bakari ya (kon) to machi-keru sama nari. Even though I see not thy form when I lie awake in my bed.

It was the appearance of one who waited (thinking) will he (come) to-night.

Exception. When the dependent clause is a quotation it is treated as a principal clause, and the verb or adjective which closes it follows the usual government. The reason for this is that the Japanese language has no distinguishing forms to mark indirect narration, and sentences must be repeated exactly as they were originally spoken, preserving of course their original grammar as independent sentences.

Examples:-

Tomo ni koso

Hana vo mo mime to
Matsu hito.
Iku yo ka heshi to
Tohamashi mono voo.

He whom I awaited, in order that we might see the flowers together.

They would ask, "How many nights have passed?"

This exception is not invariably observed. In good authors a conclusive form is occasionally found before *to* even when one of the particles enumerated in Rules I. and II. precedes the verb. This construction appears somewhat abnormal, and is no doubt traceable to a notion that "to" governs the verb before it in the conclusive form.

Example:—

Kane no oto ni

Ima ya akenu to (omohite).

Nagamureba

Nawo kumo fukashi— Mine no shirayuki. At the sound of the bell,

"Hath day now broken?" (thought I).

When I looked out, the cloud of night was still deep over the white snow of the mountain-peaks.

Where to is not the mark of quotation, as in to mo, the verb preceding it is unaffected by the particles in the clause with which it terminates.

Example:-

Asasa koso

Hito ha miru to mo.

Even though men should see its shallowness.

RULE V. Va at the end of a clause does not affect the form of the verb or adjective which precedes, but at the end of a dependent clause, it governs the verb or adjective of the principal clause in the attributive form.

Examples:--

Hototogisu

Konoha gakure no

Kohe ha kikoyu ya? Kurenai ni

Kurenai ni

Shiworeshi sode mo

Kuchi hatenu-

Arabaya hito ni

Iro mo misubeki.

Can I hear the cry of the hototogisu hidden among the leaves of the trees?

My sleeves that once hung down scarlet are now utterly decayed—if only their former colour remained, there is one to whom I would show it.

RULE VI. Ka, kana, and zo, at the end of a sentence, govern the verb or adjective which precedes in the attributive form.*

^{*} In these cases the verb or adjective is really a noun. Ka and kana are equivalent to aru ka, aru kana, and the verb aru is understood after zo.

Aru ka: naki ka? Nigori ni kaho mihenu zo. Is there (or) is there not?

In the muddy water my face cannot be seen.

In poetry, sentences are often met with which do not end in a verb or adjective in the conclusive form, notwithstanding that they contain none of the particles enumerated in Rules I. and II. These cases will generally fall under one of the following heads.

- (a) An inversion of the ordinary construction has taken place, as in the examples quoted above, p. 171.
- (b) A verb or adjective is understood which may be supplied from the context.

Examples:-

Toki shiranu Yama ha Fuji no ne. The mountain which knows not time is the peak of Fuji.

Here nari is to be supplied after ne.

Aratama no

Toshi tachi-kaheru

Ashita yori

Masaruru mono ha Uguhisu no kohe. The thing which is more excellent than the morn of the new year when it comes round again is the note of the uguisu.

Nari is again to be supplied at the end of this sentence.

Aki hagi ni

Nihoheru waga mo

Nurenu to mo

Kimi ga mifune no

Tsuna shi tori teba

If I might only take hold of the towing-rope of thy boat, (I care not) even though I wet my garments steeped in the odour of the autumn hagi.

In this sentence there is an inversion of the ordinary construction, and some such word as *kamahazu*, "I care not," has to be supplied.

Akatsuki no
Kane no kohe koso
Kikoyu nare—
Kore wo iri-ahi to
Omohamashikaba.

It is none other than the sound of the bell of day-dawn that we hear—if we could only fancy that it was that of night-fall (it would be pleasant).

 $\left(c\right)$ The whole sentence has the force of an exclamation.

Examples :---

Tohoku areba
Wabi te mo aru wo—
Sato chikaku
Ari to kiki tsutsu
Minu ga subenasa!

Furu yuki no
Mi no shiro-goromo
Uchi-ki tsutsu
Haru ki ni keri to
Odorokarenuru!
Idzure ka hashi to
Tohedo kotahenu!

If thou were far from me, I might wait in patience, but (wo) Oh! the helpless misery of not seeing thee while hearing that thou art near my dwelling-place!

Whilst putting on my clothes white as the falling snow, (imagine) my surprise to find that spring had

come!

I inquire, Where is the bridge? But alas! no answer!

These sentences are not statements of fact; they merely picture to the mind a state of things without making any assertion respecting it.

OTHER RULES OF SYNTAX.

I. When a suffix is common to a number of nouns it is placed after the last only.

Examples:-

Oya kiôdai niôbô wo sutete niguru.

To run away abandoning one's parents, brother and sister and wife.

II. When an inflection is common to two or more inflected words, it is put with the last of the series only, all which precede being put in the adverbial form.

Examples:-

Ayashiku uruwashiku medetaki mono nari.

Kate wo tori, hayaku tsu-tsume.

Chi sake, yama ochi-iri, kaha sakashima ni nagaru.

It is a wonderful, graceful, and beautiful object.

Take the provisions, and make them into a parcel quickly.

The earth gapes, mountains collapse, and rivers flow backwards.

Here *sake* and *ochi-iri* are adverbial forms put instead of the conclusive forms *saku* and *ochi-iru*, the last verb only of the series, viz., *nagaru*, retaining the inflection of the conclusive form.

Dorogaha ni shôzuru ha niku akaku, abura ohoshi.

As to those which are produced in muddy streams, their flesh is red and their fat plentiful.

Kehashiku takaki tokoro.

A steep and high place.

In this phrase, both *kehashiku* and *takaki* are epithets of *tokoro*, but, by the rule above stated, only the last—viz., *takaki* — takes the appropriate inflection, *i.e.*, that of the attributive form.

Exception. If two adjectives qualify different parts of the same noun, both are put in the attributive form, as in the example yukiki no mono takaki iyashiki wo ihazu, yobiatsumu, "He called together the passers-by without respect of highness or lowness of rank."

III. Adjectives used as interjections are placed in the root form.

Examples:-

Ana u!

Ana kanashi!

Kanashi na!

Ajikina va!

How miserable! How lamentable! How lamentable! How tiresome!

IV. There are no grammatical forms to distinguish indirect from direct narration. A speech is reported without any change further than the addition of the particle to, "that." Thus the speech ware ha shirasu, "I do not know," if repeated by another person is repeated without change, as, for instance, ware ha shirasu to mafusu, "He said he did not know."

V. An interrogative at the beginning of a sentence is accompanied by ka, not ya, at the end. This rule is often disregarded by modern writers.

VI. The nominative case is often placed absolutely, *i.e.*, without a verb. Ex.: Okina miko ni mafusu yô, "The manner of the speech of the old man to the Prince."

VII. The genitive case sometimes dispenses with the particles no or ga, as hototogisu kohe, "The cry of the hototogisu."

VIII. The particle to, "and," is often omitted, as asa yufu, "morning and evening."

KEN-YÔ-GEN.

The ken-yô-gen is a species of pun. An example in English is found in Thackeray's novel The Newcomes where he speaks of the teapot presented to Mr. Honeyman by the devotees attending his chapel as the "devoteapot." Here the syllable "tea" stands at the same time for the last syllable of "devotee" and the first syllable of "teapot." This is a very common ornament of style, not only in poetry, but in the more adorned passages of prose compositions. The severer taste of the old classical authors rejects the ken-yô-gen. It is seldom found in the Manyôshiu.

Ex.: Ikitaki kokochi naku bakari, "Having no desire to

SYNTAX. 183

live, and doing nothing but weep." Here *naku* must be taken twice. The first time it is the negative adverb "not," the second it is the verb "to weep."

Namida no kawaku ma mo naki-kurasu, "She spent her time in weeping, there being no interval in which her tears might dry." In this sentence naku, "not," must be supplied from naki, the root of naku, "to weep."

Vo no naka wo

Somuki ni to te ha Kosh**i**kadomo

Naho uki koto ha

Oho-hara no sato.

O village of Ohohara! Still there are many sorrows for me, though I have come hither to avoid the world.

In the last example *ohoshi*, "many," has to be supplied from *Ohohara*, the name of a village.

CHAPTER X.

PROSODY.

Metre. Japanese poetry has neither rhyme, assonance, nor quantity. It is not marked by a regular succession of accented syllables, as in English, and is only distinguished from prose by metre. Broadly speaking, all Japanese metre consists in the alternation or mixture of feet, or rather lines (何) of five and seven syllables. Lines of three, four, six, and eight syllables may be found in the oldest poetry, and in modern popular verse the metre is far from regular, but these variations are not intentional, and in singing or chanting, the proper length of the lines is preserved. There is no Japanese metre into which lines of other than five and seven syllables are regularly admitted.

Each kana counts as a syltable, including n final, which was originally mu, and is not unfrequently written so in poetry. Chinese words are not admissible in classical poetry, but in the modern popular poetry, where Chinese words do occur, the same rule holds good. $Ri\hat{o}$ - $koku(y + \dot{p} = \rho)$ for instance counts as five syllables, bon- $n\hat{o}$ ($\vec{x} \times \vec{r} \neq 0$) as four.

Jui.

The end of a line must also be the end of a word.

Tanka or mijika-uta, i.e., "short poetry," so called to distinguish it from naga-uta, or "long poetry," is by far the commonest Japanese metre, and when the general term uta is used, it is this metre which is commonly meant. It consists of five lines of five, seven, five, seven and seven syllables, or thirty-one syllables in all. There is a pause between the third and fourth lines, the former part being called the kami no ku, the latter the shimo no ku. This division usually coincides with a break in the sense.

Each verse of thirty-one syllables is an entire poem.

Examples of tanka:-

THE MOON.

Nubatama no
Yo wataru tsuki wo
Omoshiromi—
Waga woru sode ni
Tsuvu zo ori ni keru,

Whilst enjoying the sight of the moon crossing the dark night — On the sleeves of me waiting, there has descended the dew.

LOVE IN A SHOWER.

Wag' imoko ga Aka-mo no suso no Hidzuchi nan Kefu no kosame ni Ware sahe nure na. Let me too be drenched with the fine rain of to-day, which is doubtless wetting the skirts of my love's crimson raiment.

LEAVING HOME.

Idete inaba Nushi naki yado to Narinu to mo, Nokiba no mum**e** yo Haru wo wasuruna. When I am gone, Though my dwelling become tenantless,

Do not thou, O plum-tree by the eaves! forget the spring.

Renka is where one person composes part (commonly the second part) of a tanka, the remainder being added by some one else.

Kiôka, or "mad poetry," is a modern and vulgar kind of poetry, composed in the old classical metres, especially tanka. It differs from classical poetry by admitting words of Chinese derivation, and in being much less choice in its diction and subject-matter. It will be seen from the following examples that it deals largely in punning and plays upon words:—

LOVE IN A SMITHY.

Kaharaji to Tagahi ni kitahe Ahi-dzuchi no Suhe ha fuigo no Fît-fu to zo naru. The pair of sledge-hammers having tempered each other to eternal constancy, become at last the bellows' { puff-puff. } husband and wife.

There is here a pun on $f\hat{u}$ -fu, which is an onomatopoetic word for the puffing sound of bellows, and may also mean "husband and wife."

IS MY LOVE THE THUNDER-GOD.

Misometsuru Hito ha jiu ku ka Hatata kami Narihira sama ka Hikaru Genji ka? Is the man whom I love nineteen or twenty? Or the Thunder-God? Or is he Narihira, or Hikaru (bright) Genji?

From hatata kami, "the Thunder-God," there is understood hatachi ka, "Is he twenty?" Narihira and Genji are names of beautiful youths, as we might say Apollo or Adonis.

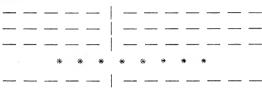

Kami-nari (end of third line and beginning of fourth) also means "thunder," and Hikaru, one of the names of Genji, is inserted, because the root of the verb hik, "to be bright," is the second part of the word inabikari, "lightning."

ARDENT LOVE.

Mono omoheba, Kaha no hanabi mo Waga mi yori Pon to idetaru Tama ya to zo miru. Thinking of my love, the very fire-works over the river seem as if they were balls issuing with a bang from my own body.

Naga-uta or chô-ka, i.e., "long poetry." Next to tanka, the commonest classical metre is naga-uta. Some of the best poetry which Japan has produced is in this metre. It con-

sists of a series of couplets of lines of five and seven syllables, the end of the poem being marked by an additional line of seven syllables, thus:—

Two additional lines of seven syllables are sometimes found instead of one.

The following specimen of *naga-uta* is from the *Manyôshiu* (vol. vi. fol. 55, of Riakuge edition).

IN PRAISE OF THE PALACE OF FUTAGI.

Waga ohokimi | kami no mikoto no,
Takashirasu | Futagi no miya ha,
Momoki nasu | yama ha kodakashi,
Ochi-tagitsu | se no 'to mo kiyoshi:
Uguhisu no | ki-naku harube ha,
Ihaho ni ha | yama-shita hikaru,
Nishiki nasu | hana saki wovvori;
Sa woshika no | tsuma yobu aki ha,
Amagirafu | shigure wo itami,
Sanidzurafu | momiji chiri-tsutsu,
Yachi tose ni | are-tsugashi-tsutsu,
Ame no shita | shirashimesan to—
Momo yo ni mo | kaharubekaranu
Ohomiya-dokoro.

By the palace of Futagi, Where our great King And divine lord Holds high rule, Gentle is the rise of the hills, Bearing hundreds of trees, Pleasant is the murmur of the rapids, As downward they rush:

So long as in the spring-time, (When the nightingale comes and sings) On the rocks Brocade-like flowers blossom, Brightening the mountain-foot;

So long as in the autumn (When the stag calls to his mate)
The red leaves fall hither and thither Wounded by the showers—
The heaven beclouding,

For many thousand years
May his life be prolonged
To rule over all under heaven
In the great palace
Destined to remain unchanged
For hundreds of ages.

Hanka or kaheshi-uta. The naga-uta is usually followed by one or more tanka of the ordinary length of thirty-one syllables. These are called hanka. They sometimes contain the principal idea of the poem which precedes in a short, pithy form, and are at others employed as a sort of poetical save-all to utilize any scrap of imagery which it has been inconvenient to include in the naga-uta itself. The naga-uta quoted above is followed by five hanka, the first of which will serve as a specimen:—

Idzumigaha
Yuku se no midzu no
Taheba koso—
Ohomiya-dokoro
Utsurohi-yukame!

When the flowing waters of the rapids of the river Idzumi fail—then, and not till then, may our great palace suffer change!

The hanka is occasionally not a tanka, but a sedôka.

Sedôka consists of six lines, of five, seven, seven, five, seven, and seven syllables (5, 7, 7, 5, 7, 7), i.e., it is a tanka with an additional line of seven syllables inserted between the second and third lines. The pause in sedôka is after the third line. It is a characteristic of this metre that the last line usually contains a repetition of some word or phrase in the earlier lines.

Examples of sedôka:-

LOVE IN ABSENCE.

Ikenobe no
Wo-dzuki no moto no
Shinu na kari so ne
Sore wo dani
Kimi ga katami ni
Mi tsutsu shinuban.

Oh! cut not the bamboo grass at the foot of the little elm tree by the pond side. If naught else is left to me, I would bear (my loneliness) looking upon it as a memento of thee.

PITY FOR THE LABOURER.

Haru hi sura
Ta ni tachi-tsukaru
Kimi ha kanashi mo—
Waka kusa no
Tsuma naki kimi
Ta ni tachi-tsukaru.

I pity thee that thou becomest weary in the ricefield even on this spring day; (I pity thee) that, having no youthful spouse, thou becomest weary in the rice-field.

Hokku, as its name indicates, is the first part of a verse of tanka. It consists of three lines of five, seven, and five syllables, or seventeen syllables in all. The modern varieties

of poetry known as haikwai uta and senriu are chiefly composed in this metre, although the number of syllables is occasionally exceeded. As in the case of tanka, each hokku is an entire poem.

Examples of hokku:-

FUJI CONCEALED IN A MIST.

Kiri no umi Idzuko he Fuji ha Shidzumi nuru? Into a sea of mist whither hath Mt. Fuji sunk?

OLD AGE.

Hito ni koso Toshi ha yori nure Haru no kusa! It is only man who becomes aged, Oh thou grass of spring!

THE SUMMER SHOWER.

Yufudachi ya Ta wo mi-meguri no Kami naraba. Oh! if the summer shower were only a god who should make his round of visits to the rice-fields.

The last verse is an acrostic on the word *yutaka*, "wealth" or "prosperity."

IRREGULAR VERSE.

The four kinds of metre described above are the only regular metres known in Japanese poetry. To the first three of these, viz., tanka, naga-uta, and sedôka, belongs all poetry recognized as classical. The admirers of haikwai uta claim for it a quasi-classical character; but it is objected, with much reason, that nothing which deserves the name of poetry can well be contained in the narrow compass of a verse of seventeen syllables.

There remains a large quantity of popular poetry which cannot be reduced to any regular metre. It is, however, distinguishable from prose by a more or less regular alternation of lines of five and seven syllables. The character of the

versification of some of the principal varieties will be seen from the following specimens.

Saibara is a kind of popular lyrical poetry of considerable antiquity. The following drinking-song may be given as a specimen:—

Drinking sale

Tari chiri ra.

1	Sake wo tauvete	Dilliking sake,
5	Tabe-yeute	Drinking till we're drunken,
7	Tanto korin zo (ya!)	Then let us be right sober!
5	Maudekuru	As we come along
7	Na yorobohi so	Steady! no staggering!
5	Maudekuru	As we come along
	Tanna tanna	With our tanna tanna
	Tariya ranna	Tariya ranna

Caba sua tambata

Tari chiri ra.

Ya, in the third line, is an interjection, which in this kind of poetry does not count in the metre.

Kagura is also of considerable antiquity. As its name indicates, it was sung at the Shintô festivals. What is now known as kagura is dancing only, unaccompanied with singing

	iown as <i>kagura</i> is dancir nging.	ng only, unaccompanied with		
BOAT-SONG.				
I.				
5	Shinagatori	Manage well the helm of the		
7	Ina no minato ni (aizo!)	boat in the grebe-haunted		
5	Iru fune no	harbour of Ina.		
7	Kaji yoku makase ;	Let her not heel over,		
7	Fune katabukuna—	Let her not heel over.		
7	Fune ka t abukuna.			
II.				
5	Wakakusa no (ya!)	My young wife		
7	Imo mo noritari (ya!)	Is on board,		
	(Aizo!)			
7	Ware mo noritari (ya!);	And I too am on board;		
7	Fune katabukuna!	Let her not heel over,		
7	Fune katabukuna.	Let her not heel over.		

It will be seen that, if stripped of interjections and repetitions, the first of these stanzas is a verse of *tanka*, and the second a verse of *tanka* wanting the third line. A large proportion of *kagura* are *tanka* more or less disguised in this way.

Utahi. Japanese dramatic works are composed partly in prose and partly in verse. The speeches of the dramatis personæ, which are declaimed by the actors on the stage, are in prose, but these are always connected by a thread of narrative (as was, to some extent, the case in the older English drama) which is in verse and is chanted by a chorus. this latter part which is termed utahi. The Japanese have two kinds of drama, the more ancient of which is called no. The $n\hat{o}$ are short dramatic sketches, mostly of a religious character, and occupy a position in Japanese dramatic literature corresponding to that held by the "mysteries" in Europe. The following specimen of this kind of poetry is taken from a nô called Hakurakuten. The principal personage having announced that he has been commissioned by the Emperor of China to spy out the intelligence of the inhabitants of Japan, the chorus strikes in and thus describes his voyage:-

Fune kogi-idete Oaring forth his ship, He would visit the land 5 Hi no moto no Hi no moto no Of the quarter 547575575 Of the rising of the sun, Sonata no Of the rising of the sun. Kuni wo tadzunen. Tôkai no As she sails. Namiji haruka ni As she sails Yuku fune no Far over the wave-path Yuku fune no Of the Eastern sea. Ato ni iru hi no Behind her sets the sun, O'er her is the void of heaven Kage nokoru Where the cloud-banners Kumo no hatate no

Are still bright with 5 radiance -And now the moon comes Tsuki mata idanru forth: On the same quarter Sonata yori Mountains are first descried; Vama mihesomete 5 Hodo mo naku Ere long Nippon no chi ni mo Even at the land of Japan, He hath arrived. Tsuki ni keri. Tsuki ni keri. He hath arrived.

The following specimen of utahi is from a modern play called 'Ishikawa Governon.' It is a description of the preparations for boiling alive the celebrated robber of that name.

Shichi jô gahara; Ni chô yo hô ni Kaki yuhi-mahashi, Uchi ni tatetaru 7 Nukimi no vari-Kanahe ni suheshi 5 Oho-gama ha Jigoku no seme wo Kono vo kara Mi ni atsumarishi Gunjiu no naka Saki wo harafute 7 Hayano Yatôji 7 Iwaki Tôma mo Ahi-yaku ni Ihi-tsukerarete Zehi naku mo Shôgi ni kakaru Ato vori mo

Shioki no basho ha

Amatsu sora-

The place of execution is the bed of the river (Kamo) in the seventh division Kiôto): for 240 yards on all sides a fence has been tied around: within, upright spears naked points. and great caldron mounted on an iron tripod! Clearing his way before him through the multitude which has assembled to see from this world the tortures of hell, Hayano Yatôji. comes with him Along Tôma, appointed to be his colleague, reluctantly takes his seat on a camp stool. From behind them Hiôbu,

7 Oya no Hiôbu ha Kokoro mo sora

8 Kanahanu nagara mo

Tachi mukahi. 5

the (culprit's) father with heart empty of hope, fruitless though he feels it. standing forth opposite. [Here follows Hiôbu's speech in prose.]

The following is a specimen of the popular lyrical poetry of the present day:-

Afu to mishi

7 Yume ha munashiku;

Samete mata

7 Tsuraki utsutsu no

Yami no uchi.

7 Omohite mitemo

Fusahidemo 5

7 Hon ni kokoro no

7 Yarukata mo naya!

7 Dou de aharenu

5 Uki-yo nara

7 Miyama no oku no

Sono oku no

7 Zutsuto no oku ni

5 Sumahi shite.

7 Hito-me omohade

7 Mono omohitaya.

I. Vain has been the dream In which I thought that we

Awake, I find myself again

In the darkness

met:

Of the wretched reality.

Whether I try to hope

Or give way to gloomy thought

Truly for my heart There is no relief!

H.

If this is such a miserable world that I may not meet thee.

Oh! let me take up my abode

Deep in the far mountains

And deeper still

In their furthest depths,

Where, careless of men's gaze,

I may think of my love.

It will be observed that the metre of the above differs only slightly from naga-uta.

ELISION.

In Japanese poetry, elision may consist either in dropping

the final vowel of a word before the initial vowel of the next. or in taking away the first vowel of a word after the final vowel of the one preceding. Thus we have wag'imoko for waga-imoko, but kikanu hi' maneku for kikanu hi amaneku.

Elision is optional, except when two vowels come together in different parts of a compound, in which case it is compulsory. For instance, midzu-umi, "a lake," can never count as four syllables in poetry. It must be read midz' umi.

Elisions are sometimes expressed in writing, but oftener they are left to the discrimination of the reader.

The vowel e cannot be elided.

Tsuiku, i.e., opposite or corresponding lines. This is a frequent ornament of Japanese naga-uta. It consists of a parallelism of meaning or construction in two consecutive or sometimes alternate lines or stanzas. Hebrew and Chinese poetry afford numerous examples of it, and even in English poetry it is not unfrequently met with. The following lines from Longfellow's 'Hiawatha' are tsuiku:-

> "Ye who love the haunts of nature, Love the sunshine of the meadow, Love the shadow of the forest "—

A more elaborate kind of parallelism is exemplified in the poem entitled 'Seaweed,' by the same author.

The following example is from the naga-uta in the Manvôshiu :--

> CONSTANT LOVE. Mivoshinu no | Mikane no take ni (Hima naku zo | ame ha furu tofu (for to ifu) Tokijiku zo | yuki ha furu tofu | Sono ame no | hima naki ga goto | Sono yuki no | tokijiku ga goto Hima mo ochizu | ware ha zo kofuru Imoga tadaka ni.

On the peak of Mikane in Miyoshinu,

{ It is said that the rain falls unceasingly,
 It is said that the snow is ever falling:
 { Like that rain which never ceases,
 Like that snow that is ever falling,
 Without intermission do I long
 For thy charms.

MAKURA-KOTOBA.

Makura-kotoba, called also kamuri-kotoba or okoshi-kotoba, are a peculiar feature of Japanese poetry. They are ornamental epithets or phrases resembling in some degree the Homeric epithets of persons and places, but of a still more conventional character. Each makura-kotoba is prefixed to a few words or phrases only, and, on the other hand, the number of makura-kotoba which can be applied to the same words seldom exceeds three or four. What marks even more plainly their conventional character is the circumstance that when a word to which a makura-kotoba belongs has several meanings or applications the makura-kotoba may be applied to it in all, however meaningless or inappropriate it may be. Isanadori, "whale-catching," for instance, is an epithet of umi, "the sea"; but it is also freely applied to inland lakes, such as the lake of Ômi (Lake Biwa), where, of course, no whales are to be found. In very many cases the word to which the makurakotoba belongs must be taken in one sense with it, and in another with the rest of the sentence. This is the figure already described under the name Kenyôgen. [See p. 182.] Thus, in a poem about the town of Akashi it has the epithet tomoshibi no, "of the light," because akashi also means "to throw light upon." Makura-kotoba are not invariably of the nature of adjectives. Some are the direct or indirect complements of verbs prefixed to them as a sort of ornamental introduction. In Imo ga me wo Misome no saki, the makura-

kotoba, imo ga me wo, "thine eyes," is the accusative case governed by the verb misome, "to see for the first time," which is to be supplied from Misome no saki, "Cape Misome."

Makura-kotoba almost invariably consist of five syllables, and even when they are of three, four, or six, as is sometimes the case, they always constitute the first line in tanka, or the first line of a couplet in naga-uta.

The makura-kotoba are one of the principal difficulties of the old poetry. They are in many cases remnants of the form of the language which existed prior to any written literature, and their derivation, meaning, and grammatical construction are often obscure.*

Examples of makura-kotoba:

Nubatama no yo.

The tsu dori kake.

Ashi ga chiru Naniha.

Imo ga te wo Toroshi no ike.

Wag'imoko ni Ahaji no The island of Awaji no my shima.

Black night. [Nubatama is the name of a black berry.]

The bird of the house, the cock

Naniwa, where the reeds are scattered.

The pond of {taking my love's hand.

love.

In the last two examples Toroshi and Ahaji are ken-vô-gen. From Toroshi is understood toru, "to take," and Ahaji, besides being the name of a place, also means "I shall not meet."

> Ahajima no aharedo. Untranslatable.

Here the first two syllables of aharedo, "though I meet." suggest Ahajima, the name of an island, which is accordingly installed as a makura-kotoba without the slightest regard to meaning.

^{*} The student of Japanese poetry is recommended to provide himself with the dictionary of makura-kotoba called Kanjikô, and its supplement, Kanjizokuchô.

Yamabuki no Nihoheru imo Kakitsubata Nihoheru iwa My love, whose charms are bright as the *kerria*.

My love, whose charms are bright as the iris.

No, as in the first of these examples, often means "like" in makura-kotoba, and is often omitted, as in the second example.

Wada no soko Oki tsu fukami. The depths of the open sea — of the bottom of the ocean.

Arare furi Kashima no saki. The hail is falling — Cape Kashima.

Arare furi is brought in here as a makura-kotoba, not in the least because Cape Kashima is noted for hail-storms, but because Kashima suggests kashimashiki, "noisy," which is a good epithet for a hail-storm. Ordinary syntax would have required arare furu.

Joka, or "introductory verse," is a more extended kind of makura-kotoba.

Example:—

Adzusa yumi | te ni tori mochite Masurawo no | satsuya tabasami Tachimukafu | Taka-mato-yama ni Haru nu yaku, &c.

The spring-moors are burning on the hill of High-target, opposite which one stands with *adzusa* bow in hand and the warrior's trusty arrows.

Here the poem really begins at *Taka-mato-yama*, all that precedes being only an epithet of *mato*, "target," taken from the name of the mountain.

TRANSLATION.

Hereupon (the god Izanagi) wishing to see face to face his wife the goddess Izanami, went after her to the country of Yomi. So when she came out to meet him from the palace-door, the god Izanagi thus addressed her and said: "My dear wife! the country which thou and I have made is not yet finished; therefore come back." Hereupon the goddess Izanami said: "How lamentable! By thy not having

come sooner, I have eaten of the cooking-pots of Yomi. Nevertheless, as I reverence the having entered here of thee, my beloved husband, I will return. But I will in the first place discuss it fully with the god of Yomi. Do not thou look upon me." Having thus spoken, she returned within her palace, but her stay being very long, he was unable to wait. He broke off one of the end-teeth of the many and close-toothed comb which was stuck in the left bunch of his hair and making a light, he entered and looked. had bred and she was putrefying. On her head there sat the great-thunder; on her breast, the fire-thunder; on her belly, the black-thunder; on her groin, the cleaving-thunder; on her left hand, the young-thunder; on her right hand, the earth-thunder; on her left foot, the rumbling-thunder; on her right foot, the lying-thunder. In all, eight kinds of thunder-gods had been produced and were there.

NOTES.

This is an extract from the *Kojiki*, one of the oldest monuments of Japanese literature. Its value to the student of the language is, however, much lessened by the fact that it has been written in Chinese characters in such a way as to render the original Japanese words extremely difficult to ascertain. Motowori's attempt to restore the Japanese as it was read is shown in the *katakana* to the right of the Chinese characters, but there are many places where his version cannot possibly be correct, and it is impossible to accept it unreservedly as genuine Japanese of the period when the *Kojiki* was written. It will be observed that the Chinese order of the sentences is followed in the original text.

Nearly all the Chinese characters in this work are *mana*, *i.e.*, they have an ideögraphic value, the principal exceptions being proper names, lines of poetry, and words for which the writer apparently could find no convenient Chinese equivalent.

¹ Imo means in the old literature either younger sister or wife. It contains the root mo, "woman."—² Izanami. The characters for this word are kana.—³ Mimaku, "the seeing." Mimaku is a noun governed in the accusative case by omohoshite.—⁴ Yomo tsu kuni. Tsu is the old genitive particle. Yomo or yomi, "Hades," probably connected with yoru,

'night.'— Ide-mashi-ki. There is only one Chinese character, viz, 往, for this. 往, however, represents only ide, and the remainder is a conjecture of Motowori's. The honorific words such as masu, tamafu, mi, &c., and the suffixes are for the most part not in the original, and have been introduced by Motowori on his own authority.—6 Utsukushiki, in the old language, "beloved"; in the later language, "lovely," "pretty."—

⁷ Aga, archaic for waga.— Nanimo for na no imo, "thou, my wife," na being an old word for "thou."—9 Are, archaic for ware.—10 Mimashi, an old word for "thou."—11 Tsukurerishi, perfect of tsukuru, "to make," with shi, the attributive form of the past particle.—12 To nori-tamahi ki. All this is Motowori's, and is not found in the original. Noru is an old word meaning "to say."-13 He-guhi. Motowori says that he means "a cooking place." Guhi is the root of kufu, "to eat," with the nigori. ¹⁴ Shitsu. Tsu is the conclusive form of the particle tsuru. nothing for it in the original.—15 Nasc is the masculine of nanimo mentioned above. Se is "elder brother," or "husband." The characters for nase are kana.—¹⁶IVo after kaherinan is not in the original. Its force is given in the translation by "but."—17 A, archaic for ware, "I." ¹⁸Nuchi ni is for no uchi ni — ¹⁹ Mi-midzura, Midzura is in kana,— ²⁰ Yutsu is for *i-ho-tsu*, *i.e.*, "five hundred," put here for "a large number." —²¹ Tsuma is connected with tsumu, "to pack close."—²² Wo-bashira, lit. "male-post," the large tooth at the end of the comb. - "Uji takare tororogite. Apparently the writer was at a loss how to express this in Chinese, and consequently had recourse to kana.—24 Migiri, archaic for migi.

岐* 豆》 智ガ

H.

H.

This line of poetry is taken from the *Kojiki*. It is said to be the earliest example of *tanka*, and dates probably from the sixth or seventh century A.D. It shows how Japanese was written before the invention of *Katakana* and *Hiragana*. The Chinese characters used here have all a phonetic value. The *Katakana* are an addition by a later editor.

VERSION IN ROMAN LETTERS.

Ya-kumo¹ tatsu: Idzumo² ya-he-gaki; Tsuma-gomi³ ni Ya-he-gaki tsukuru: Sono ya-he-gaki wo!

TRANSLATION.

Many clouds arise:
On all sides they form a manifold fence:
For the husband and wife to retire within
They have formed a manifold fence:
Oh! that manifold fence!

NOTES.

It was the custom in ancient Japan to prepare a special hut for the consummation of a marriage. When Susanowo (the Rainstorm God) wedded Inada Hime (the Rice-field Goddess) the clouds gathered round on all sides to form such a hut for them.

¹ Va is the same root which is also found in yatsu, "eight." It is here put generally for a large number.—² Idzumo. Motowori derives this word as the name of a province from ide-kumo, i.e., "the clouds which come forth." Idzumo is really equivalent to idzuremo or doremo, "each," i.e., "on each hand." There is no doubt an allusion to the name of the province Idzumo.—³ Tsuma-gomi. Another reading is tsuma-gome, i.e., the transitive form instead of the intransitive. This would mean "to shut up my wife or the husband and wife in," tsuma being applicable to both sexes in the old language, and not confined to either number.

TRANSLATION.

When the days of spring were hazy,
I went forth upon the beach of Suminoe,
And, as I watched the fishing-boats rock to and fro,
I bethought me of the tale of old:
(How) Urashima of Midzunoe,
Proud of his skill in catching the katsuwo and tai,
For seven days not even coming home,
Rowed on beyond the bounds of the ocean,

Where with a daughter of the god of the sea

He chanced to meet as he rowed onwards.

When with mutual endearments their love had been crowned,

They plighted their troths, and went to the immortal land,

Where hand-in-hand both entered

Into a stately mansion within the precinct

Of the palace of the god of the sea,

There to remain for everlasting,

Never growing old, nor ever dying.

But this was the speech which was addressed to his spouse,

By the foolish man of this world-

"For a little while I would return home,

And speak to my father and my mother:

To-morrow I will come back."

When he had said so, this was the speech of his spouse-

" If thou art to return again to the immortal land

And live with me as now,

Open not this casket at all."

Much did she impress this on him,

But he, having returned to Suminoe,

Though he looked for his house.

No house could he see:

Though he looked for his native village,

No village could he see.

"This is strange," said he; thereupon this was his thought-

"In the space of three years since I came forth from my home.

Can the house have vanished, without even the fence (being left)?

If I opened this casket, and saw (the result)

Should my house exist as before?"

Opening a little the jewel-casket,

A white cloud came forth from it

And spread away towards the immortal land.

He ran, he shouted, he waved his sleeves,
He rolled upon the earth, and ground his feet together.
Meanwhile, of a sudden, his vigour decayed and departed:
His body that had been young grew wrinkled;
His hair, too, that had been black grew white;
Also his breath became feebler bye and bye.
Afterwards, at last his life departed,
And of Urashima of Midzunoe,
The dwelling-place I can see.

HANKA.

In the immortal land
He might have continued to dwell,
But of his own natural disposition,
How foolish was he, this wight!

NOTES.

The Manyôshiu, as may be seen from this specimen, is written in mana, with kana intermixed. The kana are however, much more numerous than in the Kojiki, and there is the additional guide of the metre, so that there is here some certainty that we have before us the genuine Japanese language of the period. In fact, it is by means of the knowledge of the old language acquired from the Manyôshiu that Motowori has endeavoured to restore the Japanese version of the Kojiki.

Metre.—For the metre of this poem see under Naga-uta, p. 186.

¹ Tayutafu. Another reading is toworafu, a lengthened form of toworu, "to pass."—² Katsuwo. The bonito.—³ Tai, the serranus marginalis, a fish greatly prized in Japan as a delicacy.—⁴ Unasaka, the same as umisaka, "the bounds of ocean," "the horizon."—⁵ Sugite kogi-yuku ni. This line has a syllable too many.—⁶ Watadzumi, for wata-tsu-umi, wata being an old word for "sea," and tsu the genitive particle.—¹ Shimaraku, old form for "shibaraku."—⁶ Koto nearly always means something said in the old language.—⁶ Norahi, a lengthened form instead of nori.—¹⁰ Yume, "a dream." Hirakuna yume, "open not even a dream," i.e. not at all. Tsuyu, "dew," is used in the same way.—¹¹ Ihe yu. Yu is old Japanese for yori.—¹² Dete. The initial i is removed by elision for the sake of the metre.—¹³ Useme. Me is the perfect form of the future suffix mu. It is not unfrequently found before ya.—¹⁴ Moto no goto. Later

Japanese would have gotoku.—15 Shirakumo no. The complement to no is to be supplied from tanabikinureba, "as there was an extending away of a white cloud," &c.—16 Yuna-yuna, an adverb, "nightly," connected with yo or yoru, "night."—17 Sahe, "too." This is the original meaning of sahe.—18 Ihe-dokoro is interpreted by Motowori to mean the ruins of the house. It may perhaps mean his tomb, by a figure not uncommon in Japanese poetry.—19 Tsurugi-dachi is a makura-kotoba consisting of two words meaning "sword." I have not been able to find any satisfactory explanation of its being prefixed to shi, the reflexive pronoun.—20 Oso ya. Oso is the root of osoki, "slow," "dull," "foolish."

TRANSLATION.

Thus spoke the old man to the prince: "In what manner of place can this tree have been? What a marvellous, graceful, and lovely thing it is!" Thus he spoke, and the prince answered and said: "Three years ago, on the tenth day of the second month, we embarked from Naniwa (Ôsaka). When we put forth into the mid-ocean, we knew not even the direction in which to go, but as I felt that unless my heart's desire were fulfilled what should I do living in this world, we sailed on, merely trusting our course to the empty winds. our lives perish, what help is there for it—so long as life remains, sailing on thus, we shall reach, it may be, this mountain called, if we are rightly informed, Hôrai. With such thoughts we rowed on over the ocean; and tossed about until we left the bounds of our own country far behind us. In the wanderings which we then made, we were at one time like to go down even to the bottom of the sea whilst the waves were raging; at another time, driven by the wind, we were borne to an unknown land, where creatures like devils came forth and endeavoured to slay us. At one time, knowing neither the way we had come nor the course we ought to follow, we were almost lost upon the sea; at another time our provisions became spent and we used the roots of herbs for food. Once, beings hideous beyond expression came and attempted to devour us, and once we sustained life by gathering the shells of the sea. Under a strange sky where there was none to render us aid, we tossed about over the sea a prey to diseases of all kinds, and leaving the ship to her own spontaneous motion, for we knew not at all what course we should follow. At last when five hundred days had passed, about the hour of the dragon (8 A.M.) a mountain became

faintly visible in the midst of the sea. All in the ship looked steadily at it and saw that it was a very great mountain which floated about on the surface of the sea. The appearance of this mountain was lofty and picturesque. Thinking that this was doubtless the mountain of our search, no wonder we were filled with awe. After we had sailed round it for two or three days there came forth from amongst the hills a woman clothed like an inhabitant of heaven, and drew water in a silver vessel. Upon seeing her we landed from the ship, and asked what might be the name of this mountain. The woman replied and said: 'This is the mountain Hôrai.' Our joy at hearing this was unbounded. We inquired 'Who is the woman who tells us so?' 'My name is Hôkanruri,' she said, and of a sudden went away in amongst the hills."

NOTES.

This passage is taken from the *Taketori Monogatari*, a work of the classical age of Japanese literature.

¹ Miko, "a prince," is compounded of the honorific prefix mi and ko, "a child."—² Ni is the dative suffix.—⁸ Mafusu is the attributive or adjectival form of the verb mafusu (pron. $m\hat{o}su$), "to speak."—4 $Y\hat{o}$, "manner," is a noun in the nominative case, placed absolutely. It is, however, possible to supply some such words as kore nari after $y\delta$. This will be literally "The manner of speech of the old man to the prince was this." Miko ni mafusu is in this sentence an attributive clause qualifying yô. The Japanese language employs attributive clauses exclusively where a European language often prefers a construction involving the use of a relative pronoun. Thus miko ni mafusu vô might be rendered in English "The manner in which he addressed the prince."—5 Naru, "to be," is here in the attributive form because it qualifies the noun tokoro. Ika naru tokoro ni is literally "in a how being place."—6 Ka is the interrogative particle. It is in this sentence redundant, a question being already implied by the use of the word ika.—7 Kono is the adjectival form of kore, "this."—8 Ha is the distinctive or separative particle. It has here the force of concentrating the attention on the word ki.—9 Safurahi-ke-n. Safurahi is the adverbial form of the verb safurafu, "to be." [See p. 163.] The adverbial form is required before the particle ke. Ke is the negative base of the past suffix shi. The negative base is required

before *n*, which is the conclusive form of the future suffix *n* or *mu*. Safurahi-ke-n is literally "will have been."—\(^{10}\) Ayashiku uruha-shiku medetaki mono. Note that of the three adjectives qualifying mono, the last only is put in the attributive form, the two which precede being placed in the adverbial form.—\(^{11}\) Medetaki is derived from me-

dzuru, 'to love.' The letter \(\tau_{\ell}(te) \) is here read de, although there is no mark to show that this is the case. The nigori is omitted all through this passage, which is a facsimile of the Japanese printed edition.—12 Mo has here scarcely any meaning. After mo must be understood ari, which with the preceding ni make up nari, the conclusive form of naru, "to be." -13 To is a conjunction which may often be translated "that," but which cannot be conveniently rendered in this passage by any English word. It may be considered to be represented by the marks of quotation '.-14 Mafusu, "he said," is redundant, as the same idea has been already expressed in the words mafusu yô above.—15 Notamahaku is a poetical substitute for notamafu, a honorific word for mafusu. It is here a noun in the nominative case, placed absolutely. -16 Sa-oto-doshi, Oto-doshi means "the year before last." The addition of sa (for saki, "before") makes it mean another year further back.—17 Kisaragi, "the second month." The modern language always uses nigwatsu, a word of Chinese origin. Note in this sentence an example of the rule that clauses indicative of time precede clauses indicative of place.—18 *Ide-te*. *Ide* is the adverbial form of *idzuru*, "to go out."—19 *Yuka-n* is *yuka*, the negative base of *yuku*, "to go," with the attributive form of the future suffix n or mu.—²⁰ Shirazu is shira, the negative base of *shiru*, "to know," with zu, the adverbial form of the negative suffix nu. Shirazu is here an adverb qualifying the verb obohe which follows.—21 Obohe-shika-do is obohe, adverbial form of the verb oboyuru, "to think," "to feel; "shika is the perfect of the past suffix shi; and do is the concessive particle meaning "although." Shirazu oboheshikado is "although we felt ignorant." Note how each particle governs the form which precedes, shika requiring an adverbial form before it, do a perfect, and zu a negative base.— 22 Narade is nara, negative base of naru, "to be," with the indeclinable negative suffix de.—23 Iki is the adverbial form of ikiru, "to live."—24 Nanika ha. Ha after the interrogative suggests a negative answer.—25 Se-n is se, the negative base of the irregular verb *suru*, "to do," with the conclusive form of the future particle n.—²⁶ Omohi-shika-ba is omohi, adverbial form of the verb *omofu* "to think;" shika, perfect of shi, the past suffix, and ba, a suffix which after perfect forms means "as," "since," or "because."—27 Ariku is the conclusive form of the verb ariku or aruku, "to walk," "to go."— ²⁸ Shina-ba is shina, negative base of the irregular verb shinuru, "to die" with ba, a suffix which with this base means "if."—29 Ara-n is ara, negative base of aru, "to be," with the attributive form of the future particle n.—30 Kagiri, "limit," is the root of the verb kagiru, "to come to an end." It is here a noun. Iki-te ara-n kagiri. Lit. "the limit of our being alive, i.e. "so long as we remain alive."—\$1 Kaku, vulg. kô, "thus." -32 Hôrai to ifu, called "Hôrai." To has the force of the inverted commas before and after "Hôrai."—33 Ifu-ra-n. Ifu is the verb "to say," "to call;" ra is for ara, negative base of aru, "to be," and n is the future particle which has here a force which is attempted to be rendered in the translation "if we are rightly informed."—34 Afu ya. Afu is the conclusive form. Ya is an interrogative particle, but the question which it puts is addressed to the speaker himself, not to another. See the translation.—35 To. After to must be understood omohi-te.—36 Wa-ga kuni, i.e. Japan.—37 Uchi is literally "the inside."—38 Makari is probably an error of the text. The true reading is no doubt mawari, "to go about," "to wander." Shi is the attributive form of the past suffix. It is here a noun, as is seen by its having the particle ni suffixed. Arikimawarishi ni is "in the wanderings we then made."—39 Tsutsu. The particle tsutsu shows that the actions signified by the verbs are and *irinubeku* are regarded as simultaneous.—40 *Iri-nu-beku* is *iri*, adverbial form of iru, "to enter"; nu, conclusive form of the suffix nuru, and beku, adverbial form of the suffix beki. Nu is equal to te shimaii of the spoken language, beku has the meaning "probable," and the ki at the end of the sentence must be taken with *iri-nu-beku* as well as with *shi*, so that the full translation will be "Were (ki) like to (beku) enter (iri) utterly (nu)."—41 Tsukete. Tsuki-te (or tsuite) is the modern form. -4^2 Shira-nu is shira, negative base of shiru, "to know," followed by the attributive form of the negative particle nu.— 4^3 Fuki-yoserarete. Fuki, adverbial form of *fuku*, "to blow," is an adverb qualifying *yoserare*. *Yoserare* is the adverbial form of the passive of the transitive of the verb voru, "to approach.—44 Yô naru is the colloquial yôna.—45 Ide-ki-te, is ide adverbial form of *idzuru*, "to come out"; ki, adverbial form of kuru, "to come," and te, adverbial form of the suffix tsuru.—46 Korosa-n to shi-ki is literally "they made that they would kill us."—47 Koshi-kata. One of the irregularities of kuru, "to come," is that it attaches, as here, the past suffix shi to the negative base ko instead of to the adverbial form ki. —48 Shira-de is shira, negative base of shiru, "to know," with the negative suffix de.—49 Magire-n is magire, negative base of the verb of the second conjugation magiruru, "to mingle," "to become indistinct," with n the future suffix in the conclusive form.— 50 Shi is the adverbial form of suru, "to do," "to make." The past suffix ki at the end of the sentence must be taken with this shi as well as with the word along with which it is found.—51 Iha-n. Iha is the negative base of ifu, "to say." Iha-n kata naku, "unspeakably."—52 Mono no. See p. 107.—53 Iro-iro. Iro means "colour," iro-iro, "every colour," hence "all kinds of."—54 Yuku ni makasete. Yuku, "to go," is here treated as a noun in the sense of "movement."—55 I-ho-ka, "five hundred days," is derived from i, root of itsutsu, "five," ho, an old word meaning "hundred," and ka, the termination of the numerals for days.—⁵⁶ Miyu is the conclusive form of miyuru, "to appear," "to be visible," the intransitive verb corresponding to the transitive miru, "to see."—57 Fune no uchi wo. There is probably something wrong in the text here; wo can hardly be right, but the meaning is no doubt that given in the translation.—58 Tadayoheru is the attributive form of the perfect of tadayofu, "to toss about."—59 Ohoki is the predicate, the construction being yama ohoki nari (ni+ari), "the mountain is a great one."—60 Takaku is the adverbial form, while uruhashi (second conjugation of adjectives) which follows is put in the conclusive form. The meaning is the same as if both were in the conclusive form, viz., "was lofty and picturesque."—61 Waga motomuru yama. Note the force of the attributive form motomuru as equal to the relative clause "which (we) are in search of."—62 Mika. In the modern language mitsuka, pronounced mikka.—63 Shitaru. Note the force of the termination taru, indicating a continuous state.—64 Ureshiki koto is put, by an idiom very common in the spoken language, for the abstract noun ureshisa.—65 Kono womina and kaku notamafu are both nouns in the nominative case, placed in apposition. A more regular construction would have been kaku notamafu womina.—66 Iri-nu. The nu is represented by the word "away" in the translation.

VERSION IN ROMAN LETTERS.

Kaha wo kosu.

Yama ha¹ koyu to² ihi, kaha ha wataru to ifu³ zo sadamarinaru.⁴ Shikaru wo⁵ ima no hito tabi-ji no nikki nado ni "nani-gaha wo koshite" nado kaku⁶ ha imishiki¹ higakoto nari. Ima no hito ha kachi-watari naradeha⁵ "wataru" to ha ihanedo,⁴ mukashi ha¹⁰ umi kaha ha, hashi ni mare,¹¹ fune ni mare, nani ni mare, subete¹² "wataru" to koso ihi-tsure.¹³ Mata yama ha "koyu" to ihedomo,¹⁴ sore mo "kosu" to ha ihazu.¹⁵ "Koyu" to¹¹⁶ "kosu" to ha jita¹¹ no kejime ari. Mashite¹² kaha ni "kosu" to ifu koto arame ya¹٩ ha²⁰?

TRANSLATION.

Kaha wo kosu (to cross a river).

In the case of a mountain, it is the rule to say "koyu" (to cross); in the case of a river, to say "wataru" (to cross). The use which, notwithstanding this rule, is made by men of the present day in their journals of travel, &c., of such expressions as "nani-gaha wo koshite" (having crossed such and such a river) and the like, is a great error. Except in the case of crossing by fording, writers of the present day do not say "wataru," whereas in ancient times the word "wataru," and no other, was used generally for crossing the sea or river, whether on a bridge or in a boat, or in any manner whatsoever. Again, although in the case of a mountain "koyu" was said, yet even in this case no one said "kosu." Between "koyu" and "kosu" there is the distinction of intransitive and transitive. Still more is it unlikely that there should be such an expression as "kosu" in speaking of rivers.

NOTES.

This extract is from the *Tama no Arare*, a work of the well-known grammarian Motowori Norinaga.

 ${}^{1}Ha$ (pron. wa). It is ha which is translated "in the case of."— ${}^{2}To$ is equivalent to the marks of quotation "."—3Ifu is a noun, nominative to naru.—'Naru. The attributive instead of the conclusive form, because zo occurs previously in the sentence. [See p. 167.]—5Wo "notwithstanding." [See p. 115]—6Kaku, a noun, nominative to nari. ⁷Imishiki, an adjective of the second conjugation in the attributive form, qualifying higakoto. -8 Naradeha, lit. "if it be not," is nara, neg. base of naru, "to be," de, the indeclinable negative particle, and ha, the distinctive or separative particle.—9*Iha-ne-do* is *iha*, negative base of *ifu*, "to say"; ne, perfect of the negative particle nu, and do, the concessive particle.— ^{10}Ha . Note the force of ha in marking the opposition between ima no hito and mukashi.--11 Mare is for mo are, are being the imperative mood of aru, "to be."—12 Sube-te may be translated "generally." It is the adverbial form of the verb *suberu*, "to include," with *te*, the adverbial form of the particle *tsuru*.—¹³*Ihi-tsure*. The perfect is used instead of the conclusive form, because koso occurs previously in the sentence. [See p. 170.]—14 Ihe-do-mo is literally "though one has said," but means here nothing more than "although." Ihe is the perfect form (before do) of the verb ifu "to say."— 15 Iha-zu. Zu is the conclusive form of the negative particle nu.-16 To repeated after koyu and kosu means simply "and."—17 Ji-ta. Ji means "oneself," ta, "another"; ji-ta means here "intransitive and transitive."—18 Mashi is the adverbial form of masu, "to increase"; with te it has an adverbial force, viz., "increasingly," "much more."—19 Ara-me is put here for the perfect future ara-me-ri, [See p. 153.]—20 Ha after an interrogative clause shows that a negative answer is expected. [See p. 122.]

VERSION IN ROMAN LETTERS.

Kono hi mo kureshikaba,¹ Motofuji ha madzu kinjiu ra ni ihitsukete, okumaritaru² kozashiki wo kaki-harahashi,³ tobari wo tarete, shokudai tsukue kôro nando¹ no yôi hayaku mo totonohikereba, "Happiaku bikuni wo yobisamashite, yufu-zen wo susumeyo" to te,⁵ koshimoto ra tsukahaseshi⁵ ni, "kudan no bikuni ha umahi shite, yobedomo yobedomo, samezu" to ifu. Tokaku suru hodo ni kô takete, haya ne no nakaba ni narishikaba, Motofuji iradachi katsu utagahite, midzukara soko ni omomukite, yobi-samasan to seshi¹ hodo ni, Miyôchin yô-yaku nemuri samete, midzu wo kohi, kuchi sosogite, hikarete idete kinikereba, Motofuji ya! ya!³ to yobi-chikadzukete, "Niobosatsu, sudeni kano go ni narinu."

TRANSLATION.

When this sun too had set, Motofuji, in the first place giving orders to the attendants, caused to be swept out a small reception room at the rear of the house, and hung a curtain before the door; and as the preparation of candlesticks, table and censer, &c., was already complete, sent the maid-servants, saying, "Awake the nun Happiaku, and offer her supper." But they said that the nun was in a deep sleep, and that however much they called her, she did not awake. Whilst doing this and that it grew late, and it had become already the middle of the hour of the rat (midnight), so that Motofuji, partly enraged, and partly suspicious, went there in person and attempted to awake her. When he did so, Miyôchin awoke from sleep with difficulty. She asked for water, and having rinsed her mouth came forth led by the hand. Motofuji called her to him, exclaiming, "Come, come, your Holiness! the hour appointed has already arrived."

NOTES.

This passage is taken from the Hakkenden, a romance by the popular

writer Bakin, published in 1834.

¹Kureshikaba, Kure is the adverbial form of kururu "to set," shika, perfect form of past particle shi, and ba, a particle having here the force of "when," "as."—2 Okumaru is a hybrid word, the root oku being Chinese, and the termination Japanese.—³ Harakasu (pron. harawasu) is not the causative proper of harafu which would be harahasuru or harahisasuru. Harahasu means "to make swept out," harahisasuru "to cause some one to sweep out."—4Nando. The n being written in katakana shows that the writer looks upon it as properly not belonging to this word, which is usually written nado. It is possible that nani to from which nando is derived may have first been contracted into nado and the n inserted afterwards for euphony, but it seems more likely that nando is really a transition form between nani to and nado.—5 To to is for to ihite.— Tsukahaseshi. The verb is tsukahasu, and shi, the past participle, is added to the adverbial form. We ought therefore to have had tsukahashishi, but the modern popular language prefers the form ending in seshi. 7 Seshi. It is one of the irregularities of suru that it always adds shi and shika to the negative base instead of to the adverbial form. -8 Ya.' ya! is an interjection. Interjections are usually printed in katakana as here.

TRANSLATION.

The opinions contained in the Memorial hereto annexed which we have the honour to address to you having constantly been held by us, and some of us during our period of office having repeatedly memorialized you on the same subject, an understanding was come to that after the embassy despatched to the allied powers in Europe and America should have observed the actual condition (of affairs) also, steps should be taken after due consideration of the circum-But although several months have elapsed since the return of the embassy to this country, we do not learn that any measures have been adopted. Of late the popular mind has been agitated, and mutual distrust has sprung up between the governors and the governed (lit. the upper and the lower), and a state of things has arrived in which it cannot be denied that there are signs of destruction and ruin being ready to break forth at any moment. The cause of this we profoundly regret to say is, in effect, the suppression of the general opinion of the Empire as ascertained by public discussion.

We trust that you will give this matter due consideration. 17th January, 1874.

SOEJIMA TANEOMI, Samurai of the Saga ken. Gotô Shôjirê, Samurai of the Tôkiô-Fu. Itagaki Taiske, Samurai of the Kôchi ken. Etô Shimpei, Samurai of the Saga ken. Mitsuoka Hachirô, Samurai of the Tsuruga ken. Yuri Kimmasa, Samurai of the Tsuruga ken. KOMURO NOBUO, Samurai of the Miôdô ken. OKAMOTO KENZABURÔ, Samurai of the Kôchi ken. FURUSAWA URÔ, Samurai of the Kôchi ken.

To the Hon'ble Members of the SA-IN.

When we humbly reflect upon the quarter in which the governing power at present lies, we find that it lies not with the Crown (the imperial house) above, nor with the people below but with the officials alone. We do not deny that above the officials respect the Crown, and yet the Crown is gradually losing its prestige (lit. honour and splendour), nor do we deny that below they protect the people, and yet the manifold decrees of government appear in the morning and are changed in the evening, the administration is conducted in an arbitrary manner, rewards and punishments are prompted by partiality, the channel by which the people should communicate with the government is blocked up and they cannot state their grievances. Is it hoped that the Empire can be peacefully ruled in this manner? Even a child three feet high knows that it cannot be done. We fear, therefore, that if this continues, and a reform is not effected, the state will be ruined. Unable to resist the promptings of our patriotic feelings, we have sought a means of rescuing it from this danger, and we find it to consist solely in developing public discussion by the Empire. The only means of developing public discussion is the establishment of a council-chamber chosen by the people. Then a limit will be placed to the power of the officials, and both governors and governed will obtain peace and prosperity. We ask leave, then, to make some remarks on this subject.

The people, whose duty it is to pay taxes to the government, possess the right of sharing in the direction of their government's affairs, and of approving or condemning. This being a principle universally acknowledged, it is not necessary for us to waste words in discussing it. We therefore humbly

pray that the officials will not resist this great truth. Those who now oppose the establishment of a council-chamber chosen by the people say: "Our people are wanting in culture and intelligence, and have not yet advanced into the region of enlightenment. Therefore it must necessarily be too early vet to establish a council-chamber elected by the people." It is our opinion that if it really be as they say, then the way to give to the people culture and intelligence, and to cause them to advance swiftly into the region of enlightenment is to establish a council-chamber chosen by the people. For in order to give our people culture and intelligence and to cause them to advance into the region of enlightenment, they must in the first place be induced to fulfil their duties and protect their rights, to respect and value themselves, and must be inspired with a spirit of sympathy with the griefs and joys of the Empire, which can only be done by giving them a voice in the concerns of the Empire. It has never happened that under such circumstances the people have been content to remain in a backward condition or have been satisfied with want of culture and intelligence. To expect now that they will acquire culture and intelligence by themselves and advance by themselves into the region of enlightenment, is very much like "waiting a hundred years for the water to clear."* The worst argument they put forward is that to establish a council-chamber at once would be simply to assemble all the blockheads in the Empire. What shocking self-conceit and arrogant contempt for the people this indicates! No doubt amongst the officials there are men who surpass others in intelligence and ingenuity, but how do they know that the world does not also contain men who surpass the multitude in learning and knowledge? Wherefore the

^{*} A quotation from the *Tsochuan*. The Yellow river is said to be a muddy stream, but to become clear at intervals of a thousand years. The text says "a hundred," which is no doubt a slip of the pen.

people of the Empire should not be treated with such contempt. Admitting that they deserve to be treated with contempt, are the officials themselves not a part of the nation, in which case they also are wanting in culture and intelligence? Between the arbitrary decisions of a few officials and the general opinion of the people as ascertained by public discussion, where is the balance of wisdom and stupidity? We believe that the intelligence of the officials must have made progress as compared with what it was previous to the Reformation,* for the intelligence and knowledge of human beings increase in proportion as they are exercised. Therefore we have said that to establish a council-chamber chosen by the people would promote the culture and intelligence of the people and cause them to advance rapidly into the region of enlightenment. It is further the duty of a government and the object which it ought to promote in the fulfilment of that duty to enable the people to make progress. Consequently in uncivilized ages, when manners were barbarous, and the people fierce, turbulent, and unaccustomed to obey, it was of course the duty of a government to teach them to obey; but our country is now no longer uncivilized, and the tractableness of our people is already excessive. The object which our government ought therefore now to promote is by the establishment of a council-chamber chosen by the people to arouse in our people a spirit of enterprise, and to enable them to comprehend the duty of participating in the burdens of the Empire and sharing in the direction of its affairs, and then the people of the whole country will be of one mind.

What is it that makes a government strong? It is by the people of the Empire being of one mind. We need not prove this by quoting ancient historical facts. We will show it by the change in our government of October last. How great

^{*} I.e. The restoration of the Mikado's government.

was its peril! What is the reason of our government standing isolated? How many of the people of the Empire rejoiced at or grieved over the change in the government of October last? Not only was there neither grief nor joy on account of it, but eight or nine out of every ten of the people of the Empire were utterly ignorant that it had taken place, and they were only surprised at the disbanding of the troops. The establishment at present of a council chamber chosen by the people will create community of feeling between the government and the people, and they will mutually unite into one body. Then and only then will the country be strong. Then and only then will the government be strong.

We have now investigated the question in the light of universal principles; we have shown the truth in regard to it by reference to the tendencies of the day in this country; we have discussed it in reference to the duties of a government, and have tested it by the case of the change which occurred in our government in October last. Our belief in the justice of our views is strengthened, and we earnestly contend that the only way to maintain and develope the destinies of (lit. to move up) the Empire is to establish a council-chamber chosen by the people and to develope public discussion by the Empire. We will not here enlarge upon the means by which the idea is to be wrought out, as that would occupy too much space.

We are informed that the present officials, under the pretence of being conservative, are generally averse from progress. They call those who advocate reforms "the rash progressists," and oppose them with the two words "too early." We ask leave to make an explanation here.

In the first place we do not comprehend the phrase "rash progression." If by "rash progression" is meant measures which are heedlessly initiated, then it is a council-chamber

chosen by the people which will render them prudent. Do they mean by "rash progression" the want of harmony between the different departments of the government and its consequences, viz., the disturbance, during a period of change, of the sequence of beginning and end, of not urgent and urgent, and the incongruity of this measure with that? The cause of this is the want of a fixed law in the country, and the fact that the officials abandon themselves to the promptings of their own inclinations. These two facts we look upon as precisely a confirmation of the reasons which render it necessary to establish a council-chamber chosen by the people. Progress is the most beautiful thing in the world, and is the law of all things moral and physical. Officials cannot condemn this word "progress": their condemnation must be confined to the word "rash," which has no connexion with a council-chamber chosen by the people.

We are not only simply unable to comprehend what the words "too early" have to do with a council-chamber elected by the people, but our opinion is directly the opposite of this. For if a council-chamber chosen by the people were established to-day, we may fairly suppose that it could not be expected to be in complete working order until months and years had elapsed. We are only afraid therefore of a single day's delay in establishing it, and therefore we say that we hold the opposite of this opinion.

We shall mention another argument of the officials. They say that the council-chambers now existing in European and American States were not formed in one morning or one evening, but were only constituted by gradual progress, and therefore we cannot to-day copy them suddenly. But gradual progress has not been the case of council-chambers only; the same is the case with all branches of learning and science and mechanical art. The reason why foreigners have perfected this only after the lapse of centuries is that no rules existed

previously, and these were all discovered by them for themselves by actual experience. If we now select these rules and adopt them, why should we not be successful in our endeavours? If we are to delay using steam machinery until we have discovered the principles of steam for ourselves, or to wait until we have discovered the principles of electricity before we construct an electric telegraph, our government will be unable to set to work.

Our object in seeking to prove that a council-chamber elected by the people ought to-day to be established in our country, and that the degree of progress amongst the people of this country is sufficient for the establishment of such a council-chamber, is not to prevent the officials from making use of various pretexts for opposing it, but we are animated by the desire that by establishing such a council-chamber public discussion by the Empire may be developed, the duties and rights of the people be established, the spirit of the Empire be roused to activity, the affection between governors and governed be made closer, sovereign and subject be brought to love each other, our imperial country be maintained and its destinies developed, and prosperity and peace be assured to all. We shall esteem ourselves fortunate if you will adopt our suggestions.

Notes.

¹ Soregashi ra, "certain persons," "we." ² Tatematsuri is written in the Chinese order before the noun which it governs.—³ Ni is not written, but must be supplied in reading.—⁴ Oyobi is also written before its noun.
—⁵ Tokoro is something like "whereas." It is represented in the translation by the ing of "having."—⁶ Yô-bei. Yô, the first syllable of Yôropa, Europe: bei is for me, the second syllable of America.—⁻ Mo. Not only the arguments of the memorialists, but actual observation on the spot "also."—⁶ Ahi has little meaning here.—⁶ Kore is inserted before ari in imitation of Chinese construction. It is superfluous.—¹⁰ Shikaru ni, lit. "in its being so," i.e. "although this was so."—¹¹ Safurahedomo, pronounced sôraedomo.—¹² Mafushi-gataki. This compound is written in

the Chinese order.—13 Gi, "matter." This word is qualified by the whole passage from sakkon on.—14 Itari, "matter," lit. "go."—15 Togerarubeku. Togeraru is the conclusive of the passive (used as a honorific) of the verb "togeru," "to complete."—16 Furusaha Urô, &c. The signatures are in the opposite order to what we should expect, the most honourable position being in Japanese that next the name of the person addressed. Furusaha, although his name occupies the least honourable place, is believed to be the actual writer of this Memorial.—17 The Sa-in is no longer in existence. It was a board associated with the Council of State. One of its duties was to examine all memorials presented to the Government.—¹⁸ Shin ra, "your servants," "we," only used in addressing the Government.—¹⁹ Fushite, lit. "with the face to the ground."—²⁰ Sore is superfluous. It is inserted in imitation of a Chinese construction. -21 Aratamezu is conditional. The omission of ba is characteristic of the semi-Chinese style.—22 Nomi at the end of a sentence is an imitation of Chinese.—23 Haru, lit. "to stretch."—24 Kofu. In ordinary Japanese this verb would be at the end of the sentence instead of at the beginning. -25 Tenka sometimes means "Japan" only; sometimes, as here, "the universe."—26 Matazaru, for matazu aru, "does not wait for," i.e., "does not require."—27 Hisoka ni, "privately," hence "humbly." This application of hisoka ni is in imitation of Chinese, where the character corresponding to this word has also this secondary meaning.—28 Koto wo. Koto is governed by the verb negafu which precedes it. This is a Chinese construction.—29 Fugaku muchi. Supply ni te after these words. -30 Tatsuru is a noun ("the establishment") nominative to hayakarubeshi. In proper Japanese tatsuru would have some particle, as no or ha, added to it to show that it is a noun. The semi-Chinese style, however, rejects particles as far as possible.—31 Omoheraku is omoheru, perfect of omofu and aku, a termination which gives the verb the force of a noun. Shin ra omoheraku, "our opinion (is that)."-32 Ifu tokoro, "that which they say." Tokoro is here the relative.—23 Nani to nareba. "Because it is what?" i.e. "for what reason?"—34 Waga jimmin wo shite. Shite is altogether superfluous.— 35 Su. By a Chinese construction for the hypothetical seba.—36 Seshime. Causative of suru, "to do," "to make." -37 Kore wo shite. Shite is again superfluous. It adds nothing to the sense, is unnecessary for the grammar, and is only inserted in blind imitation of Chinese.—38 Kaku no gotoku. The Chinese characters for these two words are written in the reverse order to that in which they are read.—39 Arazaru nari. A circumlocution for arazu.—40 Hanahadashiki ha. "The worst is.....to ifu ni itaru, that they proceed to say."—41 Ha

nahadashiku. Adverbial form, the sentence not ending till betzujo taruya.—42 Betsujo taru ya. Ya is an interjection merely. Taru is in the attributive form, owing to the sentence containing the interrogative nanzo. -43 Yo, for yo ni or yo no naka ni.-44 Shiran ya. Ya is here the interrogative particle.—⁴⁵ Nani to nareba.....nareba nari. "Because of what is it? It is because....."—46 Michi nari to. To is joined with ihaku two lines back.—47 Eschimuru, E is the root of uru, "to get," and seshimuru the causative of suru, "to do." - 48 Ni ari. Ni is often, as here, the sign of the predicate of a proposition.—⁴⁹ Shitagafu tokoro. "Where to be obedient."—50 Shirashimuru, causative of shiru, "to know."—51 Mono in the semi-Chinese style is often equivalent to the particle ha of proper Japanese.—52 Su, conclusive form of suru, "to make," "to account." -53 Immin wo shite, equivalent to immin ni of proper Japanese. -54 Ikubaku ka aru. Aru, the attributive, instead of ari, the conclusive, owing to the interrogative which precedes.—55 Jiu no shite. Shite would be omitted in proper Japanese.—⁵⁶ Nomi, a Japanese word, is written with the two Chinese characters The E.-57 Mochite, 'by this means.' -58 Kôgi wo haru ni aru nomi to. To refers back to setsu ni ifu.-59 Hôhô $t\delta$. $T\delta$ marks the plural.—⁶⁰ Gotoki properly means "such matters as," but in the semi-Chinese style it has often very little meaning. It has been entirely omitted in the translation.—⁶¹ fiu-su-mai-shi. "More than ten sheets of paper."—62 Hisoka ni, "secretly," must not be understood too literally. It merely means that they have heard from some one whom it is unnecessary to name.—63 Shinra kofu. The Japanese construction would be shinra mata kore wo benzen koto wo kofu.—64 Mono would be ha in proper Japanese.—65 Teichô ni suru tokoro no mono, "a thing which renders prudent." *Tokoro* is here a relative.—66 *Mochite* is here superfluous.—67 Tatezunba arubekarazu. Tatezunba. N is inserted euphony. It is pronounced m. This phrase is equivalent to the colloquial tateneba naranu, "must erect or establish."—68 Sono tsumi suru tokoro. "That which they blame."—69 Tatsuru ni okeru. Okeru would be ni oite or ni tsuite in ordinary Japanese.—70 Ikan (for ikani) to nareba, See above, nani to nareba.—71 Tatsuru mo would be in ordinary Japanese tatsu to ihedomo, or in the spoken language, tatetemo,-72 Sono qualifies kisuru. "Its attaining perfection."—73Mo-suru wo ezu. "We do not get the imitating," i.e., "We are unable to imitate."—⁷⁴Ani is placed at the beginning of an interrogative clause and shows that a negative answer is expected.—75 Suhiaku nen no hisashiki wo tsumite. "Accumulating the length of several hundred years."—76 Itaseshi mono ha.....nareba nari. "Their having done this.....is because".....Mono is superfluous.—⁷⁷Kuwadate-oyobu-bek'-ara-z'-ara-n-ya. Endeavour-reach-should-be-not-be-fut.-interrog.—⁷⁸Ubeku, conclusive form of uru, "to get," "obtain," "be able," and beku, adverbial form of beki, "should."—⁷⁹ Shika shite and shikau shite (pron. shikô shite) are the same, the u being inserted for euphony.—⁸⁰ Oyobi, "and."—⁸¹Benron suru mono ha. "The reason why we maintain." Mono is nominative to nari at the end of the sentence.—⁸²Mochite. "By means of all these."

TRANSLATION.

I have the honour to address you a letter. A difference having arisen between the views of our Government and that of China in respect to the matter of the chastisement of the savages of the barbarous part of Formosa, there was a hitch in the negotiations, and they at last reached a position in which the preservation of friendly relations was impossible. His Excellency the honourable country's Minister Plenipotentiary resident at Pekin then used his good offices between our High Commissioner and their high officials. An agreement

was thus brought about and articles mutually exchanged as in the enclosure.

Our High Commissioner sent an officer back to Japan with this intelligence. This officer arrived yesterday and has made his report to me to-day. I therefore place it (the agreement) in your hands for your private perusal.

I am sensible that no small exertion has been made by His Excellency your honourable Minister before-mentioned in arriving at a result in which the views of this Government have gained acceptance, and which is fortunate for bot countries. I accordingly hasten to offer to you this expression of thanks, which I beg you will be good enough to convey in a suitable manner to the honourable Government and to the honourable Minister at Pekin.

I wish to offer the above thanks. Thus it is.

With respect.

November 12th, 1874.

TERASHIMA MUNENORI,
Minister for Foreign Affairs.

To His Excellency Sir HARRY S. PARKES,

Envoy Extraordinary and Minister Plenipotentiary of Great Britain.

Notes.

This is a specimen of the style of official letters.

¹Shokan wo mochite. Wo is not written, but is always supplied in reading. Mochite is pronounced motte. In writing this phrase, the Chinese order of the characters is followed, that for mochite coming first.—² Shikareba, lit. "this being so." To shikareba inclusive may be freely rendered "I have the honour to inform you that—."—³ Taiwan banchi is for Taiwan no banchi.—⁴ Seikoku. Sei, in Chinese Tsing, is properly the name of the Manchu dynasty of Emperors of China. Seikoku is the ordinary word for China in official correspondence.—⁵ Shôji, adverbial form of shôzuru, from shô, "producing," and suru, "to do."—⁶ Ukketsu. After ukketsu must be understood shite. The constant omission of unimportant words and particles is characteristic of the semi-Chinese style.

— Tachi has little meaning here.— **Hokkin. Ni must be understood after Hokkin.— **Kikoku. "The honourable country," i.e., your country.— 10 Sho daijin. Sho marks the plural.— 11 Kore ari. Kore is superfluous in Japanese: it is introduced in imitation of the Chinese construction.— 12 Kichô, "return to court," i.e., to Japan.— 13 Seshime. Adverbial form of seshimuru, the causative of suru, "to do." The character for this word is placed Chinese-fashion before the noun which it governs.— 14 Riôgoku. Goku is for koku, "country."— 15 Migi, "the right," corresponds to "the above mentioned," Japanese being written from right to left.— 16 Sukunakarazaru, i.e., sukunaku ara-zu aru is represented by the two characters \tak{K}, the first of which represents zu, and the other the remainder.

—17 Kikôshi, "the honourable minister," i.e., your country's minister.

Hachigwatsu nanoka.

Matsuda Keizô.

Takenaka Riôsuke sama Kika,

TRANSLATION.

I address you a stroke of the pen.

I am grateful for your extreme kindness in entertaining me so courteously when I visited your residence yesterday, and especially for having invited my son also. Further, I feel that your conversation at our long interview is matter for thankfulness. I beg now to send you the originals of the papers on the rearing of plants and trees which I then spoke to you of, and hope you will peruse them. I am extremely sorry that those I brought yesterday were the wrong papers.

In haste. Please take note of the above. Thus it is.

With respect.

August 7th.

Matsuda Keizô.

To TAKENAKA RIÔSUKE, Esq.

Notes.

This is a specimen of the ordinary style of a private letter. The version in the current hand is a facsimile of the original, the version in square character being added for the sake of comparison.

¹ Ippitsu, for ichi hitsu, "one pen." Almost all Japanese letters begin by this or one of the numerous phrases of similar meaning, and go on with shikareba, "this being so," &c.—² Sankan. The construction here is very elliptical. The full construction would be sankan no toki go teinei no kiôô wo uke.—³ Jô. See p. 78.—⁴ Kii etaku, kaku no gotoku. In writing these phrases, the Chinese order of the characters is followed.
